Thanks

I want to express my thanks to those who with their love and support contributed to the Realization of this work: My colleague María Aparecida Guerrero (Cida), João Cafarelli and my wife María de Fátima Mora.

To David V. Tansley, whose work changed my life.

The chapters Hydrospinal dowsing and Geobiology, are mostly fruits of the precious collaboration of the geologist Marcos Alves de Almeida. Marcos, is a remarkable example of efficiency of dowsing, when practiced by someone with enthusiasm and knowledge.

He is currently engaged in water research, pointing to large industries in the country, Wells of water the depths varied from 100 to 200 meters.

The origins

The dowsing seems to be as old as the need of man to discover that which is hidden. So much is he that he created oracular techniques based on the most different principles to make explicit, visible, tangible the answers to their various questions.

The downturn was until the beginning of the 20th century considered as another form of fortune telling.

Explorers discovered, grossly sculpted in caverns of the Pireneus, evidence of a practice that allowed hunters from the prehistoric era to paralyze, hunting to be able to quickly capture it more easily. To achieve that end, they designed on the walls of its subterranean rooms the shape of the animal previously sighted in one of its hunts and a stylized hand, usually placed on the flank of the animal, which marked the win and the force of man over his prey. Then, during magic sections, they traced wounds on these drawings, thus killing the animal in effigy, to make sure that, on the day of the hunt, the animal previously delighted would be captured in fact. The prehistoric man had already perceived the possibility of capturing and transmitting energy through distance through simple practices. We know that all living bodies vibrate and emit waves; these infinitely small radiations they are still at the origin of the principle of life. Both radiesthesia and some other techniques are based on the human ability to capture waves, vibrations and, in certain circumstances sustain them and even emit them remotely.

To tune the animal, prehistoric hunters

They used an instrument known as a "control rod". That rod was simply a pendulum with the particularity of having engraved on their side drawings of animals. Generally built in wood or reindeer bone, the command rod was a detector-testimony perfect for animal hunting. From straight or curved shape, bored at the top, for passage of a cylindrical support in wood or bone (rod that the man took horizontally for each one of the extremities), the pendulum rod turned to the return of that support by the law of sustained waves, using the hand of the other arm as an antenna, capturing the radiation-reindeer, command stick and this to whatever distance the animal was. For tune another animal, it was enough for the hunter to eliminate his brain all the animals recorded on the rod, for to fix on that one that would be object of its desire; is what which is called mental selection. The development of the ability of a good mental selection will lead you, a reader interested in the practice of dowsing, to the final condition of "Radiesthesist".

10

The Chinese already used the two thousandth downswing years before our era. A low-relief of wood of 147 BC represents the Chinese emperor You la-Yu of the Hsia dynasty, in 2205 BC, who had the reputation of being one of the biggest, prospectors of water of antiquity, taking an instrument similar with a tuning fork. The legend that accompany the figure tells us the following: "Yu, from the Hsia dynasty, was famous for his knowledge on underground streams and water sources; He also knew the Yin principle and, if necessary, built dams "

Formerly, the Chinese believed that water ran under the earth were the "veins of the dragon." The hidden veins of water served, as well as blood in animals, to remove impurities from the body from the earth, considered 11 not as a pile of rocks, but as a living being. The system Earth's circulatory system was also served by a network of perpetual streams in the atmosphere. The notion of a greater connection between the earth and the creatures that live in it, due to the fields of energy that are common to them, it was better accepted and understood in antiquity in western cultures how much in oriental cultures. Today We can see a resumption of interest in such questions. All those old concepts were practically banished from Chinese culture by the Cultural Revolution perpetrated by Mao Tse-Tung, but curiously, from the 90s, they were

rediscovered in the West and you immediately accept both for its quality and esoteric delicacies. Them Give Feng Shui !.

In Egypt were discovered objects that present a remarkable resemblance to the pendulums used on days from today; even one of them gave rise to the one who is known today as an Egyptian Pendulum. In the first author's book of Chaumery and Belizal, the authors develop a whole theory about the use of dowsing by the Egyptians, which will be object of a more detailed explanation in a chapter of this book.

The Romans used a rod-shaped stick called lituus, as an instrument of fortune telling. And the fork-shaped rod, obtained from a branch of a tree, called a virgin Divine was commonly used for the practice of dowsing. During the invasions

eleven

Romans, the legions were preceded by rod bearers whose mission was to find the groundwater necessary for the consumption of the troops. It was in this way that the Romans they left scattered by Europe thermal sources found when of the search of water potable.

From the end of the Roman Empire until the beginning of the Middle Ages, no references are found how much to practice radiesthesia. In 1518, Luther condemned the use of the dowsing rod by believe that she serves as an intermediary for an illicit relationship with the devil. In a recipe book magical French entitled The Red Dragon of 1521 we find the first recipe to prepare a dowsing rod: "The moment the sun rises on the horizon, hold your hand left a virgin rod of wild walnut and with the right to cut with three strokes, while you will pronounce the following: "I recommend you, or great Adonai, Elohim, Ariel and Jehovah, to give to this varies the strength and virtue of the rod of Jacob, of Moses and of the great Joshua ... ".

Nowadays, things are much easier. Just go to a store and buy a rod; Ugh, what a relief !!

In 1521, the supposed Benedictine monk Basile Valentin, in the play The Triumphal Car of Antimony, lists seven grades of rods that miners Austrians used to discover the deposits of coal or minerals. According to Valentin, the rod it was for them such a precious instrument that it was kept constantly imprisoned in the belt or in the hat. The book De Re Metalica, from German Georgius Agricola, published in 1556, makes the inventory of the use of radiesthetic rods for prospection: the veleira for silver, ash for the copper, black spruce for lead and tin and, even, the iron rod for the investigation of gold and silver.

The story of the Beausoleil couple

Born with the name of Martine de Bertereau, the future wife of Jean de Chastelet, Baron of Beausoleil and Auffenbach, before the age of 20 he already spoke three languages correctly. After the wedding and by force of the professional interests of the husband specialist in mineralogy and mines, it becomes one of the brightest radiesthesists known. The year following the wedding, the Baron de Beausoleil was invited by Pierre de Beringhen, the first squire of the king of France, Enrique VI, for which he also carried out the activity of general controller of the mines, to know the concessions of mines that Beringhen had acquired in the south of France thanks to your relationships in court. Once this work was done, the Baron and his young wife They undertake, as mine advisers, a trip to Germany, Silésia, Moravia, Poland, Switzerland, Italy, Spain. Scotland and England. The Baron was also general commissioner of mines in the Tyrol and in Trento for the Austrian archduke Leopoldo and mine counselor for the Holy See in the papal states. In 1626 he was again called to France, this time by Antoine de Ruzé.

Marquis d'Effiat, superintendent of mines and metalliferous deposits in the reign of Luis XIII. and in charge of exploring the kingdom from north to south in mineral research. In this entrepreneurship, both the Baron and his wife used dowsing in the uprising the deposits, using for that a complicated instrumental composed of scales, Astrolabes and radiesthetic rods.

Leading a team of sixty miners recruited in Germany and Hungary, the couple spent one year in the Languedoc and Provence regions, where they found more than forty mines, the same time they write a strange treatise: *Explanation of True Philosophy Related to the Raw Material of Minerals*, a mixture of alchemy, astrological recipes and prospection of metalliferous deposits. That treaty describes the instruments then used in the investigations, in addition to curiosities like compass of seven angles, mineral astrolabe etc.

We also find references the rabadomance rods, each carrying a symbol astrological related to the investigated metal: rod with symbol of Mars to look for iron, with Venus symbol for copper etc. The couple leaves for the duchy of the Bretagne, where The first time your work encounters strong opposition. The moment they leave for To examine a mine in the Buisson-Rochemares forest, your personal assets are confiscated by workers of the province who, under the pretext that the couple used black magic in their work, they will retain 100 thousand silver shields, precious stones and an important collection of samples minerals, reports and detailed maps of the mines that they had prospected managed to convince the authorities that the official mission that the crown of France had commissioned did not contain in any way a pact with the devil, they never got that the dishonest operatives were punished and their goods restored.

Despite the absolute success of their work and the immense expenses maintained at their own expenses, until then the crown had not rewarded them in any way. The Baroness then sent a memorandum to the superintendent of mines, linking all the work compliment. The reward request was immediately answered with the attribution of a new mission on the part of the successor of the Marquês de d'Effiat, accompanied by the recognition of the work that the couple had done with "so much affection and diligence". beautiful words unfortunately not accompanied by the minimum sum of money for the reimbursement of the astronomical amount of 600 thousand escudos dispensed by the couple, not even by the promise of a salary. Y above the Beausoleil couple's hope of being able to explore their own concessions of

minerals vanishes when a king counselor who had drafted the documents for validating the authorization suddenly resigns from its functions.

In desperation, the Baroness prepares a long report called The Restitution of Pluto that It relates in detail all the discoveries made by the couple between the years 1602 and 1640. This time the letter was addressed to the Prime Minister "The Cardinal Eminentissimo, Duke of Richelieu," a man a cunning and sick impiety. In that document, Martine de Beausoleil, affirms that they had not come to France to learn to work or

13

only for the need of money and that, for nine long years, they had traveled to supply the court of France irrefutable evidence of its underground treasures, referring to more than 150 mines discovered throughout France. also he claimed that they had been discovered thanks the use of the fork of wood or metal, and that this was already successfully used well before XVII century. *"The ancients, to find sources, wells or tributaries were served from the first outbreak bifurcated hazel, which, by a hidden virtue inclines and down on the premises where They find water sources and metals on earth "*.

Baroness's plea was answered by Richelieu ordered his prison along with one of his daughters, in the castle of Vincennes, then used as a prison. Baron de Beausoleil, jailed the same day he was transferred to the Bastille, used for the first time not to common for people convicted but taken as dangerous to state security or King. When one of his sons tried to visit him, he was also imprisoned. The couple, Separately, he spent the rest of his days behind bars.

Nearly 150 years after the story of Beausoleil, a curious series of events They came to fill the dowsing folklore practice. A businessman and his wife were Facon beaten to death of buried in his wine cellar in the city of Lyon. The Authorities are with a broken coffer, in which 130 were missing shields and 8 louis gold and silver belt; They understand that robbery was the origin of the crime, but fail find a trace of the thieves. Population, fearful that the murderers released could act again, press the authorities, who, not knowing what to do, they accept Suggested seek help from a rich peasant could find the culprits thanks to a mysterious power. The king's attorney then made Jacques Aymar Vernay come from his village home to Lyon. A session begins at the premises of the chacina; to everyone's surprise, the man bag pulls a hairpin wooden jacket, wields and starts walking pela cava perspiring and trembling enough; the fork moves in her hands on two local, those where victims lay dead. Always rod laughed, Jacques Aymar part by Lyon streets leading behind him a group of curious, almost trotting; he finally opposite one of the city gates giving access to a bridge over the Rhone, closed Under the late hour.

The next morning, accompanied by three police officers, Aymar crosses the bridge and walk along the river to always guided by indications from the fork. Passing in front of the house a horticulturist, Aymar doubt an instant to immediately enter the door; watching one empty wine bottle on the table, take it and places it under the right foot. the rod dowsing suddenly dives towards the bottle and has the same reaction when he passes over the table and three chairs around it. Aymar concludes that the fugitives were three that They had stopped there to take a liter of wine.

Once interrogated, the two sons Horticulturist confessed that three men had come the day before, they had drunk the bottle of wine to immediately disappear quickly quickly in the direction of the river.

Taking up the track, they are brought to the small town of Beaucaire; always guided by the rod come to the door of the local prison. They are then presented to thirteen men recently apprehended; the rod is manifested in front of a hunchback I lit one hour before a small theft. Aymar said that the suspect was involved in the crime, but not It has been one of the main players. The hunchback is brought to Lyon, where he never says have been. But reconstituting the way to the house of the crime, he was being recognized by people and finally confesses to having been paid by murderers for help transporting stolen goods. This confession stimulates the prosecutor to give order to the Aymar I continue their search, this made assisted by a group of archers. The armed group arrives then to Toulon, where Aymar discovers that the fugitives had dinner at a shelter for the next day, embark for Genoa in Italy. As the group did not have authorization to spend the border, persecution end there.

In Lyon, the hunchback was convicted by a jury of 32 judges to the torture of the wheel and the sentence was read publicly in the cellar where the victims had been killed.

Aymar repeated his skills and several other local criminals were imprisoned. He French clergy began, then, to express their concern, fearing that dowsing practiced on a large scale to decide the guilt or innocence could lead the injustices.

Controversy, however, arose among intellectual circles about the reasons who did the divining rod manifest. When it was investigating water or metals, believed that the movement of the rod due to the influence of the mysterious invisible corpuscles emitted by these substances following the theory of René Descartes. But, when the issue was to define the boundaries of land or seek a criminal, it was not over immutable or uninteresting cases and, if the rod was efficient in such cases was because causes should then be intelligent, moral and supernatural. And, as you would not expect God cared with small human causes such issues were surely works of the infernal forces. Hence it argued, therefore, that the dowsing rod does not It should be used to find objects or materials to decide on moral issues.

In 1693, Pierre le Lorrain, abade of Vallemont, publishes a courageous defense of art dowsing entitled *The Occult Physics*, with the caption *Treaty on divining rod and Use for the discovery of Source Water, metal deposits etc.* Contrary to corpuscles theory, he proposed: because some people are endowed with a visual quality or exceptional listening, why it not is possible for the organs connected to dowsing phenomenon could have a variable sensitivity? Whatever the explanation that science could give on the matter, Vallemont was convinced that the dowsing could only be beneficial to humanity. On October 26, 1701, the work of Vallemont was placed in the *Index Librorum Prohibitorum* by the Inquisition. Also the work was It reedited in 1702 and in 1722, such was the interest in the art of dowsing wake. The century

XVIII, however, a growing number of parents and abbots studied the phenomenon when they had themselves practiced intensely.

We could expand much on a lot of historical data reporting all species hypothesis and made them all related, but we prefer short and move to the second half of the eighteenth century. A new fever ran scientific and popular media in Europe: research on electricity and magnetism. In 1798, Antoine Gerboin, professor at the Faculty of Medicine of Strasbourg, after contemplating the son a friend fiddled with a wooden sphere

I suspended by a thread, he had the idea tying the end of the thread in the child finger, noting that, after some fluctuations, the sphere always returns to the position initial. What he did remember, the English physical work of Gray, which has determined that certain materials hanging from a thread maintained by an operator were attracted to the electrified masses, and research Wheler, who had perceived that the desire to produce a certain movement was the main cause of the reactions of the pendulum. Gerboin took out numerous experiences with bodies suspended by wires, resulting in complex theories about "a particular force that exists in man". The result of their research was published in 1808 under the title " *you experience Research on New Mode electrical action* ". The pendulum, as the main instrument for the practice of which would be defined as dowsing, I had just been born.

In 1812, famous repeated chemical Chevreul Gerboin experiences. During their experiences, Chevreul rested his arm on a block of wood different distances between the shoulder and hand; was thus the oscillations of the pendulum decrease as fingers caught the pendulum approaching the block.

When the fingers were fully supported on the block, so that was obviously impossible to move the pendulum stop moving.

I summarize the theory of Chevreul on the enigma of dowsing 1850. The movement dowsing rod can be explained either as part of a moral world and having a spiritual cause caused by:

God or the Devil or his the spirit of	angels hierarchy; adepts; rabdomante;
Be part native physical cause of matter that:	the material world and having a hidden powers associated
peripatetic antipathy;	Aristotle called sympathy and
Cartesians, and contemporary electromagnetism	corpuscles, vapors and fine matter; (Chevreul), electricity, or eletro-organism (galvanismo).
The movement rabdomante picked	rod could be amplified when the Also on hand
a material identical to a different material	the subject of the investigation; the object of the investigation.
Since both opposites, it is a cause The phenomenon.	methods are diametrically mental and nonphysical which could explain
Adherents of or exclusively practical, recognize the influence of thought, whether voluntary, desire or intention of him who he has. Thought can neutralize the action of the material body, so that the metal is believed influential on the rod it has no action when looking Water.	dowsing rod, be they theoretical

Earlier findings Chevreul I went in favor of the pendulum, until the day that had the idea of blindfolding and test results became inconsistent. It concluded precipitously visual knowledge that contributed to the involuntary muscular action dowser, when I knew what I had to discover. And for almost a century scientific investigations were delayed because of the disclosure of the concepts of Chevreul, who had made a stubborn adversary of dowsing.

Dowsing at the beginning of the twentieth century

In the twentieth century, dowsing emerged as a new science to the chagrin of some, and it began to be used in the most different fields. In 1919, the abbot Alexis Bouly in abade collaboration with fellow Bayard, exchanging ideas on different etymologies they reached the junction of two words, one of Latin origin, radius-radio, radiation, and other Greek, aisthesis-sensitivity. The term dowsing had just been born, dethroning expressions, used hitherto zaori and dowsing.

It happened in 1926 in Paris the third International Congress of Experimental Psychology; several Sessions were devoted to dowsing and its practitioners. Thereafter the congresses happened: 1926, 1929 (creation of the International French Association and the Friends of the Dowsing), 1932 (Congress of Avignon with representation from eleven countries), 1933, 1935 and Finally in 1956, the Locarno International Congress decided the creation of the World Conservation Union the dowsers.

Alex Bouly

Natural de Boulogne, the abbot Alexis Bouly (1865-1958) was the first superior school in that city until 1910 having been then appointed pastor in small seaside resort Hardelot Plage. It was there that one day, walking with a practitioner friend dowsing, a small wooden rod caught by accidentally put vibrate near a water source. Intrigued with the event, he repeated Bouly experience and never stopped the activity that would famous later.

