

Jacques Ravatin

Solution: From quantum to Easter Island via Cheops...

I make a point of specifying that there is no line nor the slightest word concerning Louksor and the work of Schwaller de Lubicz in the work of Jacques Ravatin (to our knowledge). To understand the Secret Mysteries of the different characters presented,

<https://web.archive.org/web/200614193516/http://templedelhomme.fr/jacques-ravatin-deuxieme-partie/>> refer here.

What fascinated me in the work of Jacques Ravatin can be summed up in this sentence: "And you have to be convinced that removing certain words from his language (which does not mean knowing nothing or inventing anything) is not an operation of impoverishment but that, on the contrary, this prudence is a necessity to get out of the usual thought and to build a dynamic thought"; Alas in a world where therapeutic commodification is in full swing, we cannot prevent people from rushing to this kind of method filled with enticing promises, both from a symbolic and vibrational point of view, which alas gives nothing, except with a homeostasis of the psychic and emotional body!

Malheureusement, des thérapeutes un peu pressés», font un mélange de cette technique -à 16 gestes qui sont en correspondance hiérarchique avec, en particulier, les 16 tétragrammes chinois 110| avec l'ostéopathie, l'acupuncture, la kinésiothérapie, l'anthroposophie, etc et ils ne savent absolument plus ce qu'ils manipulent; le patient peut en ressentir des états destructeurs. Ce qui est assez surprenant, c'est qu'au début de l'application d'un tel fouillis de thérapies, cela semble fonctionner ; puis peu à peu à partir de 2 à 3 ans de pratique, la qualité du soin décroît. Le thérapeute, lui, tranquillement continue sa thérapie. Il ne se remet pas en cause dans la manière dont il a pu assimiler, comprendre, appliquer des méthodes correspondant pour la plupart à des représentations différentes. Il aurait fallu qu'il rentre dans ces représentations - la plupart du temps, il n'en a même pas conscience - qu'il les assemble avant d'assembler les différentes approches.

Page 131: "Development around Forms and Fields of Coherence Volume 1", illustrations by Doctor

Calligaris

All those who are not yet subservient to a guru and a strong personality, even charismatic, will be able to recognize the perfect analogy between the illustrations of the book of the plot and the work presented by Jacques Ravatin presented by Doctor Calligaris! We are not saying that Mr. Burensteinas copied the plot from the work of Doctor Calligaris but that he too is trapped in a plot other than his own, which is not the one

he thinks he invented from ail parts, inspired by illusory forces, contrary to tradition, which René Guénon called "The counter-initiation" and Jean-Gaston Bardet "Magico

Luciferian".

Why talk about him again? Quite simply because this gentleman is very well known and touches many people who know nothing about this field and come here out of sheer ignorance and naivety! It is therefore to them that I address myself above ail, out of benevolence and total intellectual and spiritual honesty. To be more charitable with Mr.

the guru Patrick Burensteinas, we can grant him to have captured in the morphogenetic field of Rupert Sheldrake the frame. Which amounts to the same result anyway, this method having been infused by a morphogenetic field, distorted by a total lack of knowledge and an alchemical and Hebrew bloubilbulga, which has influence only thanks to the egregore and the fields which compose it and in no way of the capacities of the therapists who follow this training!

"The mimetor is devoured by innumerable figures"

Paul Valéry

Is the die thrown the manifestation of the will of the Gods or the effect of chance? The fourteen Geese of the full Moon will provide the answer to who plays the Game. I am not one of those who, nostalgically, look to the past as the golden age. Let's listen to Marco Polo returning to Venice after his trip to the Far East, and telling his elderly father that he was ready to take over the glass workshop. The latter answered him something like this: "You know my son, you have been gone a long time;

workers no longer work as they used to. We were at the beginning of the thirteenth century.

Everyone knows the story of Newton and the apple as the origin of his theory of gravity. But who knows that, by his own admission, Newton drew arrows "because he did not know how to draw angels", that he presented his theory as a technique for measuring the action of spirits by analyzing an observable correlation in matter, and not as a causal explanation? Who is aware of his immense work in Alchemy? For almost a century, we have been trying to unify under the comforting mantle of Reason, under the protective shield of culture, the laws of physics (quantum physics and general relativity). And always the same conclusion is necessary: Four dimensions are insufficient to explain the universe.

To solve this incongruity, from our little ego, hop: string theory (ten or eleven dimensions) arrives in the conceptual field, and the quantum slowly takes its place in the general scientific field in our time and in the spiritualo thingy courses.

-thingy-thing...!