Alexis Bouly was endowed with an extraordinary dowsing sensitivity, especially in the manipulation rod. During his life he spotted a large number of water sources, getting accurately define depth, quality and size. They came from everywhere for future reference. His talent surpassed the borders of France was called to exercise their skills in Portugal, Spain, Poland, Romania and the Canary Islands. At the end of the war of 1914-1918, general, eager to test the skills of Abade, asked to identify the origin of manufacturing non-detonated still buried in the ground shells. performed task excellence, since Bouly no mistake once. Bouly later founded the Society of Dowsing friends using then the new expression created by him. Seen that He was more of a scientist than a charlatan doctors helped voluntarily make their experiences. It was well received in hospitals, where identified, unerringly, cultures of microbes that had him in test tubes.

Despite having created a complex method of research, the "father of dowsing" about his art had a very simple concept: *"We live in an ocean of radiation,*

which we are unaware, invisible effluvia emanate from all things, and it is not more than to discover its existence, making us true detectors alive. A fragile antenna

It makes it easier to grasp the hidden radiation: the famous dowsing rod. Today I am not more than a researcher vibrations, just that ... "

In 1950, the government of the Republic granted that modest "researcher vibrations" the Knight's Cross of the Legion of Honor.

Alexis Mermet

Born into a family of practitioners dowsing, a native of Savoy, Alexis Mermet (1866-1937), (he soon began in the art of dowsing. The extent of their knowledge and importance of their successes in the field of dowsing They earned him the title "Prince of dowsers". During his life he discovered numerous water sources mineral, metal deposits, people Missing etc. In 1919 he began practicing dowsing distance (twenty years later Émile Christophe did precede the word dowsing prefix tele: "telerradiesthesia" meaning the dowsing distance), influenced by the practice of other parents they discovered water sources investigating maps; Mermet only extended this technique to all areas of its activity. In 1928 publishes *Le Pendule Revealer* two more books in 1938; but it was in 1934 Maison de la Radiesthésie edit the famous *Comment J'Opere* "As I trade for discover near or far: fountains, metal, hiding bodies, diseases "-considered the Bible dowsing, which Mermet says: "I invented the diagnostic method by the pendulum". Translated to English, the book spread the methods of the famous abbot beyond Europe's borders.

The first half of the twentieth century was graced with the surgimento of the most important dowsing names: those already referred Alexis Bouly and Mermet and yet, Louis Turenne, Henry France, author of the first magazine (1930) Monthly dowsing, Émile Christophe, large theoretical Lesourd Gabriel Alfred Lambert, founder Maison La Radiesthésie, Antoine Luzy, Jean Jurion, Joseph Treive, Léon Chaumery, André de Belizal, just to mention some of the most known.

As in France, also in Brazil dowsing was among the best of his parents and most qualified practitioners. Since the beginning of the century parents of French origin, on mission

inland diagnosed, prescribed remedies and They localizaban water around their dioceses. The father Frenchman Jean-Louis Bourdoux spent sixteen years in a Pocone mission in Mato Grosso. Thanks to Indian remedies, products of local flora, father was cured of tuberculosis and anemia that

afflicted them. From its cure, Bourdoux was devoted to study of the therapeutic properties of our flora. Back in France, he took extracts from studied plants and distributed to some doctors homeopaths. Such remedies, called Poconeols in tribute to the mission Pocone, they were effective and even today are used in Europe. Disseminating Mermet results convinced him that the dowsing could be a good method for choosing remedies. Later he writes: *"If the abbot Mermet You can do it, because I would not be able too? Oh yeah*

I knew this method when I was in Brazil! " . After years of study and practice and other stay in South America in 1932, Bourdoux published the book, now a classic, *Notions Pratiques of Radiesthésie pour les missionnaires* , published in Brazil 27 in 1952. In the preface, he says: *"If you have the patience to read the following pages, you will see how, thanks to the new science called dowsing, without being a doctor and almost without costs, you may help the faithful and pagans as well"*. Among parents who learned dowsing Bourdoux François-Marie excelled Herail, that during his stay in Mato Grosso located hundreds of water wells and as streaks of water containing gold in bed. His method was: walk north to the south detected veins common water; He walks from rising to the west was the vetass auriferous. (In mental convention Herail fork, when it tilted up, indicating the other). To order Alfredo Becker, famous Paulist dowser, the pastor of the Our Lady of Fatima Church in Sumaré, in São Paulo, Brother Ignacio, created a neutralizer of harmful energies subsoil. After a few months of research, Fr. Ignacio developed the Radiom, who for many years was sold in the same church. This simple device is one of the most efficient neutralizers already created. Its beam range is 20 meters in the horizontal.

twenty

Energy

Wherever we go today, we heard everyone talking about energy this place has a fantastic energy, that person has a very dastardly energy will energize the chakras etc. Interestingly an abstract energy all talk, something (medium) inexplicable, when questioned talk about magnetism, electricity, or something divine (non-explicable).

The term energy originates from the Greek "*energes*" (active), which, in turn, comes from "*Ergon*" (work). The etymology of the word indicates that energy always involves activity. Physics energy defined as "**any agent capable of producing work**" .

Each type of energy has its own characteristics, such as intensity, power density, polarity and others. Energy is never created nor destroyed, but only transformed from one type to another type.

Energy physics known to have positive entropy, ie propagate the place of the greatest potential for smaller energy potential. This no longer happens with some of calls subtle energies, which are not the domain of science. The orgone discovered by Wilhelm Reich has negative entropy, ie, it spreads the smallest potential for higher. This characteristic allowed the construction of his famous orgone accumulator. That accumulator is composed of alternating layers of organic and inorganic material, forming a box inside which the patient is placed. Normally the orgone accumulator Reich is made of plywood (externally) and galvanized iron (internally), having between them a layer of sheep wool and other steel wool. As the organic material attracts and orgone inorganic repels, forms a flow orgone outside to inside the case.

The human body has greater potential orgone that the surrounding environment and, therefore, the orgone flows from outside to inside the body. Inside the orgone accumulator is a orgone concentration that maintains the flow from outside to inside the box and this for inside the patient's body.

The magnetic energy of our globe bathes all living beings who live in it. Field Earth's magnetic power has 0.5 gauss and is detected by living things through cells containing magnetite, lodestone natural.

Earth's magnetic field is distorted by the iron in the reinforced concrete of our residences, which leads to a frequent lack of magnetism for our organisms.

This fact, allied to electromagnetic pollution caused by electric network and devices It connected to it, is a major cause of health disturbances.

Currently official bodies of some countries recognize as causadoras pathologies degenerative electromagnetic interference caused by high transmission towers tension in the surrounding residents.

twenty-one

Electromagnetic or radiant energy has a spectrum width ($<3 \times 10^3$ to 3×10^{19} hz) and propagates at a rate of the same order that light

Electromagnetic theory of Prof. René Louis Vallée says: "If in a given space energy reaches a sufficient density, the materialization of a photon occurs. But if the energy density is lower, it can exist only in waveform ".

Extending this concept, Jean Pagot (French engineer and dowser) tells us:

"In an even smaller density, energy also longer wave and passes diffusely exist, determining a perturbation of that space (caused by certain or geometric) forms: an energy emission (energy form) then occur. The applying energy generated form symmetrical shapes is beneficial to living beings".

Thomas Bearden, physical, theoretical and nuclear engineer, is the author of the so-called theory

electromagnetic scale. One of the fundamental concepts of this theory is that zero apparent or nothing (blank) is constituted by an infinite number of substructures zero sum. Nothing is apparent, in reality, full of potential zero-sum and, being stable, we transmits illusion that this means is empty and neutral. This virtual state energy It is the electrostatic scalar potential and Bearden calls it " **anenergía** ". alterations this anenergía, by its implicit potential, causing all and any phenomenon perceptible externally observable in our physical universe.

Bearden energy is conceived as a real " **stress-space** ".

Bearden explains that the mass, charge, spin, subatomic particles, fields electrical, magnetic fields, the speed of light, gravitation and all forces elementary and phenomena of our physical world are directly related to the variations and the patterns of the virtual state from which they come. MS scalar theory allows us to understand energy better shape and subtle energies manipulated in dowsing and radionics. his resemblance to the ancient Eastern concepts is evident and will be better understood continuation.

Energy and Eastern Mysticism

In Chinese philosophy, Taoism mystical orientation allows us to compare the concepts of modern physics, especially to electromagnetic scalar theory.

Tao Chinese sages called the hidden unity under the opposition of the archetypal poles Yin and Yang. The primary energy Chi condenses and disperses rhythmically, generating all forms that will eventually dissolve in vacuum (electrostatic scalar potential) and manifested by the dynamic interaction between the polar opposites. Polar opposites (Negative / positive, male / female, hot / cold, proton / electron, full / empty etc.) are a unit, as they are in truth different aspects of the same reality.

Hinduism, Buddhism and Taoism affirm the existence of a primordial energy that is forming the physical universe and comes from the only reality (the Western God).

Subtle Energies

Calls subtle energies are still viewed with suspicion by official science. Those energies transcend matter and its phenomena and, unhappily, are even more domain mystical than scientific.

Mystics say that all matter always come from aither (ether) and is for him interpenetrating, being the aither, the average driver of all energies and light itself.

The primary energy is manifested by infinite condensations until the formation of the matter. This energy is also known as universal cosmic fluid (in the west), mulaprakriti (in Hinduism), qa-called (in ancient Egypt) and countless other names. A of these condensations it is that it is fluid or life force (prana of the Hindus) and responsible for plant, animal and hominal life.

Living things have bioelectricity and biomagnetismo, creating a field interacting bioeletromagnético. This field is the bioplasma (terminology of Russian scientists) and

bioplasma is called body. This subtle body is known by mystics as etheric body, vital body, etheric double, bah, linga-sharira etc.

The bioplasma body is absorbing vital energy through centers of force (Chakras). That prana (one of the condensations Chi) flows through channels bioplasmic (Nadi, yogis) and will energize the nervous system, glands and finally the blood.

Prana (vital fluid) is a vital organizing principle that through the chakras of the body etheric, exerts a profound effect on the physical body.

Interaction mind-energy-matter

It is known that the binomial matter-energy is one whole and its polar opposites dynamically interact; even it knows that the mind is energy transceiver low frequency and subtle energies. Such developments suggest the possibility of triple interaction between mind, energy and matter, this possibility ascertained by processes radionics and the psychokinetic phenomena.

Psychoenergetic phenomena are divided into Psi-range and Psikapa. Psi-range phenomena They are subjective in nature: clairvoyance, clairsaudience, precognition, psychometry etc. and Psikapa are objective phenomena (acting in the matter): levitation, Psychokinesis, materialization etc...

Brazilian researcher Eng. Hernani Guimarães Andrade supports the hypothesis of a field Psi and a Psi matter that propitiate the appearance of phenomena Psi through interaction with psychoenergies.

2. 3

The bioplasma field is electromagnetic in nature and is the Biofield responsible for life on the physical level. The energies from the astral body can only act on the biological (physical body) through bioplasma body (etheric body). The psychoenergies act directly in the field bioplasma influencing and controlling, so unconscious life processes. So almost always unconscious, the spirit, through the psychoenergy, it can also generate physical and biological effects at an out-matter his own physical body.

Considering that mind, energy and matter are only different aspects of one Actually, it is easy to understand that the dynamic interaction between these three elements is not only possible as it can occur at various intensity levels and in different directions. To better understand the radionics process we can describe the following components:

- a) A single complex Radionics device (certain graphical representations) or (Machine), using as emitter subtle energies.
- b) The objective of the process (man, animal or plant) functioning as receiver these energies through their subtle bodies.
- c) A subtle means (aither) transmitting energy information and independent of time and ordinary physical space.
- d) A witness (photo, hair, leaf hair etc.) of the target to try working as tuner between the emitting source and receiver.
- e) Psychism, intention and the intention of the operator constituting an

modulator-amplifier of the emitted energy
f) A waveform (or other negative green), which is the carrier wave of vibrations (energy standards) of the testimonies (of the receiver, the remedy and of intent) through aether.

Radionics, as discussed in this paper, allows the interaction of the mind (psychoenergy) with sutis energy, generating a physical effect in living matter (plant, animal or man) and even in the non-live (water, soil, metals etc).

Cosmic Energy

Cosmic radiation is an ultra-high-energy radiation extraordinarily. The radiation primary cosmic space comes from outside and high, the earth's atmosphere. The primary radiation is formed by mild and medium duty cores and especially protons. The reactions of the primary particles with the particles of the atmosphere is radiation high school. The interaction of the primary and secondary particles occurs through processes producing multiple nuclear protons, hyperons, mesons, electrons, positrons and neutrinos.

Cosmic particles with unimaginable energy penetrate our bodies producing violent shocks in certain atoms; therefore, all our life processes

24

They interact with that energy. Our physiological balance is also due to the interaction of our cells with cosmic particles.

Cosmic radiation increases with altitude and probably why the phenomena paranormal in high altitude places like Tibet and the Andean highlands must occur action on sensitive cosmic rays brain cells.

Cosmic radiation can be mentally drawn through prayer. It was what He found Dr. Baraduc in 1900 in the Cave of Lourdes (France). This celebrated researcher He recorded on special photographic plates a kind of light rain with the crowd of faithful. He even recorded a sort of meteoric strip at the time of the passage of the Blessed Sacrament.

Such phenomena occur depending on the powerful mental urge the faithful to be magnetically attracted healing corpuscles cosmic radiation. The famous miracles Lourdes may then be explained by the interaction of the photon field (radiation Cosmic) with the biofield of the faithful. Photons are endowed with spin (rotation of an electron around its own axis) and, therefore, are magnetic; hence they can interact with the field biomagnetic.

Energy Crystals

The crystals emit, as any solid material, energy propagating clockwise. As all and any energy, the crystal also propagates in helical vortices rather straight line.

The intrinsic energy of the quartz crystals can be transformed into electricity is the We submit to a given pressure. This phenomenon is called piezoelectricity.

Modern electronics applies certain electrical potentials in crystals especially prepared to produce other electrical potentials. The potential thus obtained have the form pulsating, stable and highly accurate frequency. Crystalline radiofrequency generators, the digital watches and many other electronic instruments obey the same principle.

The effect (qualities, characteristics) of an element or mineral, thus the crystal, It can be transmitted to the body through magnetic and electrostatic fields Earth used as carrier wave. This fact was proven by scientific works German Dr. Wolfgang Ludwig and his fellow Canadian Bigu del Blanco, who apparent relations between oscillations called electronic plasma (vibrations or waves energy subatomic level) and the magnetic and electrostatic fields land.

The energy of crystals and gemstones can be used directly in the patient or remotely by Radionics emission. Studies done with the mental programming crystals and their therapeutic use show that they easily interact with subtle energies. He

25

glass transceiver functions as those energies acting in living beings and the environment environment by vibrational resonance.

Morphic resonance

Rupert Sheldrake in 1981, in the book *A New Science of Life*, suggests that self systems organizers, at all levels of complexity - including molecules, crystals, cells, tissues, organisms and societies of organisms are organized by "morphic fields". In laboratory when trying to first obtain certain crystallization, this occurs in space reasonably long (not exist a previous morphic resonance); to As experience is repeated, time to perform crystallization decreases, as if the solution to effect crystallization learned (by the existence of a resonance Cumulative) morphic. A traditional example of morphic resonance is the experience with monkeys family of monkeys inhabiting an island, was fed by scientists controlled experience. One monkey was taught to wash sweet potatoes were you supplied as food, before eating. Some time later, all individuals the same group also washed before eating sweet potatoes. At the same time, another group monkeys, on another nearby island without any contact with the first island, began presenting the same behavior.

The phenomenon of such an influence on such through space and time is called morphic resonance. This phenomenon does not decrease with distance, as also it involves energy transfer, but information. In light of this theory we can understand that the repetition of certain events in nature is not related to eternal, immaterial, and yes with morphic resonance laws. The theory of energy transfer enlightens us as the energy of witnesses in dowsing is transmitted to the remote and becomes present anywhere where we want to detect.

Definitions

With increasing interest in all type of studies of so-called esoteric sciences, we have seen have committed the most varied errors which refers to the names the study of all phenomena that are sheltered under the name of dowsing. Because we find essential starting this work elucidating those first topics.

1. The practice of dowsing does not require any special kind of meditation, mentalizing, recall or invocation. Fears regarding the positions, attitudes, orientation, are absolutely unfounded. Certain practices, such as burning incense, wash hands, use coarse salt, using certain symbols on tables or hanging on the walls are more do with superstition or some sort of atavistic suggestion. Anyone You can practice dowsing, there are special attributes needed for this. But the example of all other human activities, some will be better dowsers than others. The main rule obtained good results is: practice, practice, practice.
2. Denominations: find wise to begin this stage of work giving a definition of designations for better understanding of the reader during During this work.
 - to. Dowsing: word of Greek origin (Rhabdos, rod, and manteia, divination), that is, divination through the rod. This was the old denomination now called dowsing. Dowsing was used in the search for water sources and metalliferous deposits until 1688 Jacques Aymar became famous for his adventures in search criminals.
 - b. ZAHORI: One who practiced dowsing. Arabic word meaning clear or clarified. This name was attributed to a sixteenth century Spanish community whose members were able to "*see the things hidden in the bowels of the earth, water veins or bodies enclosed in sarcophagi* "
 - c. Dowsing: word coined by Abbot Bouly in collaboration with Alexis The abbot also Bayard. For years the two abbots exchanged Correspondence researching different etymologies for

find a term that was both scientific and popular. Finally they decided join two words, a Latin, radius, radio, and another Greek, aisthesis, sensitivity. The term " **dowsing** " was born.

d. Dowsing FORM WAVES, EMISSIONS FORM, EMISSIONS

DUE TO WAYS: Study of all phenomena inherent in the two- or three-dimensional shapes. (Later we will depth study of the topic.)

and. RADIONICA: Discipline based on research by American doctor Albert Abrams (originally called Electronic Reactions

27

Abrams); the term "radionics" was coined for a Congress practitioners of this technique 40s. This expression initially designated practice diagnosis and therapy instruments electrical / electronic, but the years 50/60, started arise in the work of the brothers, Servranx, famous Belgian dowsers, and finally, in 1965, it appears in the Book Vibratory Physics Micro- and Invisible Forces, André of Belizal, expressing the concept of transmission distance, only applied to wave dowsing

F. Psychotronic: Word composed of two Greek words: psyché, breathing, spirit, and tron instrument. This discipline began in the late 60s and counts as the greatest exponent Czech researcher Robert Pavlita, famous for creating simple instruments which, once loaded with energy Operator psychic produce various types of work. This expression is also used by some researchers Americans to designate the radionics devices type, but whose characteristics fleeing the limit imposed by the concept of radionics. Often this term is also used with trade order, aiming to express an ally quality to the powers of the mind you, not the machine.

g. Psiónica: Fundamentally one dowsing technique applied to the medicine. Psionic medicine It originated in the work of the abbots French and English physician Georges Laurence. In their research Laurence discovered the reality of Unitarian theory pathological McDonagh, He is saying: *"All diseases are only aspects in various forms, the imbalance of proteins body "* . Psionics requires very simple instrumentation: a graph Wood, or some variation thereof, a pendulum, Turenne rates, Patient testimony and remedies

Homeopathic. As in the case of psychotronics this term is also used in the United States for purposes purely commercial.

h. KABBALISTIC Dowsing is a type dowsing particular, using pendulums cylindrical, jacketed words written in Hebrew or any other language that contains the same qualities. Discovery by French Jean Gaston Bardet in collaboration with Jean de La Foye. (We will make a thorough study later.)

i. RADIESTESI

A ICONICA: A term created in 1994 by the dowser António Rodrigues, designates a type similar to dowsing Cabbalistic, which are used symbols in place of words.

j. EIFs: (Emergency Influences and Forms, and "s" plural) -an expression coined by the Ark 'AII Foundation, French institution that brings together some of the most renowned French researchers, including Orthodox areas. The initial proposal of this group was to create a new kind of logic, non-Cartesian and non-Aristotelian. Detection of the studied phenomena is made through of dowsing techniques. This term applies to demonstrations formerly called wave form.

THEORIES dowsing

For most dowsers love the area, a fundamental question placed at the beginning of the century: Indeed how and why dowsing work? The first of The hypothesis was that the dowser perceived "waves", fumes, vibrations coming from the ground investigated. However, this proposal was difficult to lift when it began practice dowsing distance maps. The second hypothesis, written by Sir William Barrett, author of *The divining rod*, proposed: "... we affirm that dowsing is a purely psychological problem, that all phenomena are rooted in the spirit of dowser, that no physical theory withstands close scrutiny and movements dowsing rod and only relate to the outcome of the investigation to give a physical expression to a mental and abstract knowledge." In the 30s, Mermet has developed a dowsing complex theory based on eleven physical factors influencing the dowser liabilities, leaving, however, stating that "the dowser should be in perfect harmony with the object of their investigations "

The dowsing theory based solely on physical causes was completely abandoned in 1934 by French engineer Émile Christophe, based on the assumption that, if all underground physical bodies emit radiations, the dowser who was not only concentrated in a single body should react to all this information one time only. TO this concentration on a single target Émile Christophe gave the name " **orientation mind** "and defined as " **mentally convention** "technique whereby the dowser establishes a internal dialogue with your unconscious, through which are defined the rules of positive spin or pendulum schedule to answer "yes", turning negative or anti-clockwise to answer " **no** ".

The " **mental orientation** " is the status question needed to be achieved response desired, functioning as an act of " **tune ...**"; and " **Mental convention** " as well as filter so that only the answers are yes or no, also promotes proper dialogue between the brain and body, for the reaction, and processing through a reaction neuromuscular, come to give the dowser the desired response.

In the 1960s, Yves Rocard, professor at the Faculty of Sciences in Paris, found that the human body has magnetic sensors capable of detecting variations of 5 gamma, that is, 10 thousand times less than the potential of the Earth's magnetic field (0.5 Gauss). In 1983, Yves Rocard published *Le Pendule Explorateur*, with the result of their investigations, defending the theory that human magnetic sensors are responsible for reading ability of environmental changes. Unfortunately this theory does not apply in the case of tellerradiesthesia, taking into account the distance of the sensors from the subject of the investigation. Recent years, invaded our daily energy concepts: chakras, subtle bodies,

aura etc. Today we know that our energy field is not only a file of emotions, pathological patterns, memories of the past as an effective tool receiving all phenomena energy on our return. That reading us do all the time an unconscious and involuntary, and we store the information harvested in the unconscious. The set of dowsing techniques establish the unconscious-conscious bridge We perceive the answer when our hand makes the pendulum rod rotate or tilt.

CLASSICAL THEORIES

Over the past centuries many theories were developed in an attempt to explain the dowsing phenomenon. Today it is almost amusing to read full theories such strange concepts. Because of the great influence of the Church in medieval and Renaissance society, he came to believe the phenomenon happening under supernatural and even demonic influences. Only in 1939, through the use of slow-motion filming, it was possible to see that the dowser promotes the pendulum motion by an unconscious action of neuromuscular origin.

There are two trends in the practice of dowsing: physics and mentalist ..

Physical trend is based on concepts developed primarily by the French abbots Bouly and Mermet. These concepts are: rays, waves and "colors" emitted by objects and beings and oriented according to the cardinal points and the geomagnetic field. Dowsters of mentalist they criticize the tendency of physics, because many times the wave length, the "color" and the essential characteristic of an object beam differ depending on the operator. The tendency mentalist believes that mental convention before the investigation is acting in the unconscious operator, causing the reactions responsible for the movement of the pendulum or of the rod.

Dowsters who practice called "dowsing wave form" the two join forces trends, being called fisicomentalistas.

Abbot Mermet fame imposed its classical method of physical dowsing. According to him all bodies emit waves and radiation whose field of action (radiesthesic field) occurs in the Human Body certain nerve reactions that generate a kind of current that moved by hands. The invisible flow is what moves the dowsing instrument. The concepts established by Mermet were:

- 1) SURFACES AND magnetic field lines; You can still call: CAMPO Caravan INFLUENCE - all bodies are wrapped by a number of magnetic layers equal to its serial number. And so it is that we find, for example, seven parallel to the banks of a river lines, because this is the serial number water and the seven layers surround the river water above, below and on your side. When the body is small, these lines take the form of circles Concentric. These strips have a width of 5 to 30 cm and the distance between They increase as they distance themselves from the riverbed.
- 2) FUNDAMENTAL BEAM - all body emits a beam whose direction forms an angle invariable with the north-south direction, maintaining a constant angle relative to horizontal. It is measurable in degrees. Its wavelength is proportional to the mass of the body. This allows the dowser distinguish two bodies with the same serial number. For example, a silver coin weighing 10 grams emits a fundamental beam 10 centimeters long.

- essential also produces negative turns.
- 3) LIGHTNING CAPITAL OR MENTAL - is the object beam that goes to the brain of the operator. Is through it that the dowser detects the presence of the object sought and as its nature, direction, distance and depth.
 - 4) Solarbeam - is the same ray discovered by Bouly; It is detected when passes a pendulum between the investigated object and the sun or other light source He is the reflection of the light source on the object and its length is proportional to the mass receiving direct solar beam. It is also detectable in covert days or the sun below the horizon. Even when the sun is hidden by clouds or below horizon, this ray emission is still present.
 - 5) BEAM TOKEN - or binding beam. Whole body emits a beam connecting to another body of the same species. This beam allows remote sensing, making use of witnesses.
 - 6) BEAM VERTICAL - this beam is emitted in the vertical by all bodies. The geomagnetic anomalies can alter their emission. For example, it is with this ray graphic work on the pendulum dowsing.
 - 7) dowsing IMAGES - are mirror radiation surrounding the body.
We could say that they are something like the ghost images
TV sets are more intense in stormy days or strong sun
intensity decrease at night and on cloudy days. The images
dowsing tend to errors in the dowsing research. The technique
most practical is to eliminate the effect of the tips, sufficing for that
take, with his free hand, a pencil with tip tipped up or maintain
on the worktable a needle stuck in some soft object near the
witness. intensity
It decreases with distance
while the intensity
Object of
investigation is
constant.
 - 8) SERIES AND ROTATION - each body produces the correct number pendulum of, oscillations followed by the same number of rotations. When two bodies have the same serial number, they can be distinguished by their lightning fundamental. There are different results among the serial numbers of several classic dowsers. You want to make life easier? Use Table abade
Mermet !: CUERPOS and Serial No.: Steel 4 5 Aluminum, Silver 6 Water 7 Gold 11 22 platinum, etc.
 - 9) SPIRAL - the fundamental beam on the pendulum makes a correct number of spirals, ie spiral turns that seem somewhat oval. This happens in "Levels", showing a number of turns on one level, at the level above

correct number of oscillations, repeating the correct process number times.

- 10) PENDULAR DESIGNS - over a dowser experienced the pendulum
It seems to indicate a figure in the object on which it is suspended. Example: a pair of scissors two circles and a line is made.

- 11) weight changes - some bodies on the pendulum it gives the feeling of being more lighter or heavier. According to reports Saevarius, liquid petroleum gives Printing weight, since the gas for the pendulum appear lighter.
- 12) FADING - very similar to what occurs with the reception of radio waves in the days storm dowsing fading occurs radiation when the pendulum enter into inertia. The disappearance occurs because geomagnetic changes, disturbances radio, weather changes, cosmic and planetary influences, present earth quakes etc. The cause of the Quenching may also be by the dowser and due to illness, the fatigue or psychological changes. When this occurs, the investigation should be suspended and subsequently be resumed, or on another day.

The dowsers line the mentalist express their disbelief in these concepts, the that both the serial numbers as the angle of the beam changes fundamentally one dowser to another. What leads them to believe that these principles are merely conventions various mental, relevant to each dowser. Mentalists successfully achieved, as physicists, seeking to find the body without using any system-rays, waves or otherwise, that just use the cardinal direction.

RETENTION - name given to the result of the impregnation of the energy of a body where he remained for some time. The duration of remanence varies with the nature of the body and eventually it was in place. Remanence can reach the ground, objects, plants and the pendulum, and the dowser himself, in this case named after impregnation. The remanence is stronger metal, then the organic matter and rocks. The work of field producing greater remanence of gross floor area.

It is believed that the remanence lasts a time equal to that in which the object to remained in place

To know if a given actual or remaining radiation is the technique used René Lacroix to l'Henry. a sheet of white paper is placed between the pendulum and the radiating source; if the pendulum remains stationary, radiation is remaining; If you turn, comes from something on site.

Glass pendulums are particularly susceptible to the impregnation; We can attribute this to the power of crystals known as programming.

Various methods for removing remanence are not completely effective and vary as the object reached. I have here some: wash several times the place; and it is an area, I rummage; Using a bar sulfur as noxious fumes aspirator gives good

3.4

results in affected areas and applying a strong magnet embaralha wave I presented.

IMPREGNATION - we can also call energy pollution; it can occur among the most diverse objects, instruments and situations to practice dowsing. The pendulums can soak up the energy of the people and witnesses used; the witnesses piled haphazardly on a table energy exchange it with each other, as tarot cards, crystal, glass and other objects remedies. Working method and organization, by the dowser, will prevent many of these types of occurrences.

DESIMPREGNACIÓN - - If for any reason happen impregnation, use techniques concerning the practice of magnetism: strong shaking, ground contact; that is to say valid for the dowser and instruments. Rub hands vigorously. On worktable, where appropriate, pass cloth bag with sulfur.

You want some advice? Do not fuss, do magical practices, do not be possessed by the neuroses pollution. Chaumery and Belizal recommended technique strong blow on the instruments.

radiesthesic INSTRUMENTS

The vast majority of dowsing works can be performed with the use of the pendulum or rod, depending on the situation of use and sensitivity of the operator. There are no But types of research that require the use of specific instruments.

For a better understanding we divide families dowsing instruments:

pendulums:

technicians

Utility

In the family of technical pendulums include those used for specific purposes; example: Egyptian, chromatic pendulum control etc. All other pendulums, regardless of their shape, color, form, materials etc. are classified as general purpose

Rods: in this category we include all instruments constructed from one or more rods, with or without molas, straight or curved, with or without handle; example dual-rod, aurameter etc.

Other instruments: rules for analysis, pointers, compass, etc apothecary remedies

The definition of pendulum is: a suspended mass by a (flexible) rope. This being so, any object of any material suspended by the rope can be used as pendulum dowsing. For outside work preference is given to heavier pendulums, as the wind and uneven terrain hamper their normal swing. The pendulum must be symmetrical and its color should be the material itself; in the case of being painted, the color should be neutral, since colors influence the dowsing research. The suspension wire can be cotton, flax or synthetic threads, always in neutral colors, or even a thin metal chain. The pendulum plumb bob, spiky, metal is the most recommended, as it can be used in most work, especially on maps, plants or graphics will be easier for the correct identification point he indicated. Here is a list of the main pendulums and their intended use.

- a) **Pendulum witness** : I made of any materials, wood, plastic, metal, It has an inner cavity (closed with lid rosqueada) where you can place a testimony, facilitating research. Best known pendulum testimony is what the abbot Mermet, in pear format. The insertion of control in Inside the pendulum facilitates tuning the operator under investigation. This practice is particularly useful in finding minerals over, remote maps. Some dowsers, depending on their personal characteristics, end up creating a

36

methodology that is specific to them; For this reason, for some of them is indispensable witness the use of pendulum in their investigations.

- b) **Escriptopéndulo** (Jean Auscher) is a pendulum brass in the shape of a flattened pear, whose tip allows rosqueada placing a fine brush, embedded with ink, it enables register on paper their movements. Useful in the preparation of drawings teleinfluyentes or even on record coordinate direction on maps. (Only for sale in France.)

- c) **Egyptian Pendulum:** copy of a pendulum stoneware (ceramic I vitrified mass) found in a burial chamber in the Valley the Kings. To yield an equivalent density stoneware, this turning post-iron pendulum is reinforced internally by a small lead weight, which allows you to reach the weight of 22 grams the original. And extremely sensitive and, therefore, very useful in biometry and Mental dowsing. And neutral, as no issue can impregnate. When rotated clockwise intentionally emits wave desired. His superior to others is seen in the fact that

tuned with two harmonics of the investigated wave. This happens in virtue of its shape; for this reason, that an Egyptian pendulum has these qualities is essential that your drawing is excellent. No radiates Lead wave Contrary to which one might assume, the pendulum Egyptian wave does not emit lead; Irradiation own form voids Metal waves. (In the case that was used as ballast lead, its availability as "lead hunting".) This pendulum requires correct domain of dowsing for proper handling. The height inadequate thread suspension may lead to errors. I recommend a model exactly like the photo (like is not the same !!); no light in consideration the name that the manufacturer gives each model. (Hard to find good quality, even in Europe.)

d) **universal Pendulum Chaumery-Belizal** detects waves spectrum shape and differential transmitter. It is surely the dowsing instrument more complex and unwieldy detection. He dates from 1936, the result of L. Chaumery great creativity. It is presented as a wooden sphere rigorously balanced, diameter 60 mm and weight of 125 grams. finely Slotted two meridians: one electric, the other magnetic, and sensitive Ecuador the electromagnetic vibrations. One brass hike connects the two poles, the mobility enables the exploitation of all points of the sphere. On this hike It is fixed the suspension wire, which has a micrometric regulation for height. Two small metallic masses, fixed in height Ecuador, in dowsing conjunction with a stack of four elements, reinforcing the polarities and prevent your investment when under the action of a powerful wave form. (Hard to find good, quality, even in Europe.)

37

And now possible to find the PU with diameter of 5 cm and smaller weight.

To regulate the PU, turn up suspension until this is over the

power meridian, slide the thread until it
It is over the Ecuador: is the point of intersection of
Red. Take the thread of the pendulum between the indicator and
thumb nail being dumped to the respective
low; and keep the suspense pendulum on a
red surface, for example, a piece of cardboard; he
leftover thread must be on the inside of the hand.
Let the thread slide slowly until the pendulum
into French twist to the right. Make a mark
at this point the wire: this is the working position
for electrical meridian or electrical phase. Hold the string
immediately after the first mark and repeat
the previous operation; the new place is the point
suspension for the electromagnetic Ecuador, or phase

Undifferentiated. The suspension point for the magnetic meridian or magnetic phase easily found; just make a mark halfway between the two points previously detected.

As well as other instruments created by Chaumery-Belizal, the PU is divided into

degrees, ie, from 0 to 400. On the power meridian, and in the magnetic,
We find the corresponding marks the twelve colors of the spectrum: V-; N; GO; R; N; TO; V;
Az; I; Saw; UV; B.

On the electromagnetic Ecuador, 24 colors and distributed: V-; Alpha; Beta; Teta: Chi;
Nu ; Dzeta; N; GO; R; NA; V; Az; I; Saw; UV; B; epsilon; Kapa; lambda; Psi; Rô; Omega.

Grade	Symbol	Color	detectable emission
33.5	Ne	Black	
30		zeta	Cesium 137 - Artificial Radioactivity
25	N	Wildebeest	
twenty	X	Chi	X-rays
fifteen		theta	strontium 90
10		Beta	telluric waves - Watercourses
5		Alpha	telluric waves - Fallas in Soil

0-400	V-	green Negative	
395		Omega	Radio broadcasts
390		Rho	harmful radiation from power lines
385		Psi	Atmospheric electricity
380		lambda	
375		Kappa	
370		epsilon	
366.5	B	White	

Operate the PU does not require any mental intervention, because the instrument enters immediately tune with the energy to be detected. In the rest position it is strongly recommended placing the suspension upward and the respective thread on the V position + electromagnetic, ie V + of Ecuador Before any operation, the dowser must inspect your rate V + and if necessary to self provision. To good use PU practice with a dowsing is necessary; the neophytes are embittered with continuous errors.

e) **Pendulum virtual cone (Chaumery-Belizal):**
Belizal nurtured a special fondness for this instrument. East

small laboratory pendulum is the most precious and, personally we only serve it to all anatomical diagnoses of iron. This instrument is a compound of arredondeada removes wood; a side oblate has printed the twelve vibrations "Ecuador Chaumery-Belizal "and the two ends just as cone. A disk larger, calculated relative, removes slides in the vibration-color, setting of Thus, a shorter or longer dummy cone. Three regulators in suspension wire allow it to detect vital waves (biometrics), also astral wave, waveforms and waves of colors. It is possible to use unregulated, but once it is done, easier operation is achieved at any of the levels used. This calibration pendulum gave rise to the most varied erroneous attempts to do what. The method step ahead is what He accompanying the instrument when it was produced and

39

sold by the Library Desforages, Paris, when this stop rights literary and marketing of products Chaumery-Belizal.