Let's first go into the thought of Jacques Ravatin:

"The mind is completely deiocalized; it is linked to the global" J a cques Ra va tin

"When we speak of the body, it is the localized being that we are considering. Thus he is in the local" Présent and insituable moment for Schwaller de Lubicz

EASTER ISLAND

Here is the wonderful work done by Jean de LA FOYE, friend with Jean-Gaston Bardet, on Easter

Island:

"aligncenter" src="http://letempledelhomme.fr/wp-content/uploads/2015/09/jeandelafoye_4.jpg" alt="http://letempledelhomme.fr/wp-content/uploads/2015/09/jeandelafoye_4.jpg" width="1000" height="1000" style="height: auto; width: 100%;"/> />

We no longer give précis  references so that

everyone makes a little effort to find the work in question on their own, so as not to increase the galloping intellectual laziness linked to the Internet and the god Google, which replaces the effort of real research! This immediately brings us back to the famous Magic or rather to the usual inversion, which nobody knows anymore (alas). **The loving heart needs no magic or statues to be a natural ray of spirit,** in the language that Mr.

Jacques Ravatin has created from scratch to untie the far too tight corset of exotericism, which no one understood from him (alas for his work). He told me himself on the phone a few years before he left for the great light (I should do like him, sometimes I suffocate).

He classifies the statues of Easter Island in the Idathemus:

*Das Weltenet, spirahg umwunden von einer
ScNange. die hier die Zen symbolisiert DarsteUung
hx J. Bryani Anotysis of Anoent MyiMogy. 1774*

"<http://letempledelhomme.fr/wp-content/uploads/2015/09/ophis.png>"

style="height: auto; width: 100%;" />It is a term for Ravatin linked to the global, therefore delocalized, but linked to a form here. It is here and at the same time there, so it does not really exist in our field, except by its représentation here. The Pascuans (inhabitant of Easter isiland) fetch an egg from the sea once a year, caught on a rock and brought back. The egg becomes an Idatheme, it is relocated! This brings us back to our Easter egg festival and its western religious and alchemical symbolism. Why find it in such a distant région...? It would be necessary to know the exact date of this ceremony, in order to see if it corresponds to a "présent moment" or to a "cosmic influence". Don't worry, I wouldn't organize an initiatory trip to Easter isiland. This is completely useiess, since we can by vibratory "chrono-transfer"

bring it here. This requires real in-depth work on the different aspects of Ancient Magic! And not magic Kinder eggs sold by people who refuse ali inteiiectual work other than their own...

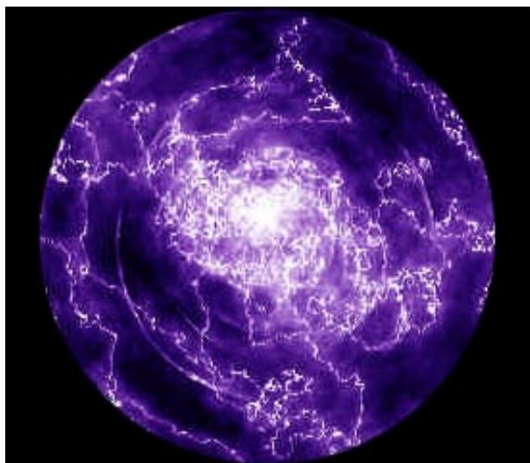

RAVATINIAN PRACTICE:

HOW TO CREATE A QUANTUM FIELD THROUGH THOUGHT

In order for the work to become effective, we must clearly understand that there must be no separation within ourselves between "objective" and "subjective." The fact of thinking "objective" is enough to inhibit access to the quantum universe. We thus break the quantum field to fall into the usual room (our space-time). The ancients used a different way of thinking than ours. Their doctrines were not Cartesian, and the functionalities were delocalized via a different mode of mental

representation. The universe is not given a priori. The human being is immersed in it! We must understand the Universe as a return to the thought that the human being must place in his field of coherence. He applies it, at the same time as he finds himself within. UFOs are manifestations outside coherence fields (non-local) to allow human beings to transform their own coherence fields. The pyramid of Cheops, with all its procession of theories on its construction, is an indication bequeathed by the ancients. It allows us to modify our representation of reality: not by explaining it, but by modifying it. Quite simply by inviting us to note that we cannot find a "coherent" explanation. By this very subtle means, we create, without our knowledge, a "quantum field" which escapes reality. Take the example of the Cosmos. Counting the stars, in a set of nearest stars, is not enough to lead us to the concept of the Cosmos. Because, whatever the route chosen to count them, this finite set does not give us an account of the infinite set of the Cosmos. However, if we put in dynamic duality the star entity with its whole, we obtain the dynamism. And then the Cosmos entity appears. Here, the dynamism is the egregore, or the energy given off by the cosmos. Between the element (the star) and the whole, we then create by thought, a third representation which we will call "quantum

representation". Thus, by a completely logical way of thinking, we have just constructed the "quantum representation", therefore the star of the Cosmos.

"<http://letempledelhomme.fr/wp-content/uploads/2015/09/spirale.jpg>"

style="height: auto; width: 100%;" />The quantum representation is delocalized. The cosmos is absolutely different from all the stars which are identifiable (they are quantifiable, distinct by their shapes, their dimensions, their heats). However, offshoring, that is to say an absence of parameters, implies that it cannot be total. For example: the Philosopher's Stone (a stage in the art of Alchemy) is roughly located in space. For other parameters related to chemical reactions, it is not; it can behave like an inert body, as if it

were

absent.