Place the disc in V +, stop the pendulum by the thread, holding between thumb and forefinger fingers in the overturned vertically low, about two centimeters of the upper cone; Hold the pendulum in this position on the palm of the free hand; this is an operation quite delicate, which must be made in absolute tranquility and repeated several times until the certainty of the result. If the pendulum does not rotate, let slip a little thread, slowly; go repeating this operation many times until the pendulum turn. So Get a free spin to the right, then at this point of suspension a loose knot. As I said, repeat this operation many times to be absolutely certain of the exact location knot; You can now tighten the knot. Any human being non-bearer of serious illness, degenerative naturally emits V +. Well, you finished making the first knot, the knot biometry. Let us now find the premises of the second node, so that for waves. take a replica of the big pyramid and align one side by the north-south axis. Apex for outside, the pyramid emits V +, is just place the pendulum virtual cone on the apex and repeat above operation, picking up the thread above the first knot. When the pendulum enter rotation, then the node point found suspension; Repeat the entire operation many times how deem necessary. The third knot is intended to tune color spectrum waves visible. Again we will repeat the method used in the past two times, placing the pendulum this time on a physical sample of green, for example a green felt box notices, or on a piece of cardboard "green-bottle" type.

Suspending the pendulum knot medium and the disc in the V-bottom, he enters resonance telluric currents harmful water. The V-upper detects harmfulness of cavities or ground faults. (Easy to find, but some models have the disk diameter outside the relationship.)

f) **Detector UV-IV (of Chaumery-Belizal):** similar to pendulum virtual cone, this pendulum detects the radioactive sector spectrum. From infrared to ultraviolet

(Through white, green and black negative) allows detection of a total Vibratory 240 points. (Only and it is in France, used without manual.)

g) **equatorial-unit Pendulum (Jean La Foye)** based on the Hebrew word unit, this spherical pendulum 60 mm diameter allows detecting two phases of the spectrum waves form, magnetic and electric. It does not require any adjustment for immediate use. Easier to use than p ndulo universal. Not issuer. (A member of the Ark 'all foundation in France manufactures this model accuracy.) This pendulum can only be used with efficiency by those who master detection tellurism and polarities (positive, negative,

alternative and neutral) with the common pendulum. It is an excellent tool for settle any doubts or expand the range of research. Suspending the pendulum on the side of the holes, the beneficial magnetic phase is detected and the side opposite the preliminary electrical phase. The cursor at the height of Ecuador allows make color selection to detect.

Color	Magnetic	Electric
Green Positive (V +)	180	0�
Detection: Boundary between magnetic and electric, produces a reciprocatory movement. The V + current is beneficial. And detectable around the megaliths, churches and chapels ancient. normally present		
Blue (Az)	195th	15th
Detection: Very beneficial, neutralize possible imbalances and determine points neutralization. The V + and Az together neutralize electric telluric waves. Magnet, bell (champanhe) placed on a point Az rebalanced local and eliminate V-. The Earth connections must be made at that point. Some rare earth emit Az. Rarely arises in electrical phase (3el circle around menhires.)		
Indigo (I)	210th	30�
Detection: Detectable magnetic in some products acting on the general state. Rarely arises in electrical phase.		
Violet (Vi)	225th	45
Detection: Violet characterizes the state of balance of healthy products. in Electrical between 45 � and 55 � indicates the balance of health. Stress and illness diminish our energy, by referring to the V- and P U.		
Ultraviolet (UV)	240th	60th

Detection: Detectable magnetic (detectable on certain plant products). It is one of the largest sources of pollution that disrupt our environment. Carried by telluric currents which are loaded into the connections to the earth, in the lampposts and under high voltage power lines. The UV induced stress and aggressiveness. Products lunges in UV areas are saturated and are altered, especially energy products; eg homeopathy. Likewise it is inadvisable to save animals rations in these areas.

White (B) **255°** **75°**

Detection: Is wave Chartres. Detectable the hub of all old churches in

menhirs and dolmens. In researching water serves as evidence of his presence and the it indicates its quality, A good example is the source of Lourdes. Be indicates the pollution of stream of water and electricity can be confused with UV e.

Green Negative (V-) **270°** **90**

Detection: Especially detectable in electrical phase. Ultrashort vibration with high capacity penetration; Sometimes cracks in concrete by demonstrating their presence. Probably more harmful all spectrum waveforms. CRTs and some devices V- emit electronic and certain forms make arrangements. Easily detectable on living carriers of degenerative diseases. Rarely it manifests itself in phase magnetic.

Black (Ne) **285 °** **105th**

Detection: very close Vibration V- related to the occult forces of memory walls and serious imbalances. When magnetic phase is an energy and vitality stimulation. Tunable in two circles, M phase around menhires well located.

Infrared (Ir) **300th** **120th**

Detection: The Go strengthens resistance to viruses. Apple cider vinegar emits this vibration. On some telluric lines is in electrical phase Ir. It causes stress and aggression.

ROJO® **315°** **135th**

Detection: Detectable on anti - infectives (belladonna, homeopathy) products. tubes Cathode ray projected R e; It can also occur in the path of two devices in resonance.

Orange (Na) **330 °** **150th**

Detection: Present in certain antiinfectives products (mercurials, homeopathy). Hard to and finding phase.

Icon yellow (Am) **345 °** **165th**

Detection: Detectable in the form of spiral on old churches. Reposaste vibration, drinks They vibrated with it are beneficial when M-phase point Az is often found on a most difficult area to find in phase A. e.

h) Pendulum chromatic Mindtron - creating Antonio Rodrigues, allows detection of twelve colors wave spectrum. It differs from other pendulums Chromatic for its simplicity of implementation, good distribution weight and ease of use. It can be used in replacing the virtual pendulum cone.

i) Pendulum cylindrical - creating Jean de La Foye, suitable for general use; two parallel grooves and equidistant from the central holed ensure depolarization the material with which it was made the pendulum. When Cabbalistic used dowsing or conical in detecting called dynamic wave emissions and the vital field, this pendulum must be completed with a "shirt" ready-made paper white, prey around the pendulum through an elastic or glued; the "Shirt" will carry the word, the symbol etc. under investigation; in this case the holed support wire is a through, thereby allowing the pendulum catch by any one of the two sides.

j) Pendulum Turenne - delicate instrument comprises two magnetic needles fixed on a wooden sphere; targeting these needles determine the wave type captured. (Only in France, also it has some non-consistent models with the original.)

Dowsing rods today are made of steel, very flexible, bent on glass strand, balanced with molas, or even plastic, so that the operator effort is reduced to a minimum, since the rod part of a voltage controlled state until the time tuning the dowser to make thumb, motivated by a muscle contraction same.

Two movements should be considered in handling the rod: Up (Positive) and low (negative); immobility means no response.

There are special rods to detect the geomagnetic mesh:

Any metallic conductor in the space functions as an antenna and, therefore, captures and emits at least a part of what captures. In the case of the Lecher antenna position cursor determines the length of wave which tune the antenna set at the time:

= 1/4 wave parallel resonant circuit or open.

= 1/2 wave series resonant circuit or short-circuit.

With a generator gigahertz, broadcast on SHF, it is easily verifiable reading on the Lecher antenna.

The list indicates 5.7 cm for the magnetic north: slide the cursor antenna to this measure, Take the antenna with upturned palms up and in a position that is comfortable. Focus mentally on the direction in which the north is magnetic while slowly rotating clockwise on itself. At one point, the antenna will begin to be heavy and bow for bass. Confirm with a compass if indeed you got detect magnetic north. How to use the antenna is the same for any other matter. Go training with the indexes of the table.

fifty

e) **Dual rod** - consists of two rods in the form of "L" that secure the leg more small "L" and held in parallel and horizontal, they should cross at the time the tune. Mental convention is established: cruzamento for yes and away for no. Particularly I consider this the best instrument in Family rods; If possible have two outdoor large and small to work indoors or local windless.

f) **Aurameter** - this instrument It was developed by the Rev. Verne Cameron, California dowser. The name was suggested by Max Freedom Long known anthropologist and writer, considering able to measure the human energy field. He

instruments as, dual rod and rod,
it allows movement in all
addresses. Cameron always used this
instrument on its core business

g) **bobber** - rod easy to use, composed of a handle and a rod

stainless steel weighing on
tip. there are some
differences between models
as its origin; by

example, German called biotensor like, whose end carries a
ring silver or gold, according to the characteristics of the operator. Must be
held at 45 ° with a vertical response balance corresponds to "yes" and
side to "no" swing. You can substitute any other dowsing instrument,
especially in field research.

h) **Pointers** - most of the times that an investigation made on a
graphic, plant or photo, it is necessary to target a particular place on
themselves. The pointers plus
Preferred are copper and ferrite;
one of the tips should be sharpened, of
so they are like a pencil.

i) **Compass** - indispensable instrument,
when using devices that
require guidance. Purchase of
preferably a compass with a box

52

big; the set allows a better assessment of the North sought.

j) **biometer Bovis - or rule**

biometrics . Developed by the dowser
French Antonie Bovis, its various scales allow
aferrir different values also clear the
original or biometric scale based on angstroms,
wave length measurement. any analysis
dowsing must be quantified, mensurada,
evaluated according to a numerical patterns,
referential, what It allows establish
comparisons.

There is a rather large number of dowsing devices for the most varied purposes, from
pendulums, through multiple rods, and even some appliances with power.

Note: Some dowsing instruments only give exceptional results in the hands of
inventors and some rare people who are tuned in well with the mental process that gave
rise to the development of the instrument.

Is essential to good quality of dowsing instruments which have a
careful execution and its forms are accurate reproductions of the originals. unhappily
is not that much of the time is available in the market but, as
all rules there are exceptions, one of the domestic manufacturers produce instruments
quality equal to or better than that manufactured in Europe.

Practice with several dowsing instruments

Dipstick:

The most traditional dowsing instrument has a certain difficulty in handling. Yet Today it is common in the hinterland the poser, to seek local to dig the well, make use traditional rod. In these cases it is used a rod made from a thin slice of tree, forked. The wooden rods are quite hard to bend in the position of use; for that reason for some time that are used rods made of other materials. In the last century they were Common rods whalebone; our century became manufactured in all materials from steel to plastic.

The rod must be held with both palms up dunks, while stresses therein.

As the pendulum dowsing and all other instruments, the response of the rod is based on voluntary or involuntary Mental operator convention.

Oral tradition and empirical knowledge poser imposed on the mental convention involuntary. And cosmopolitan, intellectual practices used to make a convention proposital mind. More refined, perhaps, but same result.

Water researchers have seen two opposing accept results of the rod as Positive: for some the steep slope to low indicates the place where the water is, and for others the inclination to top represents such a strong wave that surely indicates presence of water. "Tá seeing, tá seeing almost ripped the rod out of my hands," exclaims usually happy poser.

Safe under tension rod maintains a precarious balance; the smallest contraction practitioner muscular tension make escape moving to low or up, according with contraction.

This is a suitable instrument for external exploration, allowing walking rough terrain. It shows maps improper research or testimony, as It is normal in all types of internal work.

Dual-rod:

This type of rod 90 °, is preferred by all working in dowsing telluric research, inside or outside the houses imbalances. It presents a great facility of use. Simply keep the vertical grip and horizontal rods on the horizontal. The Mental accepted convention is crossing the rods indicates yes and departure from the same, no. And still possible to follow the movement of the pair to the right or to the left, indicating the way, for example, one came from water. It was quite used during the Vietnam War by American soldiers looking for bombs, camouflaged fences, hideouts underground etc. In a dual-rod of good quality, the friction of the rod with the handle must

54

be minimal, providing and fine instrument response. For external use recommend upper horizontal rods 30 cm.

Aurameter:

The aurameter is being used by all the luck of jugglers of dowsing with claim to detect chakras, aura etc. It was created so, for this instrument, a series of tics management, such as "download", rubbing it into the nearest wall. If you already thought poser had to "download" the rod each new attempt !! But for those who dominates the knowledge of the subtle human anatomy, this instrument is particularly suited to demonstration of this phenomenon, the speed of response. It is very easy to handle. A trained dowser has the power to detect everything that is hidden; this is indeed the perspicuous purpose of dowsing. A dowser is what evil does not exist or what You want to find. And other instruments, the aurameter points for Mental convention as the operator comes to detect. It has the disadvantage of being a horizontal out below rod, forcing an awkward middle position of the hand, sometimes causing imbalances involuntary.

Wolf antenna:

It is best known to Hartmann. Made from a brass wire 5mm diameter and one meter in length, this instrument is quite difficult to handle depending on the weight. Mental convention works.

It is maintained projected to the front, open hands, overturned and left under right to top. Being right hand, in the case of dexterous hands of the reaction, she will cause an imbalance projecting antenna to the right, when detection occurs.

Romani smaller as the antennas are most suitable for people of smaller size physical; Note that the mesh of the Romani is smaller than Hartmann.

Practice with the pendulum:

Surely, before starting work with the pendulum you will be taken by a sense of curiosity and insecurity, and will be wondering: will I'm able to practice dowsing, will I have special gifts for such an exercise? Relax. The vast majority of

People can practice dowsing! Of course, like any other activity that needs skill, some will be more capable than others, for example: anyone can play fiddle. Some have great difficulty rare and they will artless, mechanically; the vast majority He will play no more, and some will make the instrument its form of expression. All right, you say, but music is something tangible, and dowsing know how it works? Simpler physical explanation we can offer that will meet our needs at the time, is the next:

55

1. The human body, as generally known, has an energy field to its around. This field (called aura) ranges from a few centimeters to a few meters, and it can be measured by physical instruments.
2. Similarly, the earth has its own electromagnetic field, which can also be measured by physical instruments.
3. The human electromagnetic field (aura) is immersed in the "environmental field" or magnetic field.
4. There is an interaction between the two fields. So whatever happens in one will go affect the other.
5. If the human electric field is disturbed, changes are recorded in some way by the nervous system, and this turn creates an effect on the system neuromuscular.

This effect is then shown by the pendulum or other dowsing instruments appropriate.

From this point you go into un-extra sensory world where sense touch is more important than any of the other senses. The technique should dowsing obligatorily it is practiced within the strictest observance of defined rules, as This is not a practical fruit of a fertile imagination but a definite reality.

Dowsing tends to create distinguished two types of behavior: skepticism or exaggerated belief.

If you are trying to find something, you should not let your thoughts interfere.

When you catch a pendulum correctly, ie, between the thumb and forefinger of the hand right (if you are right-handed) or left hand (if left-handed), the pendulum will start move.

A pendulum can be made of wood, metal, glass or plastic. although relatively Again, plastic or any synthetic resin poden perfectly be used for this end.

Iron pendulums are particularly sensitive to magnetic fields, while copper They are sensitive to variations in electric field, however simple they are.

You may feel that this statement contradicts the explanation of the effects of the various types of thinking, however she will become clear later. For the moment, this explanation must be accepted.

The pendulum must be suspended by the hairs of silk, cotton, nylon line or thin current. Whatever the yarn material is advisable untwist, encerándolo twisting etc, related that when the pendulum is suspended, it will not enter rotation on itself.

It is recommended that the iniciante in a simple pendulum dowsing look to begin their practices; a spherical pendulum wooden or metal spin will be most suitable in the moment.

Our next step will be to learn how to use the pendulum and how to interpret their movements. Based on the principle that the question is always binary, nothing more logical to reduce the response also to binary codes. Example: I eat this fruit? The yes or no. Fulano reach the proposed initial goal? It's yes or no.

For this, we will code the response of our pendulum: Giro to the left (anti-hours), no, no answer. Turn to the right (clockwise), yes, positive response. Oscillation in any direction, no response was obtained; rephrase the question or redo it later.

You must take the pendulum between the forefinger and thumb, leaving the cord or the current I spare on with the other three fingers against the palm of his hand. The arm should be slightly separated from the body, the side lower than the pulse. The hand is slightly inclined for bass.

You should not rest your arm on the table, but may make you feel tired.

From this moment you will be using the body as a detection instrument, must, therefore, remain calm and work in a methodical way.

Never print the pendulum sudden movements in the attempt to get an answer more Fast. The whole process usually takes response for a iniciante, between 5 and 20 seconds. Do not forget that the movement of your hand should be involuntary.

The pendulum has no life. Just amplifies their neuromuscular movements. These movements reflect the inner world of man.

Mental attitude and practice dowsing

The old psychology believed that all mental life was a conscious phenomenon. Nevertheless the rise of physician Sigmund Freud in the early 1900s, revolutionized the world with its discovery of the "unconscious". This new concept brings light to the knowledge of the mechanisms of mental functioning both pathological and normal. We know today that our unconscious may contain information about almost everything around us.

Dowsing good mental attitude is critical for practice dowsing; all yes responses and are not contained in our unconscious, and through a reaction neuromuscular, reflected in the dowsing devices, can access them correctly.

To achieve a good mental attitude, you need to disconnect from the world aware to connect with the unconscious, and to achieve that it is necessary that all muscles relax body and mind; Several practices for both. We are going to also understand that there are various levels of relaxation, varying from the smoothest to the states of deep hypnosis. For good practice of dowsing, it is only necessary While a relaxation soft yet sufficient to disconnect the conscious. We should not promote deeper relaxations, as in dowsing, if on one side we need to be relaxed to free the unconscious world, on the other side we need to have attention on our dowsing search.

Even for the practitioner called physical dowsing is paramount perfect mastery of your mind and emotions consistent throughout the dowsing process.

The dowsing sense is innate in man and the dowser only has more developed because systematic training. This sense works on the intuitive level and should be expurgated the maximum possible interference of intellect and imagination. the dowser uses the intellect in the formation of the issues and the evaluation of responses and uses intuition through the dowsing faculty. Dowsing uses the above-sensory faculty Touch. The responses originating operator's own (unconscious) of collective unconscious, or Akasha, as the subject of the question.

Observe conditions for the practice of dowsing:

- A. Perfecta physical posture in handling the dowsing instrument.
- B. Do not work under the influence of mental or physical fatigue, emotional states or diseases. And advisable a state of physical relaxation.
- C. Avoiding physical, mental and spiritual influences susceptible hostile persons, sick, naysayers or emotionally unbalanced.
- D. Avoid disturbing or hostile work environment.

E. Check whether the issue is legitimate. The objective of the research should be well dowsed defined and should focus all their attention and win in seeking an effective result.

Mental Interference conscious. Reaching a state of impartiality in relation to addressed issues that may negatively influence the operator.

G. Use clear thinking, asking the question without any ambiguity. using right words, seeking to express more clearly the thinking wanted. It is very important to only one question at a time, which should be expressed simply, with a well-defined meaning, without ambiguities. If such question is made in a quiet way, she happens to your mind PRE-AWARE.

H. mental state question - this is the result of strong gains aware of the dowser to know the answers to the question analyzed. This strong auto-suggestion makes the operator sensitive to the native energy of the object, facilitating dialogue lies-body, through the neuromuscular reaction it will trigger the dowsing instrument.

I. Implementation of the previously formulated question. Spoken or mentally.

J. Mental Convention - is a convention that the operator sets him yet for instruments that respond according to a preestabelecido code. This act is fundamental importance for dowsing. Whenever execute a query, You should do as follows: I can eat this fruit? if you could, turn to the right; if he could not, turn to the left. This process must be repeated to all Sometimes you do have questions, until your mind gets used to the answer Positive is to the right and negative to the left. After some time his mind He will answer automatically. This training period will vary as the frequency.

K. passive standby state - is a state where the operator completely eliminates the notion of the outside world, persisting only the idea and vision of the objective of the investigation. This state of subjective neutrality is what allows tuning and uptake searched responses. Such a state is more easily obtained with practices meditation and relaxation.

L. Use the intellect to verify the meaning of the answers.

During long periods of detection, the pendulum will occasionally stop because a state of saturation operator (fading). We believe that this happens because of some form of fatigue, marking the limit of the sensitivity of the dowser.

This limit may vary according to operator status, and you should not attempt to make Serious scan jobs when you are sick, weak or tired.

Our next step is to choose the right length for the thread. Take the pendulum about 4 cm thread, place it on the palm of the free hand, expect into rotation; if that does not happen release wire 1 cm; repeat until the pendulum rotated. Redo the whole exercise to confirm the height found. Usually it is between 8 and 12 cm. Working with energies as tenuous as the dowser detects some factors They gain greater importance. And the case of the whole pendulum-operator when in tune, You will be in the ideal conditions for practice.

Polarization operator

If during practice occur often contradictory results, it is advisable to discover their individual polarity.

The human body is biased or positively or negatively and reactions Pendulum are affected by this polarity.

Polarity considered in dowsing is of the etheric body and nature biomagnetic. She varies with sex, but is equal in right and left handed. Physical polarity is bioelectrical nature. The two types of inverted polarity can occur together or isolation. In most cases the investment is not final.

There are special pendulums to detect polarities; one is the cylindrical pendulum depolarized, on which is glued a shirt with a helical coil with an angle of 30 degrees relative to the transverse axis. The second pendulum is composed of a small stick cylindrical on which is fixed a metallic spiral in the opposite direction of the corkscrew, for pendulum positive (+), and in that the corkscrew, for the pendulum negative (-).

Using pendulums with Hebraic words, Jean Gaston Bardet, creator of dowsing Cabbalistic, found that in the right hand thumb is positive and negative indicator (in left these polarities are opposite). The fact take the pendulum between the thumb and annuls indicator polarities, not transmitting these to the pendulum, improving practice dowsing.

First detected polarity.

Get a bar magnet on the table and place your forehead. Take a plastic pendulum and suspend it over the north pole (positive) of the magnet and enter the result. Do the same with the south pole (negative) and enter the result.

If the pendulum rotate clockwise when placed over the north pole (positive) and anti-clockwise, when placed over the south pole (negative), then you have polarity normal.

Responses future pendulum will probably be:

Clockwise: positive - yes.

Anti-clockwise: negative - no.

Second polarity detection method.

Use a depolarized cylindrical pendulum. In men, the palm of the left hand and the back of the right cause positive swing. In women, which has negative polarity, the swings are opposite in relation to man. This polarity is different from the physical polarity, in which men and women have the positive right hand and the left negative (the reverse in lefties).

Having discovered how your pendulum reacts, let's put it to work. We are going to make an experience that will enable you to check your own state of progress, as well as increase their confidence.

First, but what we prevent is that the first results can be confusing, to times.

This helps to make their difficult attempts, being distracted or not asking the questions properly or being tired.

We suggest you keep performing the exercises until you are happy with the progress has been achieved.

Do not expect a rate of 100% correct. Upon reaching the rate of 70% may already be considered that dowsing.

Experience:

Get six small envelopes and put some coffee powder in two of them, in other salt two remaining sugar.

Ask someone else to label envelopes A, B, C, D, Y and F; but she should know content of each.

Place the envelopes in a row on a table, which must be half a meter away from you. Choose one of them and place your forehead. Grabbing the pendulum about it, ask the Question:

" *The contents of this envelope is ... (Coffee), (sugar), (salt)?*" It means you will have to three questions for each envelope.

Make an outline to write down your results. Now, open the envelopes and confirm the results.

Experience the use of other materials other than coffee, salt or sugar. Repeat experience number of times.

supplementary exercises

Remember to use non-ambiguous questions when trying the following experiences:

1. And this (type of food) beneficial for my needs?

2. How many of these seeds germinate? (10%) (20%) (30%) etc ...?
3. This plant is a beneficial place?
4. I have some deficiency of vitamins or minerals?
5. How many capsules are necessary? (5, 4, 3, 2, 1)

Their daily practice

This is the simplest method and I have been going to all those who were my students in the last ten years. A good dowser is done PRACTICE !!, lots of practice, repeated countless times exercises; test whose result can not be confirmed in the end no value !!

Take a deck of cards, remove the figures, thus leaving only the cards that will be used as color coding. We, then, right?! Red cards and black cards.

Shuffle the cards, place your forehead on the table ten dunks cards for low and, one by one, investigate the color of the card, making Mental convention: This card is red? If it was red, tour to the right; If not, turn to the left. Those giving a positive answer, you moves to the front, still without giving them turns. In the end, turns all the cards and count your performance. From the moment he is hitting 7 cards in 10, and will be doing dowsing. Shuffle the cards and repeat the test as often as you can; do not give up, let your body gets used to the dowsing process. Intersperse this test with other experiences Nicer. Within your body you will gain the ability to identify the energies in the exact moment when his mind determined; especially not desist against the irregularities the answers.

We live surrounded by all kinds of energies, some beneficial and some harmful. The body's ability to perceive these energies and avoid some of them is a property of all living beings.

Humans possess this skill well developed, but due to intensive intellect, we many times we ignore.

If you want, you can use the pendulum to develop this sensitivity. And as you come becoming emotionally neutral, you perceive that their results will be progressively top.

Now, try to create their own experiences and questions, but never leave the pêndulo dominate his life, when only logical solutions should do. +

The witnesses

It is not always possible for the dowser be available at the exact time of investigation, the person, object or any other white matter of the investigation. That is It uses something that can represent either by homology or by analogy. This object takes name of witness. And is it that allows the dowser tune the target of the investigation resonance during the dowsing practice.

Tokens may be natural or synthetic. Natural evidence is obtained from

of samples from living things and the mineral kingdom. For example, a witness hair, blood, saliva etc. to find the person he belongs, or even diagnose it. A prospector water sample water, a sample of the same mineral to prospect mineral.

Synthetic evidence is obtained by synthesis from different elements those who will represent. Thus, for example, we can use photo or signature of a person, to diagnose.

Classification of accounts prepared by the House of Dowsing São Paulo, is He did classic:

natural	Biological (From the sample of living beings)	Isogenic. (Obtained from a subject equal to investigated: Isos = equal)
	Non-Biological (From minerals)	Tautogénica. (On a part of the material Original research: Tautos = same)
	Homologs (obtained from same material investigated: Homos = element comparison)	Iconic (obtained from photos, images and designs) from
synthetics	Analogs (obtained from like material investigated)	Lexical (obtained from words, signatures)
	heterologous (do not has resemblance to the object of the investigation; They are obtained by dowsing materialization.)	Pragmatic (obtained from things or those different objects They represent; for example, using a symbol to express quality (Pragmatos = object).)

Examples:

Nat./Bio./Iso. = Plant leaf to find plants of the same species.

Nat./Bio./Tauto. = Hair sample to diagnose the donor.

Nat./No-Bio./Iso. = Mineral sample to find the same mineral deposits.

Nat./No-Bio./Tauto. = Golden nugget to find the original wine of that nugget.

Sint./Homo. = Any synthetic material under investigation.

Sint./Ana. = Synthetic material for comparative study.

Sint./Ana./Icon. = Photograph person.

Sint./Ana./Lex. = Signature or business card.

Sint./Ana./Prag. = Tao symbol expressing balance.

It is still possible synthetic evidence obtained by impregnating on one carrier. The fastest and most effective technique was developed by Servranx brothers, Belgian dowsers; We are talking about the materialization or dowsing recovery. His work began in 1935 and only in 1944 they managed to reach the result now known. Input they used a circle to increase the vibration of the written word and, later, after an investigation with several other geometric shapes, discovered that greater energy concentration that produced Witness was the decagon (regular ten-sided polygon). In the chapter on graphics, readers will find more details on the decagon and use.

Never dispense use of testimonies during practice dowsing. For example, if you were analyzing every aspect of the life of any person, health, professional etc, keep the pendulum hold any kind of testimony of that person and, with the other hand, go indicating the possibilities to investigate; this way you only have in mind the subject of the proposed question. Also on analysis charts place the witness in the space for it, release the pendulum and wait for the answer. Always use the same type of method job; Only in this way your body gets used to practice dowsing.

Keep witnesses in small envelopes, with the name on the front. Do not leave your testimonies haphazardly on the desk, mixed with other testimony or objects, as these energy exchange it with each other.

The best witness is one that best represents the object of the investigation. Thus, better human testimonies are blood, saliva, hair; a lack, a picture, any Current photo; a picture of twenty years ago best represents the person at that time. Does not have photo, go handwritten passage card. It has nothing, make a synthetic testimony in the decagon, with name, date of birth. Please note that this testimony lasts only 72 hours. Work on a clean table, stripped of adorns without pyramids, crystals, protector santito,

incense smoke in the eye etc. Do not forget that you are working with very faint energies, virtually undetectable. Do not give up

Multiple applications of dowsing

One can say that dowsing finds application in all fields of knowledge human. As the proposed questions, surely they vary instruments and research techniques to be adopted, but a dowser always well trained positively contribute in any investigation.

I have here some typical applications of dowsing:

1. hidromineral prospection (oldest application of dowsing) - Location water and mineral veins.
2. Agricultural research - analysis of soil, seed selection, agricultural orientation.
3. Geobiology research - detection of harmful energies telluric origin of grid, problems related to architecture. Choosing local, shapes and materials for construction of ecological character.
- Four. Homeopathic Research - allows the choice of homeopathic remedies, your dynamic, dosage and duration of treatment.
5. criminology research - locating missing, abducted and

criminals.

- 6 Psychological research - professional evaluation of candidates for office, evaluation psychological disturbances.

hidromineral prospection

The text of this chapter is mostly the result of collaboration geologist Marcos Alves de Almeida.

As already mentioned, in the first period of its history, dowsing was allocated on hidromineral all the research.

The different methods were created and used through time for this task.

Two methods or sets of distinguished methods can be used in prospecting hidromineral or dowsing field. The first uses the set of theories Abbot Mermet and is part of the so-called physical dowsing. The other method is the mental dowsing, in which the mental interrogation and mental convention are the mechanisms fundamental to the success of the practice.

Moving water or underground waterways provide emanations more intense than the backwaters, be they of wells or cavities. Two types of instruments dowsing can be used for research: the rods and pendulums. by rods we mean any type of rod: the traditional fork, dual rod, the aurameter or any other rod. (The aurameter, created by Verne Cameron, was originally an instrument Water for research.) Outdoor is preferable to use such instruments, depending on the irregularity of the terrain and wind. If the dowser feel greater affinity

with the pendulum, it is advisable to have two or three pendulums with varying weights so that it can I choose the most appropriate depending on the conditions existing research. pendulums for hidromineral dowsing must have increased the weight for internal use. I also know advised to use long wire, which will produce faster with heavy pendulums turn.

Traditional research method loco

Upon entering a given point on the ground, with the "good hand" taking the pendulum and with the other arm extended forming an antenna, the dowser must make the following question: "Which way is the water" while turning on itself still maintaining the concentration while doing so. At one point the pendulum enter into rotation. Mark address found using a visual reference or by a marking on the floor. go now to a distant point of initial and repeat. The crossing of the two directions It indicates where to drill. The same method can be used with the dowsing rod. For refine detection, or more accurately set point drilling, split dot crossing the lines previously found and imagine a large circle whose center is the place, with a radius of 15 to 30 meters. Now walk around the circle at two opposite points, the pendulum will rotate; draw a line connecting these points; will, thus, the direction of the course underground water. Right now that path, using as above the pendulum or rod, seeking to confirm the exact point to be drilled.

67

Depth calculation.

According to Abbot Mermet, at the height corresponding to the height of a man standing on the place of the water source magnetic layers that indicate the depth are formed which located aforementioned water. It begins by lifting the pendulum the highest possible; and to lower the pendulum go through depth corresponding to the magnetic layers, and the pendulum hitherto still initiates a corresponding movement to the number of series and rotations on water.

At eye level indicates a depth of 40 to 50 m.

At the height of the waist, it indicates water at 100 m.

The knees, indicates water between 200 and 250 m.

And by the ankles, the water is 300 to 400 m.

This method was used for decades by many researchers, and also recommended by several authors work on dowsing.

Hit the foot method to determine water depth.

While the dowser standing on the site of the underground water source, and the rotating pendulum, hit with one foot on the ground at a specified rate; a certain measure must be established and related to each hit, for example, 1 meter blow or, if the depth is large, two to three meters. By the time the coup match the depth of the well, the pendulum changes its movement pattern. In the case of operator do not get hit foot without affecting the movement of the pendulum, using the recommended dowsing rod. It is clear that this method is a code of access to the unconscious, where each stroke represents an energy step of total depth by still unknown aware of the dowser.

The first dowser dowsing known to practice with success the distance was the abbot Mermet. Some others may have done at the same time, but the size of the abbot forever overshadowed others. I using mental dowsing, curious fact in the case of man who created the first theories for physical dowsing, Mermet detected on any plant was brought to where he could drill a well, including giving the flow and water quality.

Several different methods can be used, and this more depending on the characteristics Operator any technical implication.

Outside the plant, if possible oriented as it was in the place of origin, release the pendulum from one of the margins in either direction, while keeping in mind to issue " what direction the water is? ", " Which way is water one came? "etc. Slowly balance suspended pendulum long thread is addressed to a particular

68

angle; when finally stabilized indicate the address found. Repeat to from another point in the margins. Once the new address on the map, the point of intersection of the two lines indicates the point sought. Any variation to this coordinate system can be used. To determine the depth, use a scale number, or a simple rule of 50 cm.

Groundwater prospecting.

The investigation of groundwater in the earth's crust, deep underground, will be fundamental importance the next millennium. Subsurface water in the soil layer It covers the rocks, is, in general, contaminated by the disorderly occupation of the big cities. In the field, the use of fertilizers and insecticides used on earth and reused by tens and hundreds of years, cause water pollution of groundwater, located underground. underground waste without recycling, is commonly seen on the coasts drains, on the outskirts, where "no" is watching. That waste is transported by rainwater, drainage down to brooks, carrying him into small rivers and these finally to the major rivers, polucionando entire drainage basin water scavenger a vast region. These rivers feed the dams that supply us with water. This vicious cycle has a single result: rampant pollution of all drinking water available at the surface and Subsurface. In the meantime, the old underground water research in subsurface is He becomes obsolete and inefficient, with the frightening picture of rampant occupation. only remote locations is still possible to find potable water in some places, where there are septic tanks or cities in the headwaters of rivers. In the last two decades, seeking groundwater became intense. Large industries, hospitals, shopping malls, entire neighborhoods need a lot of water make holes through drilling, to great depths, reaching bedrock, where water is investigated currently. Crystalline rocks are large-storing drinking water. Nevertheless, find water on these rocks requires prior knowledge of geology and related sciences, described below. The new method of prospecting groundwater does not seek water itself, but where it is housed. Then the knowledge of those places is necessary kitchen Accessories water.

Traditional method of dowsing in the search for groundwater

Ancient groundwater research was based entirely on prospecting water itself. It is not concerned with where they were stored. Where theoretically deduced Water was staying through the behavior of water and not the other. Thus, "were created" the Where water was found, contrary to the basic principles of geology, meteorology structural, geo-hydrology and other sciences. dowsing fundamental books of practice, as of Saevarius show complicated shapes of the detection of water. It is noted that techniques, sometimes successful, require an adaptation for each type of person who will go to develop the method. Also the way he and several researchers imagine how involves the reservoir in which the water is, in most of the time, it has nothing to do with reality, and it's not fantasies performed by laypersons, who do not understand the subsoil.