OBSTACLES TO THIS WAY OF

THINKING

A "representation" imposes a mental and psychic coherence. It imposes by itself a field of coherence. Thus, an overly active

definition of this field of coherence (therefore of our representation), can lead to a break even in this field. This is the "Quantum"

failure. The created field of mental and psychic coherence obliges the human being to plan. Thus, it creates time, and it is still the "Quantum" failure. In a psychic mental representation, the human being tends to merge into this representation by identification. It is not so much the action of merging which is serious, it is the spirit in which it is merging (here the Cosmos).

He therefore loses the possibility of becoming aware of the field he has created. And it's Quantum failure

again.

At the beginning of the mental and psychic

representation, the field is in agreement with us. But as time goes by, inconsistencies creep into our mental and psychic field, and it is once again "quantum collapse". In the mental and psychic representation, we unconsciously want to be rational, the individual is led to play the game of pseudo scientific objectivity: we want to align our personal values, compare the results. The pseudo-objectivity, in this possibility of construction, suggests multiple scales of comparison. All of this is

arbitrary.

"<http://letempledelhomme.fr/wp-content/uploads/2015/09/contact.jpg>"

style="height: auto; width: 100%;" />

To shed light on the complexity of the work presented here by Jacques Ravatin, it is necessary to assimilate and put into practice the work of Schwaller de Lubicz: “ **Abandon all dialectics and follow the path of the Powers; become aware of the innate functions and become functional Consciousness** ”. Schwaller's

Lubicz

Jacques Grimault told us in his calculations that the distance between Gizeh and Easter Island was worth 10,000 times the golden ratio. This information was given by Mr.

Dupuy-Pacherand here who initiated it, he did not find it by himself as he claims everywhere.

<https://web.archive.org/web/20160614075516/https://www.facebook.com/pages/How-From-10000-Golden-Ratio-to-Easter-Island/601873406626221>> See: Tribute
to the work of François Dupuis from
Pacherand

If we take as a point the center of the pyramid and the center of the triangle formed by Easter Island, we arrive at a dimension of 16180.2km. (golden number =

1.61803).

We will immediately reveal the meaning of this perfect distance between the Golden ratio and Easter Island. The number of Gold is a number which has a vital functional power, therefore in connection with the human body. The statues of Easter Island are precisely a representation of the modified human body, a body found in the temple of Louksor. It is therefore a question of being able to connect with the Pyramid of Cheops (not Louksor), which is only of Magical character, therefore Psychic, or Psyche, Greek word translated by "soul"!

This clearly explains the discovery by Jean de LA FOYE that the statues of Easter Island are of a Magical character and not spiritual (Pneuma). There is therefore a perfect ANALOGY between the distance of the GOLDEN number and the work of Schwaller de Lubicz, who attributes a "VITALIST" character to it, therefore functional, which allowed our friends from Easter Island to use ONLY ORGANIC AND BODILY! We will not go any further into the method and the putting into practice of this "function" of the statues of Easter Island.

"But the most important and also the most difficult study is that of numbers from a metaphysical point of view. It follows that the science of numbers, the most marvelous guide through the constant creation of the universe, remains a vast hypothesis, as long as its use has not awakened in us the higher consciousness which normally still eludes us and that, by deeper knowledge of things and of their becoming, we will not have come to recognize the Numbers as being a truth, that we will not have experienced by our senses that the living relation of a cause to its effect is truer, more real than the effect can be". Schwaller de Lubicz

"Numbers are mystical powers and not

arithmetical or kilometric additions. »Williams Quenoy

To understand the function of the golden number between Easter Island and the pyramid of Cheops, we must put ourselves in the Egyptian Pharaonic thought (which is not

"st">Egyptian but of universal character) and take into account the modus operandi given by Schwaller de Lubicz on numbers:

- Unity dualist, appearance of 36, maintaining of the nature It a unity of power immanent in the therefore internal function, the Unity. a This is the Heliopolitan revelation.
- What, in relation the thing, is still nothing must become something, therefore must become something, therefore must become a Ternary, since the we find this ternary as a ultimate result of analysis. This is the Memphite revelation.
- What results from the activity must be that is Two, to say of principle is the multiple since multiplication and everything is maintained by this principle, therefore it is question of only of quality but of not not a pure a form, a quantified quality. This is the Hermopolitan revelation. Therefore the result must be the time at same revelation of what is: a) arithmetic: a quantitative relation of things to one another, b) geometric: the growth function of the thing in itself. This is the

Theban revelation. These affirmations are functional, they have universal vital character. Their application Numbers or expression by the encourages regard these to us as denominators of acting powers and arithmetic as not as

values. The proportions derive from this but not are

| causal.

I hope that our readers will be aware that this work of synthesis has never been carried out between all these authors, which gives them a power and an active spiritual efficiency. We do not give the detailed work to be done to apply it, so that the gurus and Dark Mages do not appropriate it for mercantile purposes only. You can learn about it directly with me by consulting the "Secret Chamber".

Yours sincerely, Williams

Quenoy