Subsurface water, in the floor surface change, the depths vary between 5 and 40 meters, dowsing various mechanisms and methods work very well. It is noteworthy that, at great depths, and in the rock, these methods are not as accurate, empirical, meaning to be correct that the source is in the right place. In truth, the search was casual, So when looking for the rod or fork, the dowser walks aimlessly, touring the area the whole for a reaction of the fork. The search is on time. The dowser thinks which is "to exist" water only and only in that place the fork indicated and no other place. To the layman, the water occurs punctually, as in a funnel. Lack of knowledge, They argue that it is a cross vein water. Other times, they imagine a source or current ' "Sinfonante" water in the form of one judgment came as a tube or hose cave was filled with water, winding, following the irregular surface of the ground. Most commonly assumed be a lake underground water, as an empty underground water containing lens. Noting explanatory drawings verified that they imagine that there is a closed lake in a lens in the rock or underground. Sometimes they imagine a lake of water in a cave, with open spaces on the surface of the water. In fact, that can happen in karstic environment, developed in limestone, the dissolution of the rock due to the reaction between the calcium carbonate, carbon dioxide and water to form carbonic acid, which dissolves the rock. But that kind of morphology is seen on the surface of the region of study, or through aerial photographs or on the premises. Large sinkholes are formed in lakes arredondados the land's surface. sinks rivers are also observed, ie, rivers disappearing into the surface. In the valley of the Ribeira de Iguape River, the caves and Devil Santana show these evidence.

Water

The water comes from the surface through the rains that fall to the continent. Can come from the melting of large glaciers in the Arctic regions. Water enters the mountains, on the floor of alteration. Penetrates existing fractures in rocks and crosses kilometers, reaching great depths. Water, to penetrate the fractures of rocks, it is made Mineralized. Depending on where it accumulates absorbs mineral salts present in those rocks, which give special qualities to the water. Drainage basins are fed by the rain water which accumulates in the main drains generating streams and these form small and large rivers. Excess water penetrates the soil to the level of the rocks, forming the groundwater or soil hydrostatically. The tendency of water is to occupy the lower places, where it accumulates. The water cycle ends in ocean levels.

New method of prospecting groundwater

The new method of prospecting for groundwater takes into account a basic knowledge of the earth's crust and its geological features. Water penetrates the soil and soil are variabais and complex permeable to impermeable. The floors are overlapping rocks. OR are derived from the rocks themselves suffered physical alterations (mechanical breakdown), chemical (Leaching and alteration of its constituents by the presence of water acidity or basicities varied), physicochemical and biological (formation of a blanket of plant residues and waste

animals). Consolidated in an ancient geological period tensions and suffered huge rocks compressions that allowed bankruptcy, through large tectonic movements, generating faults, joints and fractures. These discontinuities were, in many cases filled by surface water, accumulating at great depths. This study has the develop research function fractures that accumulate water in crystalline rocks in great depths. a method of water determination was also developed in soils Subsurface and horizontalizadas rocks called sedimentary rocks. Research soils and sedimentary rocks resembles; however changes the reference point. The sedimentary rocks research where water accumulates, occurs at greater depths, can reach hundreds to a thousand meters deep. While in soils Subsurface depth not surpasses the 50 meters; There are exceptions.

basic material used in the investigation of groundwater

The basic material used is divided into two types: technical material and radiesthesic material.

Technical material:

- a) **Field notebook** : for annotations direct observations in the field.
- b) **Compass** : the type used in ships, with the base which contains the geographical data (North-south-west you read) mobile, non-fixed like most simple compasses sold in the market. Compasses fixed base give an orientation opposite. HE makes an countersigned for this, but what appears in the viewfinder is an orientation for West. People may think they are going to west, but in truth, They are going for this. Take very careful what management compasses. They also they must be declined because the magnetic north (far west) does not match the geographic north (far east). Or use a technique compass type geologist Brunton or Clar, more accurate but complex technical management.
- c) **Topographic plants** : in the region to be studied. These plants allow a study more detailed of the region to be studied. accidents are observed Geographic: rivers, hills, drainage basins.
- d) **Geological map of the region** : when there are these maps, research becomes more efficient. You can see the rock types and structures affecting these rocks. So you can, to distance, identify possible fractures warehousing water, mainly in crystalline rocks.
- e) **geomorphological map of the region** : with this map can be viewed in the distance, regional landforms, drainage network, the type of hills, headlands and saws, alignment of ridges of the hills and mountains and countless information from the surface of the reliefs. It is an essential map; without

the place where it will be investigated, but with map in hand to be a vision regional complement.

- f) **Aerial photographs** . Various scales of 1: 8,000, 1: 25,000 or 1: 60,000. When get those photos of the region of study, can be traced the lineaments fotointerpretados and subsequently verified in the field. Research is done extremely accurate, because the vision is who is watching from above, of a airplane.
- g) **satellite imagery and radar mosaics**. They comprise vast region. Usually are at very small scales (1: 100,000, 1: 250,000 to 1: 500,000). They are useful for identify the broad outlines of the relief, as extensive lineaments and systems regional fracturing, large geological massifs and big rivers and watersheds. They are not essential, when researching into small land, but are extremely useful when a whole municipality is investigated, by example.

radiesthesic Material

- h) **common Péndulo** : wooden floors terrain.
- i) **common metal pendulum** (about 40 grams) for field research. Plus heavy, does not suffer due to wind movements.
- j) **equatorial-unit Pendulum** : Jean de La Foye. Very sensible. Spectrum captures "Waveforms" in undifferentiated, magnetic and electric phases.
- k) **Pendulum for dowsing cabalistic** : the written word in Hebrew square:
"Sprout water!" That pendulum is useful when the fracture or local was located and where finds water.
- l) **Dual rod** : useful for fractures found instrument. Al walks on the ground, already possession of geological-structural information, and knowing beforehand direction of the fracture, anda perpendicularly to this and, by crossing the dual rod It is opened or closed, according to the codes established for each dowser.
- m) **The fork "Y"** locate points. On land, a plan has infinite points.
Use it to locate fractures, which are inclined planes, the great depths, projecting lines on the surface and is not convenient. The fork
It works in search of groundwater in soil. The dowser walks chaotically in the field to search for a point where there is a indicative abnormality presence of water.

auxiliary graphics

Many graphics can be created, as science advances in discoveries abnormalities that reflect the presence of water in the bedrock or subsurface, so direct or indirect.

Bovis biometer : dowsing rule allows measuring wave length in angstroms (units dowsing) bovis.

Difference meter
spontaneous potential
millivolts / meter: has the measuring function abnormalities electromagnetic issued by discontinuities geological, indicative of presence of fractures, geological faults, contacts between rock types different. abnormalities indicated may suggest the presence from Water contained in those discontinuities.

Measurer from waves
Electromagnetic : low frequency. present long wave length (In angstroms) which they are measures HERTZ (Hz). They range from 3 to 300 Hz. They are indicative from abnormalities electromagnetic associated with the presence of underground water. The frequency in hertz is inversely proportional the wavelength Angstrom.

**Measurer from countryside
induced natural electrical:**

The unit is kilovolt
ampere (KVA = kilowatts).
The presence of water
forming an underground
dipole, generates a field
induced natural electrical.

**Measurer from countryside
magnetic natural**

induced : the unit is in
nanoTesla (nT). that field
It is generated in the presence
groundwater.

**Measuring the amount of
water:** in volume,

It can be concentrated
in the storage tank
and probable measurement
flow / m3.

Depth meter
probable from the
water concentration
the container (m).

Meter ionization conditions: (for places and for living things) Jacques La Maya.
(+) Values: positive or malefic. Values (-): negative or good. This chart has the function of identify the presence of harmful positive ions from place. In the presence of groundwater moving, geological faults and fractures, electric and magnetic fields, radioactivity, microwave, air conditioning, ceiling fans indoors, local closed for a long time and countless harmful anomalies can be identified, both natural and the domóticas. positive ions attempt to balance acting on cells of people in the attempt to incorporate an electron, for example in the field of forces, that affect cells, desequilibrandolas.

Graph for determining the percentage Yin / Yang: Jacques La Maya.
0: Neutrality Yin / Yang acceptable balance: -10 to 10.

This chart has the function check if a place has excess energy. Yin energy above -10 it indicates that the location is "stealing" energy of living organisms (animals, plants and Humans). and unhealthy places thereof recited above. While energy Yang excessively with stifling local indicates energy, for example, climbing on Mt. Everest, almost 9,000 meters high. The energy of a place can not be excessive (Yang) or low (Yin). It is a very good place with Yang energy to 25: microclimate mountain or a beach, for example. In areas with groundwater graph indicates the maximum Yin.

Conveyor grades : useful for determining the slope of the fracture where staying groundwater.

Adding all this data, you can increase the degree of success in research underground water.

Subsoil water

Soil characteristics:

The soil is defined as a collection of natural bodies that occur on the surface Earth, containing live and supporting or being capable of supporting plant material. And the layer surface of the earth's crust that sustain and nourish plants.

This thin layer is composed of rock particles in different layers of disaggregation water, chemicals in solution, air, living organisms and organic matter distinguished decomposition phases.

Factors of soil formation. Weathering called, include also the physical forces resulting in the disintegration of rocks, altering chemical reactions composition of rocks and minerals, and biological forces resulting in a intensification of the physical and chemical forces.

The main factors in soil formation are the original material, climate, activity biological living organisms, topography and time.

The original material is represented by the various types of rocks that suffered mechanical disaggregation and chemical weathering, forming soils.

The climate is represented by rain and temperature.

Living organisms , represented by the action of microorganisms in the soil, have the function of decomposing plant debris and earth revirar.

The topography influences by the transverse and lateral movement of water. The relief, steeper slopes, may have a less thick soil in valleys embedded and flattened. many differentiated and inverted situations may occur.

The time has fundamental influence. It represents the interval of time acted modification factors that surface layer covers the substrate rocky. Greater time an amount of water can act on the surface

Rock, altering, increasing the thickness of soil disturbance.

The soil is generally divided into three main horizons A, B and C.

Horizon A: is the horizon where the organic matter accumulates, the mantle Weathering. That horizon, presents the darker color of black ash is more clayey, that is softer to the touch. It protects the soil from erosion caused by rains forming grooves in the surface. It is emphasized that the soil can be different from that described.

Horizon B : located below Weathering mantle. That horizon is composed of unbundled floor, and it is composed of different materials, according to the alteration of the rocks existing in the region. That may have varied soil composition and generally "Washing" of the surface water, which penetrates through cracks and pores by the interstitial soil.

Horizon C : is composed of the altered rock, and in advanced physical disaggregation and chemical leaching caused by the water acting on the floor. However, it still preserves the original rock structures.

Down that soil is rocky substrate in the overall waterproof Subsurface water penetration. state rocks are found.

The water to be investigated is in the complex soil. In general, the provision of underground water is associated with the distribution of rainfall in the region, providing supply sources: surface water and groundwater. The water surface is available streams, rivers, lakes, reservoirs and dams. The underground consists napas phreatic and removed directly from wells and sources. The main problems water conservation are related to quantity and quality. As we explained in Initially, the soil will contain less water and lower quality due to urbanization and uncontrolled industrialization. Another factor reduction and water pollution is the deforestation, causing surface erosion and intensifies. Not having vegetation cover, water runs on the surface causing flooding and bringing nutrients to the rivers. He subsoil is the hydrostatic level decreased, sometimes making dry soil. A good water conservation program, to ensure household and industrial water supply, should It is based on reforestation and the protection of natural vegetation in the soil conservation, the flood control and conservation microfaunal living in Weathering mantle. Within that box, a search of drinking water in the subsoil is problematic in principle and uninteresting. The identification of water in the

subsoil has an interest in regards to the health of plants, animals and humans. Insanitary places with groundwater movement is not perceived by the people in general. However, profoundly it affects their daily lives. cause insomnia, bad be, nervousness, and various diseases. The present technique, to be presented, has function to identify the anomalies caused by moving groundwater located underground. And, of course, also it serves to find itself potable water. In that sense, knowledge of the surface relief and use of knowledge geomorphology, topography, drainage networks found in the region studies, and allow the researcher to have a preview of subsurface conditions. That knowledge can "see" a priori, as groundwater will be moving in every situation, in valleys, on the slopes stockings, high in the hills. Soil types,

covering the rocks, they can suggest whether there will be higher or lower water concentration. By example: a sandy soil, quartz, whitish to beige, suggests that there will be concentration of water in deep, reaching the level of the surface of the rock. It is a porous soil, and the water passes between the interstices of the grains. While the clay soil, colorado, when it rains the ground is slippery and probably will not accumulate water in depth. Unless there is a sandy sector average depth or contact rock. Also by the steepness of the slope you can "will discover" where you accrue more Water. In that sense, common sense is enough: in places less inclination will accumulate more water than more inclined places. Not always! There may be accumulating on average slope, depending on the structures of rocks, for example, a rocky syncline subsoil below. (The **syncline** is a concave part of a fold of the earth 's crust due to the compressive forces of an orogenic movement.) Take care!

As seen, it is not possible to establish a single criterion; nature is complex and researcher has to walk in the field in detail, on each edge, looking outcrops soil or rock exposed in road cuts etc. Many times the information of a place They are found in another, where you can see the soil characteristics, as in the ground be investigated, flat, most of the time you can not see anything. This overview should already belong to the researcher, who scrutinizes and observes the workplace.

But the main work is done by the dowsing perception, for exactly local house, apartment, business, industry, unverifiable information up, because everything is asphalted, cemented and built. However, the researcher and He studied compared to places he already researched and has already determined some parameters. Dowsing these parameters, obtained in controlled locations, serve as model observation places where you can not directly observe. But the models are models and in every place there are changes, because nature is dynamic and not static, as it seems be for a lay observer. The sight of rational investigator is obtained form regional, to be idea frame of the large area from the study. Besides that, before reached in the research area, on the road, observe the landforms and the geographical situation directly.

Prospecting of groundwater in the basement - local view

This research studies the local can be used for locating water and / or of insanitary because of that water. The technique is the same.

Research potable groundwater in the subsoil of land

It is analyzed from the entrance ground with the rule Bovis. If there groundwater, rule will acknowledge a decrease of energy, for example, passed to 2,000 Å. It goes further and goes verifying that the energy spent to 2,500 Å. In another place, he passed for 1,000 Å. And in another, for 6,500 Å.

It notes that energy, wavelength 1000 Å, may have as much water or moving water.

That preliminary assessment allows be an idea of the energy emitted by.

Then a site plan is achieved, with the labeled magnetic north. It is Power the plane in decagono for twenty minutes, to increase the resonance of the place testimony, which is the own plane.

Then a graph is plotted on the ground, forming squares 2.5 cm on a side, for example. These measures depend on the size of the plant and the level of detail you want arrive.

Now the work happens on the ground. At each crossing of lines measured quadratic the energy emitted with the biometer Bovis (Figures 46 and 48).

After writing the energy emitted at each crossing lines are drawn the isofrecuencia curves (iso = equal frequency).

To be certain that the energy emitted by the subsoil even underground water, uses the graph microfrecuencia or spontaneous potential difference (in millivolts / meter).

This chart will indicate the most frequently in places of greater concentration of water in movement.

How the amount of water by volume, the volume and flow graph / meter is used cubic; and how the depth chart depth in meters.

Can be built, in large areas such as a cottage, a map of isoflujos (the amount of water that can be extracted per cubic meter) or isovolumetric (the amount of water by volume) and simultaneously an isometric map (the depth at which the surface is larger water volume).

data for all graphs are compared and verified it is cohere in results.

When these maps are compared, it is concluded where is the best place to open the common well or semi-artesian. Do not panic, research is laborious and time-consuming, but the compensation is success.

If there is any external influence, ie, the dowser, anxious himself, tries, unconsciously influence the results, it will be compensated by crossing various graphics.

another situation may occur: measurements can indicate another type of anomaly. In those cases, and still not knowing, graphics ionizing radiation are used for measuring the presence of gas Radon positive side.

Complementary graphics electric and magnetic fields are useful in the sense that, in premises where there is groundwater, experience has shown, a field is formed induced natural electrical. This electric field generates a magnetic field. Must be verified the results cautiously. Other anomalies also generate electric and magnetic fields. As, for example, a failure transcorrente cutting surface region. These are areas

deep suture affecting Earth in ancient times, for example, at the time Cambro-Ordovician, there are 400 million years.

Analysis of Figures 46 and 48

Figure 46 - a measure of units are labeled in each crossing lines quadratic Bovis.

isofrecuencia curves of 6,500 Å to 3,000 Å were drawn, separating strips.

It is observed that the energy decreases to the north, reaching the smallest values 2500 Å on the lower left end of the field analyzed. That means there is an increase in water velocity in that direction, suggesting a greater amount of water to that side.

To be more certain graphic spontaneous potential is used. It is noted that increases the potential of 0 mV / m in the region 6,500 Å and increases until 75mV / m in 3,000 local and 2,500 Å .. It is perceived that there is a relationship with the decrease in units Bovis, suggesting having higher water velocity and, in principle, more water. Must be Probing BORED do well in that place or

Figure 48 - the same above principle was used.

It is perceived that the water pipeline passes obliquely through the field, cutting the residence principal.

Regular place with 5,500 Bovis, is north of the land. in the left corner higher.

The tendency of the direction of movement of water is indicated by the arrow.

The energy emitted by the water pipeline ranges from 1,500 Å to 1,000 Å, central diagonal strip the drawing. In that location, further west, you should check the drillhole bored or waterhole (Bottom left).

How to unhealthiness, wrongly it perceived that built the main residence. But the neighbor, north, live in a better place. Home and live in a better place (5,000 Å).

This situation requires an adequate study of the land and determine the best solution for build the main house. It should study the terrain before construction. Good for water concentrate, unfavorable to live.

Prospecting of groundwater in the bedrock on rocks

Prospecting groundwater in rocks requires more careful observations, for each rock type behaves differently and concentrated water own way. Must be have knowledge of structural geology for the analysis of fracturing systems They affected the rocks. Knowledge of the types of rocks is also of fundamental importance. Dowsing knowledge completes the picture. The descriptions of the rocks have only the character to show the complexity of the study. A basic literature indicated the end of the book, you can target readers who wish to study.

Sedimentary rocks

The sedimentary rocks are formed by transport of sediments resulting from disaggregation of pre-existing rocks. These sediments are transported by various agents to lower levels due to gravity, where they are deposited. sediments transported from source to reach the place where they are deposited (basins), suffer influence of physical, chemical, physicochemical and biological variables. They act in the source area, in transportation, in the medium in which they are deposited and then the tank itself pellet (diagenesis: litification or hardening of sediments with the weight of the reservoir below [superposed] and water loss).

Source area : is the geographical lugarl where, under the action of the agents mentioned above Weathering and erosion of pre-existing rocks occurs. Unbundled material transported and transformation, deposited at the end, generates sediments.

Climate: related to temperature, which generates wet, dry, arid climates, hot cold.

Tectonic: generates basins, mountains, fractures, faults, joints. They are forces acting on rocks during its formation and existence. Main acting agents are temperature, pressure and countless other factors (chemical composition, hardness, strength, Eh, pH etc.)

Sediments : refer to broken material in the form of grains, of granulometry varied from clay, silt, fine sand, medium sand, coarse sand, granules, pebbles, and blocks mutations. These grains disaggregated and transported by agents such as rivers, glaciers, wind, rain are deposited in the form of deposits in local and earrings Morros (cones excretion), lakes, riverbeds and floodplains, lagoons (INTERMARES) and the tides. Also they form dunes due to transport sand, siliceous sediments by wind (wind action).

All these various types of sediments are transported and accumulated in the form of deposits. Consolidated (curable water loss: the process suffer litification due in part to the weight of the deposited material) and transformed into sedimentary rock.

Sedimentary rock is varied formats, mainly sub strata tabular horizontal. These strata seem stacked books on each other. These rocks are complex due to the wide variety of environments that generated; However, for our purposes,

which is prospecting for groundwater, there is no need for a large geological knowledge such rock. It should know that the deposited layers are sub-horizontal; they behave similarly to Subsurface soil, being that the latter contains unconsolidated sediments in the form (beans are loose, broken), while the rocks sedimentary are hardened (you lithified).

dowsing for locating a deep, sandy layer is used, with grains quartz as a buffer drinking groundwater eye, surrounded by layers

argillosas, raincoats, one above and one below. These impermeable strata allow the water contained in the sand layer, intermediary, not escape, but is confined. It uses same technique for locating underground water; however, it should be noted that research in rock sediment occurs at great depths. The dowser must distinguish finding groundwater in rock and not capture the groundwater, usually contaminated. Research in sedimentary rock occurs in general in area sub-horizontally; therefore, you should walk in search of local higher concentration. The dowsing rod "Y" can be used, as water occurs in the extension area, reflected on the surface of the ground; therefore, you can choose the best place to do drilling subterranean well. The method isofrecuencia curves (Figures 46 and 48) will extremely useful.

Igneous and metamorphic rocks rocks

Metamorphic rocks were formed from the beginning of the consolidation Crust Earth, as there datings of metamorphic rocks 3 trillion years to the period very recent, derived from igneous, sedimentary and metamorphic own. In all geological epochs the three types of rocks formed. rocks were formed in ocean environments, from the coast, platforms, continental, embankments and abyssal. Other ancient environments sedimentation, such as desert, glacial, fluvial, lacustrine and lagoonal, cones excretion and other sedimentary rocks metamorphosed also generated. Also other rocks metamorphic were transformed into other types of metamorphic rocks and granitic rocks, igneous, metamorphic rocks became. It is that they are extremely complex rocks.

Metamorphic rocks were generated in the solid state, pre-existing rocks, sediment, metamorphic or igneous origin. These rocks underwent stress generated by pressure directed and temperature. Pre-existing old rocks modified, folded and redoubled, state, ductile to brittle-ductile. There was formation of new minerals by chemical reactions, or That is, the pre-existing rocks were affected metamorphism and are generating modified new rocks.

Igneous or magmatic rocks were formed the great depths and invaded the crust melt as viscous fluid. The temperature is the main agent formation of these rocks. high temperatures are formed around 900 ° C, more viscous, as, for example, granite, granodioritas and dacite; to about 1200 ° to 1400 ° C, more fluid, such as volcanic rocks, basalts, gabbros and diabásicas. These rocks were generated between 800 and 500 million years ago in the biggest event of volcanism and there was granitisation Tectonic differentiation in the Brazilian craton. However, in all geological epochs, Igneous these events affected the earth's crust.

We found both volcanic rocks, mafic and ultramafic as formed more than two trillion years, as newly formed volcanic rocks, for example, in Iceland.
Metamorphic rocks, in general, have oriented, foliate, flocks structures, xistos

etc, igneous rocks are homogeneous structure, are solid. These rocks do not accumulate water naturally. No water is inside.

About 450 million years ago, in geological times called Cambrian and Ordovician, rocks, consolidated, hardened, experienced a tectonic event which affected Earth's crust around the globe. At this stage the rocks suffered directed pressures the broke, generating faulting areas transcorrentes and all pre-existing rocks They were affected (Figure 50 - Table I). These tectonic movements "broken" rocks, Just as a block of rock in a test pressure forces (FIGURE 51).

Those efforts that affected the rocks, breaking them, generated fractures of various types, being one of fracture types accumulates drinking / mineral groundwater (FIGURE 50 - Table II). In the drawing, fractures are bold, parallel to the tectonic stress, It sigma represented by the symbol σ_1 . In Table III, it is exemplified a potential model Tectonic systems for fractures, the fracture being likely to contain water It is parallel to the σ_1 (dl).

Table IV of the same figure, subsequent events that affected the observed Earth's crust, and in the Mesozoic Era, between the Jurassic and Cretaceous, makes 160-112 million years. There was tectonic folding of the cortex, generating structural high; saws Mantiqueira and Sea were shaped by those events, as can be seen in Table V. It Look at the model of the formation Taubaté Basin, observable in the Via Dutra, heading for Rio de Janeiro. That event occurred 35-5 million years ago in the Cenozoic (Tertiary), in times between the Oligocene and Miocene. Table VI, as you can expect, old fractures seen in Table II, ended up being displaced relative to each other complicating the tectonic model. It is observed that the old fracture groundwater was displaced (dashed double line with the path).

The work of the dowser is locating these fractures that were opened and accumulated water. In that sense, knowledge of Structural Geology and Tectonics is of great value, but with the help of dowsing, effective and faster positive results than others methods. They can also be used geophysics, electrical methods, potential difference spontaneous and resistivity.

Types of fractures: a) fracture cinzalhamento; b) Fracture relief; c) Breaking extension
(Parallel to the principal stress)

Figure A - Block rock stress test. Three compressive forces affect the block:
 σ_1 (1), greater than σ_2 (2), greater than σ_3 (3).

Figure 51

Research groundwater in crystalline rocks

The investigation of groundwater in crystalline rocks, no, dispenses knowledge cited above, but now we will analyze the real situation.

We find, for example, on flat terrain, no elevation or depression. The question is like discovering the fracture parallel to the tectonic extension efforts

It occurred 400 million years ago? Based on Figure 52, we will accompany a sequence of procedures to find fracturing systems from the study. The

Figure 52 presents six pictures, two by two. Tables I and II refer to the local plants and regional. Local is the company investigated and regional local terrain insert Table I in the regional context. Tables III and IV refer to the analysis of data from Phase previous. Tables V and VI relate to the interpretation of data and diagnosing characteristics of fractures and the field study.

Tables I and II relate to the field observations

Assuming that the person does not know the possible direction of fracturing the site. Must be ande in a certain direction, for example, east-west (Caminhamento 1) (Table I). He instrument used in this phase is the DUAL ROD! As already mentioned, this is a Very easy to use and well suited for this type of research tool, and like any another dowsing instrument responds to a stimulus as a mental convention.

Keep the two rods in "L" parallel to the front, with arms in the lowered position, bending your elbows. While mentally wonders about the location of the fracture, keep walking easy, however in a state of concentration. When it finds a fracture, usually it is subvertical tilted and the ground surface it appears as a lineamento cutting that surface. DUAL ROD open in the direction of the fracture (One rotaciona rod for the right and one to the left as the angle of the fracture detected), regardless of the angle it will affect the fracture relative to its east-west direction. Fracture, for example, may be in the NW-IF position, as in Table I. Mark point in the ground. Then you should go to another point on the ground, but now you will walk perpendicular to the fracture recognized the initial point, then marking the point 2. Then walk further and find another point on the same fracture, marking the point 3. That way you characterized the fracture I, verifying its projection on the horizontal, ie which strip it occupies. Now need to know if this strip, this fracture, fracture extension, water-storing, or it is a fracture, fracture cinzalhamento or push, perpendicular to the extension. That is the question !!! If the ground is very large, a gigantic factory, there is a chance you find another fracture and thus get now mount puzzle. But you still need to visit the place completely, but not disorderly.

Then walk on the north-south (caminhamento 4) and apply the same direction above procedure, as in the example of Figure 52, Table I, Fracture I. Now you

He found another fracture. DUAL ROD rotate in the direction of the fracture in the case in the NW-SE direction. Determine then points 5 and 6 and characterized Fracture II.

Placing the transferor in degrees, perpendicular to the fracture, the direction is determined and degrees of immersion of the fracture. I see that the fracture immersed for 70 ° northeast (NE) and II fracture immersed 80 ° to the west-southwest (WSW).

Noting Table II below in Table I, like Figure 52, you have a vision regional where the terrain is inserted. It is observed that the regional level shows the effects Tectonic in a vast region. Therefore not restricted to observing only the field of research, without any opportunity to study a larger region.

Tables III and IV relate the data analysis:

After locating fractures in field research, we will analyze the eight points chosen. Points 1 and 2 in the fracture I, points 3 and 4 on Fracture II and points 5, 6, 7 and 8, on the ground outside fractures. At that time we will use the auxiliary graphics:

- 1. Difference spontaneous potential in millivolts per meter (mV / m):
- 2. Electromagnetic waves, low frequency in Hertz (Hz);
- 3. Electric field in quilovolt-ampere (KVA);
- 4. Magnetic field nanoTesla (nT); 5. Yin / Yang percentages (%);
- 6. Bovis biometer in length compared to the wave angstroms:
- 7. Ionisation environment the emission of free radicals in positive ions from 0 to 100 and negative ions from 0 to 100;
- 8. Péndulo in square Hebrew: "water welling up."

Table III identified the points to be analyzed and compared; in Table IV We analyzed data obtained with various graphs above.

In Figure 1 we measure the potential difference in each of the points and put them in a table: fracture I: 1 and 2 -135 and 125 mV / m; Fracture II: points 3 and 4 to 210 and 240 mV / m; places outside of fractures: points. 5, 6, 7 and 8-5 mV / m, 0 mV / m. 0 mV / m and 8 mV / m. respectively. We verify that the fracture II presents more anomalies, which can indicate the presence of ground water because water is a dipole and generates difference spontaneous potential.

Noting Table IV, we found that the fracture II presents the highest rates of electrical anomalies, magnetic, very Yin, the biometer Bovis charged 500 Å, however the pendulum "will spring water" turned on Fracture II and terrain points 5 and 8. It is verified that these

Subsurface points have water, soil, unimportant in the investigation of drinking water. Fracture II but said all necessary anomalies to be a greater degree of certainty in the presence of drinking / mineral groundwater.

Tables V and VI indicate the interpretations given to the eight observed points and Tectonic possible model for the study area.

Table V: After the above analysis, it is concluded that the fracture I is cizalhamento sinistrai or displacement. It identifies the fracture extension, warehousing water is Fracture II. Sections 5 and 8 are locally with groundwater and subsurface 6 and 7 are dry spots without groundwater, good for the location of the residence. Table VI: The possible tectonic model that affected the study area. This analysis is only possible with knowledge of the regional geological model (vide Table II). you can at that time, use graphical possible flow (m3 / h) and depth (in meters) in Fracture II.

Figure 53 shows a block-schematic diagram of the surface (1). Then the

Subsurface soil. In erosional unconformity, then the presence of rock sediment sub-horizontal (2) and, finally, in great depth, the solid crystalline rocks oriented to (3), angular and erosional unconformity, affected by tectonic events reached Brazilian platform Basin São Paulo, for example. It is observed that crystalline rocks elevations suffered outcrops and subsequently to events generated fractures which may contain water. This phenomenon that generated the basins and high occurred from 150 to 30 million years ago and old fractures there are over millions of years, remember? TO Then the sediments generated sedimentary rocks (tertiary) were deposited forming Basin São Paulo and the ground surface (recent) covering the rocks sedimentary.

In short: the search for drinking / mineral groundwater requires a systematic scientific with well formulated stages. It requires a research plan to be formulated in each region, both in Brazil and in any country in the world. In each location the geological features are different. You should keep in mind that events occur in space and not in the plane. In that meaning you can not extrapolate an "experience" from one place to another. The events are not repeated automatically. an ongoing study of places and regions where it is needed working. If a job appears on the Bay, for example, you must study all characteristics of regional geology and specifically the place where water prospecting underground. There are no ready models. This paper aims to show schematically a study in a particular region, in the case Basin São Paulo and adjacencies. But for that study and synthesis it was taken many years of research. Do not be discouraged. Studied!!!

Cenozoic-Holoceno-Recent - 1) floor rock alteration "IN SITU" or transported.

Cenozoic-Tertiary / quaternario - 2) Sedimentary rock lacustrine sediments and river.

Pre-Cambrian - 3) crystalline igneous rock or metamorphic.

Cambro-Ordovicianas - 4) Breaking extension water warehousing

5) Breaking cizalhamento or displacement.

6) Breaking push.

Mesozoic-Cenozoic -

7) generating normal and push basin and tectonic faults high, respectively.

Figure 53

94

Dowsing wave form

The history and evolution of dowsing is divided into several phases. The first goes back to a undefined time, due to lack of records: is the period of dowsing, empirical practice, ending with the emergence of French parents, at the beginning of the 20th century The second phase It begins with Bouly and Mermet Abbots with formulating dowsing theories, with attempt a scientific approach to the phenomenon. A third phase will begin in 1939 with the publication of research Chaumery-Belizal in the book *Treaty Experimental Physics Dowsing* . And the emergence of the then Dowsing waveforms. Finally, a fourth and final phase, in 1975, to the Dowsing Kabbalistic result of the work of Jean de La Foye and Ark'all Foundation. In this chapter we will discuss the fourth phase: Waves Shape.

The first discovery regarding emissions caused by the shape of objects because Enel, Russian pseudonym Colonel Skariatine (1883-1963). In 1908, when his first trip to Egypt, Enel discovered a strong radiation inside the big pyramid. As well he discovered that there was correspondence between emission colors and various elements nature and human organs. These emissions were calls of "colors" only in order to classify the solar spectrum and to develop a system as a starting point. He noted that these vibrations were due to the shape of that substance or color. In 1928 Enel made the first hypothesis concerning the vibrations of the waveforms by dividing set as follows:

POSITIVE OR COLOR ACIDS

Yellow
Orange
Red
Infrared
Black
blue
Indigo
Violet
Ultraviolet
White

COLOR NEGATIVE O BASICOS

On this scale, the green was not included, since Enel detected it as positive and negative. the V- it was then called ash by some researchers to be in the center radiation between black and white, but a color pendulum used as detector regulated Green revolves counter-clockwise on the negative green V-.

At the beginning of the 30s, André de Léon Chaumery and Belizal, after a trip to Egypt, such as Enel had started to investigate emission energy due to the ways of the solid considered the most perfect; the sphere. With the aid of a pendulum detector radioactivity and had Turenne, detected three intersecting circles in right angles. The three planes in geometry allow splitting a sphere into equal parts.

Deepening the research, now using a neutral pendulum, found that in points

North and South, two poles, evidenced by turns times and anti-times the detector (rotation North positive, negative twist to South). The two circles intersecting in N. S. and were considered as meridians, and the third horizontal, as Ecuador.

When analyzed, the two meridians presented: one, the vibrations in electrical phase and other opposite magnetic phase.

A detailed study of Electric meridian using a neutral pendulum testimonies solar spectrum and bastonete of copper, as prompter,

Chaumery-Belizal detected seven-colored vibrations spread to 1/6 interval. On the pole North sphere green emission and descending by the electric meridian in Ecuador direction to the west side, other emissions in yellow, orange, and red. To the east, blue, indigo and violet side. They called these seven vibration spectrum colors visible. They found even in the lower hemisphere of the sphere emissions: infrared, black, "Negative green", white and ultraviolet.

These last five issues were christened color spectrum invisible.

The magnetic meridian, object the same detailed investigation, at its upper part 7 vibration-color: green, blue, indigo, violet, ultraviolet, white and green negative. A finding that the group colors in the two meridians is not the same as the magnetic account with three colors of the invisible spectrum: ultraviolet, green and white negative, the electric meridian are only present vibration-color visible spectrum. At the South Pole, the

mysterious vibration that makes anti-clockwise turn a neutral pendulum was called, by convention, Green V- negative for being in opposition to the green and found positive in the North Pole, which, meanwhile, it became known as Green Positive. And they ended by finding the same 12 colors corresponding to Ecuador circle, only in undifferentiated stage, that is, Electromagnetic. Today call (equador Chaumery-Belizal).

Green Negative, noted, does negatively rotating neutral pendulum exposed to your action. They considered this as the shortest and penetrating vibration of the universe, capable of through lead blocks judged effective against X-rays

This vibration was discovered in 1934 and patented in France on April 10, 1936, and as the method of " *Decomposition Spectrum Sphere* ". The Green Negative is constituted in reality a vibration spectrum.

Green Negative spectrum in the range between Black and White, was divided into twelve Chaumery-Belizal emissions. These researchers divided the sphere Ecuador in degrees (Division of circle 400).

Grade	First name	Grade	First name
5th	Alpha	395°	Omega
10th	Beta	390th	ro
15th	theta	385°	Psi
20°	X	380°	lambda
25th	Wildebeest	375th	Khi
30°	Dzeta	370th	epsilon
33.5°	Black	366.5°	White

It should here a further clarification on the color of the V-, as the baptismal name He has raised over the years errors interpretation. Chaumery-Belizal perceived the coherence of its system, since the spectrum She was detected in the same sequence

the light spectrum.

This finding gives undoubtedly fastness theory. Today we know that among the waveforms and the light spectrum there is a correct affinity, or a manifestation is a harmonica other however are of different nature. As I said earlier, Green Negative name is just a name. If he V- it could be translated through a color, probably this would be the ash.

During the study of the area they found

97

that the spectrum of the meridians moved in an elliptical shape as the movement of the sun on the horizon. For set these two radiating circles were inserted two small metallic masses two opposite points at the intersection of magnetic meridian in Ecuador.

Based on the study of the sphere, Chaumery and Belizal created the Péndulo Universal, the first dowsing instrument 12 can detect vibration-color spectrum waveforms. constituted from a wooden sphere with 6 cm diameter, the two meridians and Ecuador finely grooved with respective vibration-colored inscribed thereon. Like in the sphere, two metal bodies inserted on the fixation spectrum artificial crossing of

magnetic meridian in Ecuador say the stability of radioactive plans. A non-magnetic metal inserted upside in poles allows the suspension wire can explore all points of the sphere. A dowsing small stack of 4 elements in the inside the sphere increases the power of this emitter pendulum and stabilizes its polarity. The thread Suspension has four brands to electric and magnetic waves in the vertical and 45 ° and a small reel, which screw enables a coil with up to 1/4 mm precision.

The designation of electric waves and magnetic stemmed from the fact that waves into electrical phase not cross

electrical insulators such as Bakelite, ebonite, porcelain, etc. but they do when the panel is iron. And the wave magnetic phase It is stopped by the same panel of iron and not It is an electrical insulator.

Jean de La Foye repeated in his research experiences Chaumery-Belizal, and its end result dissents concepts

98

presented earlier by the two researchers. Placing opposite a pair emitter sheet metal, of zinc and a copper, La Foye found: zinc and copper north south, does not change the emission phase. Copper zinc north and south makes the magnetic emission Electrical and vice versa does not alter the color. According to La Foye, magnetic emissions and electrical seem to be of the same nature, but differentiated by its meaning in relation to a certain point.

Summarizing: the waveforms may have positive or negative polarity, phase electric, magnetic or electromagnetic yet. And the spectrum of these waves has 12 colors different seven five invisible visible.

Investigating with PU Fringe V-, Enel found an issue between this and the Black, exactly 6 degrees and 15 minutes eiste West axis. Enel is called the ray emission Pi, as it found that she is producing cancer, she thought she could also (at the beginning Homeopathic similarity), cure this disease. In reality, only the beam Pi It issued carcinogenic electrical phase and magnetic phase, as found by ENEL, can cure cancer. With the use of cylindrical emitters with helical lines, getting issue Enel isolation each waveform cured countless cancer cases with ray Pi and V-, both magnetic phase.

After studying the area, Chaumery and Belizal went on to study emissions semi-sphere. As in the field there are also three emitters planes (one and two Ecuador

In the vertical, the semi-sphere for emitting V top and V- bass and in the horizontal, she V emits north and south V-. And in the face flat the Black and White are farther the V- than on the convex face, the V-is pure at that face. For that reason used the flat face for low or South when It makes use of the semi-sphere as emitter (Normally the battery is used in the horizontal as a matter of practicality). when two or more semi-spheres are joined (convex face flat face), the power is increased emission V- (V + and opposite - up or North). In this set semi-spheres and Belizal called Chaumery "Dowsing stack". When the battery is in the vertical, is called cosmic stack and when the

horizontal, taking the name magnetic. In both cases it emits Undifferentiated spectrum, ie, the electric and magnetic phases simultaneously.

As the Universal Pendulum, Dowsing battery was patented in France in 1936. However it was already known in Egypt more than 6,000 years, as you can be seen in the Museum the Louvre in Paris. It is exposed beyond a phone that has two batteries dowsing and two crosses and ansatas emitted in the center of its lid wave Blue.

The emission power of the battery dowsing increases with the number of semi-spheres and intensity with diameter. Establishing a parallel with electric batteries in a "voltage" higher depending on the amount of semi-spheres and greater "amperage" with the increase in diameter. And it is possible, as well as electric batteries, put them together in series or in true to form parallel batteries. With a stack of 9 elements, it is possible to mummify

any type of organic material, by the action of V- ray: it has the ability to destroy microorganisms.

For human therapy
It is advisable to use batteries
four elements, as
Chaumery-Belizal
they found what 4
elements represent the
Normal cell voltage
human or animal in
state of perfect health.

C.30 pump, creating this
powerful transmitter waves
how should the Léon Chaumery.
This project was taken up by
Belizal the 60s and perfected.
The C.30 Bomba received this name
because of its diameter 30
centimeters. She is composed of
three concentric hollow spheres.
Between each field there is a
small gap, the
Wood each sphere is aligned
in relation to the other function
polarity. This game
spheres is separable in the medium
the height of Ecuador (Ecuador is
divided in degrees), allowing
access into the assembly. In
the North Pole is a stack

dowsing composed of four elements, cosmic scavenging flow and in height
Ecuador, another stack of 15 cm in diameter, is in the horizontal, which sends to the center
the magnetic flux pump. To increase the uptake of waves, each cell has an antenna
threads covered with seven elements. In the internal cavity of the pump they are fixed two pieces of
metal, one positive and one negative. And in that place on a small stand, it places a
testimony of the patient and a picture of the organ to be treated when you want to make emissions the
distance healing purposes. The largest outer sphere, is composed by two meridians,
an electric, other magnetic, electromagnetic and Ecuador. The choice of vibration is made
through an external switch.

Escuadra, this form is the result of joining two perpendicular lines, forming a 90° angle. She is a Natural green V- generating negative. The Vibration-emission color is projected by horizontal line of 90° .

When changing the angle of the vertical line between 0° and 180° shall find all series vibration-color spectrum, visible and invisible.

The Issuer the shockwaves is one more appliances created by Belizal. East powerful device is based on the refractive properties of the bracket. This composed of two dowsing piles, one in the vertical, and one in the horizontal. a selector

placed under the cosmic stack will emit the selected vibration. This switch is constructed from a mobile disk rotating from the central axis in the top 13 or 21 slots, the reliefs being painted in black. Mounted on one support which are registered all vibrations of visible and invisible spectrum, having one of the side one rule projecting to be painted of black. The angle generated by disk slots movable relative to the projecting rule Through this the vibration-color. A 90° generates Green V- negative, the acute angles:
 White, he
 ultraviolet, he
 violet, indigo the
 Blue and green
 Positive V +. The obtuse angles:

black, infrared, red, orange, yellow, green and positive V +. Belizal used 4 to 15 batteries in the vertical, and from 4 to 30 cells in the horizontal. This device emits only the spectrum Undifferentiated.

Both the pump C30 how the Issuer Shock Wave, for their strong emission, are able to impress sensitive films gamma rays, placed in their emission points.

Chaumery-Belizal used large size devices whose emissions powerful even affecting the operation of an electric clock, delaying it. Dowsing batteries and emitters even radiodermias large size produced thus were taken to displace additional tools for a small room in the back of the garden, protected by a mesh metal. They found that within the C pump 30 there was always a difference temperature relative to the outside, of 15%. According recounts Jean de La Foye, André Belizal in one of their experiences, get an apple tree loses its leaves in three weeks with simply placing device waveforms 30 centimeters length lit with a chain.

The second book of André de Belizal, published in 1965 in collaboration with PA Vivi starts with a message text, which I find interesting play: *"This work is the fruit of 30 years studies, silent and patient research, some disappointing, some exalting. Y also the natural prolongation of the volume published in 1939, and then republished in 1956 with a different title: Dowsing Vibrational test, and that in collaboration with Léon Chaumery retired, alas, prematurely in our affection on February 7, 1957. Our collaborator and friend was indeed the victim of their experiences and completely dehydrated by our green ray negative V-. At this time we had not yet found an antidote vibration, PA discovery later with Vivi was kind enough to note about our work ensure their precious contribution ...*

... The negative green V- represents the point 0 - 400 (degrees), is a mysterious vibration, real line between life and death. She dominates matter, burns, destroys ... but You can also keep life outside of space and time ...

... It's on the basis of our "decomposition of the spectrum in the field." It is indeed the stone angular our method, without which it would have been impossible to construct a valid theory and today accepted by all serious researchers. A. Belizal "

As can be seen in the text above, Chaumery-Belizal work within the trend physical dowsing which, according to them, if based on the principles of modern physics, not however discarding mental dowsing then, according to these authors, she is involved in when the vibration detected through the human body. Mental attitude This allows operator becomes aware of the phenomenon and to amplify, forward movement to a detector (pendulum or rod).

above the ground surface. The surrounding cosmos, meanwhile, bathes with its influence all Over time, these two forces, when they are in perfect balance, produce an environment Natural healthy but when an imbalance occurs or "*breakdown of compensated forces* ", the telluric diseases resulting wave generated in living organisms. The Chinese called this imbalance " *veins of the dragon* " and aware of their hexes, never built their Rooms on these places.

Telluric wave uncompensated is a negative carrier wave green V-, contaminating surface energy of radioactive dry failures, sewers, streams underground, etc.

We live in a world of energies, influences, shapes, everything, absolutely everything vibrates on our return, all objects, all things interact with each other generating a vibration multiplicity. Everything around us can influence the outcome our experiences, for example, open a window or door in the alignment of a biometer can distort measurements. To always get the best results, you should always work in the same orientation on the work table. On this table there should be Radiant any object, drawers should be closed, the cavities drawers open issues!. The light should always be on the same side and always have the same intensity. The modern world and urban centers recently gave us an increase reasonable new vibrations. Watch your back, cable TV, cell phone, fan connected radio playing softly to create a pleasant climate, clock battery, Electronic calculator, fluorescent lamp, computer. If you live in an apartment, you have Additional water pipes inside the wall, electrical installation in the four walls, ceiling and even on the floor (the roof of the neighbor).

Some dowsing devices

Arrow Dimmable:

Created by Enel, this device
It is based on the drawing pendulum
Chaumery virtual cone-Belizal.
It can be executed from a
wooden square with 10 cm
side, crossed the center by a
also wooden rod with
diameter of 1 to 2 cm, whose tip will
sharp cone. projecting the
stick more or less to outside
a virtual cone plate is obtained
relation to the table square. To the
rod length will be indicated vibration-corresponding color, which can be

found using any color pendulum. It is set at a correct distance from the arrowhead drawing organ to be treated, along with a statement of the patient, and adjusts the arrow in the right color for treatment. Wishing each increase energy influx, is
You can paste a string in the back of the arrow and the nearest wall, so that the radiation from the earth load the device. A white sheet metal, eg

aluminum, can be placed between the device and the table to prevent current leakage. He result of the application of this device is very good in benign diseases. Its action is

Soft long enough to be safe applications.

Helical cylinders:

Created by Enel, these devices
They have the advantage of being able to send a wave
absolutely free unique color of other
parasitic emissions. Small cylinders
wood with a diameter of 3 cm and length
10 cm have a dimension measured
suitable for the purpose in view. on each
gluing cylinder be lined paper with
nankin ink according to the following model:
features in the sense of the length of
Green cylinder produce positive traits
the opposite direction, ie, in a circle
around the cylinder, generate Green
negative. Other colors will be
obtained from helical lines,
differing from each other at an inclination of 15
°. Dextrorotatory spiral emit
you color negative (blue), the coils generate positive levógiras you color (red). Each
cylinder has one of the stops in a hole of 2 cm deep, which will be set for
support, which must be aluminum, this set supported on a base
copper. The use of the two metals is essential to isolate the table assembly on
which is mounted. A string stuck between aluminum and the wall ensures an energy charge
Additional native land. The testimony of the patient should be approximately
75 cm cylinder. As the emission of this set is quite strong, it is advisable greater
time control and especially do not do long exposures, which break through the charging period
total that is 48 hours.

Escargort - Selector

The Escargot-selector can be considered as an extension of Ecuador's Pendulum
Universal. Staggered at 400 degrees, it allows a virtual pendulum cone detection
any wave-imbalance from a control, and also its detection-correction wave.
This device was made by Belizal and Morei. He is composed of: a base wood,
embedded in which is a form of Indian shell (escargot) Zinc compass,

second clamshell, copper,
this mobile call selector, a needle
research, prey on an axis,
on which is placed a disc ora
ora a chrome metal sphere,
according to the subject of the investigation.
This serves to explore the needle
circumference divided into 400 degrees
and thus realize vibration

detected by the pendulum. They are still needed a neutral pendulum and virtual cone pendulum.

Based on the study of the shell Hindu, this device is a sophisticated analysis rule which also allows the issuance distance. Throughout the description for use as a rule, along with the respective tables can be found in our book on dowsing charts. The escargot-selector can be used as the distance emission apparatus, when a low-power device required. HE places the testimony of the patient along with the drawing of the organ to be treated in the extension of line in the chosen color. In the center of the apparatus is placed an emitter active type radiant sand, or another. Like some other appliances, the Escargot has the disadvantage of the whole issue vibration spectrum-color to turn thereof, may interfere with other instruments at the scene.

Ba - Gua

Chinese origin, this instrument, whose creation is attributed to the legendary emperor Fuh-Hi, It was white studio several dowsers. Most question concerns the distribution trigrams exact, since even the Ba-guas of Chinese origin come to us with multiple variants. The version presented here is of Chaumery-Belizal, emitting phase indeterminate, that is, the spectrum Electromagnetic when aligned north-south, wins power. Placed on a witness at its center it is possible to detect the vibration-disease and vibration-remedy. In the red and green colors is a graph good power transmitter. someone whose witness has been placed on Ying Yang, in the center of Ba-gua, perceives a reasonable promptness the beneficial effects of the issuance of this instrument. When trigramas

Khien (south) and Khouen (north) are not aligned, it is useless place. There is a difference between the use of this instrument for Feng Shui and dowsing. Dowsing imposes the strict observance of the related physical factors. Subjective or mystical aspects They must be in principle discarded. In dowsing, the Ying Yang rotating anti-clockwise assures non Reverse polarity of the issue.

The designations of " *Wave Form* " in any of its variants constitute an error, because it is not really wave, not having wavelike character. The only way makes this energy emerge, concentrate and issue. Energy catalyzed by the way is present in all the points of the universe. The combination of factors, Form and influences acting on site, They emerge only make energy surrounding diffuse field, transformed into a beam-a I addressed. Researchers at the Ark'all (France) Foundation, led by the dowser, physical and mathematician Jacques Ravatin, they called the " *due to the way energy* of" **EIFs** . this acronym

It means: Emergences, Influences, formes (Emergency Influences, Forms and plural s).

The intrinsic nature of EIFs is still unknown and, therefore, the various definitions existing incomplete and inadequate.

To better understand the EIFs see some of their characteristics and properties:

1 - They have two phases, a "magnetic" and other "electric".

2 - possess polarities (positive or negative).

3 - There are three levels: physical, vital and spiritual.

4 - they exist in nature but can be created artificially.

5 - are conveyed via a thread or insulating (metal cables, line, etc.), metal cylinders, plastic or wood, light beam, radio wave and current electrical or magnetic.

6 - suffer reflection, diffraction at the interface of various materials: mirror, prism or lens wood, etc.

7 - Their phases are reversed to move the hub of a negative spiral (with rotation for left).

8 - They are highly penetrating, through walls, rocks, metal frames (iron, lead, etc), however they are stopped by metal grids or textile and yet dimensional meshes, as a simple graph paper. The effectiveness of a barrier to the mesh is EIFs inversely proportional to the size of their grids.

9 - are amplified or reduced by transformers.

107

10 - fill the closed and semi-closed volumes such as boxes, cups, trunks, apartments, sanitary pits, galleries and disabled pipes, etc.

11 - Thought can create, modify or cancel EIFS. This result depends heavily on Operator psychic energy.

12 - Natural EIFs are emitted vertically

13 - Cracks, fissures and cracks (single or multiple) completely change its quality.

14 - The Green negative magnetic only exists in nature in animal blood hot, they synthesized when in good health. On the other hand, the Green Electrical Negative exists throughout nature and its excess in some living things, is a sign of disease.

15 - The Green Negative Tram can serve other EIFs carrier wave.

16 - Influence much (catalytic action) current dynamic systems, such as metabolic reactions, fertilization, cell division and multiplication (mitosis), polymerization, fermentation, photographic processing, saponification, aging wines and spirits,

germination etc.

The influence of the Moon:

We saw during the study of the sphere sunlight exerted an influence on the spectrum waveforms. Moon also exerts its influence in this process, especially during night time and also according to the lunar phase. A start in the new moon and progressively until two days after the full moon, the influence is favorable, having its maximum during the full moon. From the third day after the full moon the effect is reversed and becomes unfavorable.

Energy Pyramid:

Quadrangular pyramid base is a hub energies solid form. The Pyramid of Cheops, plus energy form and other subtle energies, also captures energy cosmic and produces electrical energy from quartz crystals (piezoelectricity).

The four slabs above the King's Chamber have the function to increase the uptake cosmic ray and projecting into a unidirectional beam in the direction of the sarcophagus and chamber base. In this beam is the mysterious ray Pi with which the French dowser Enel cured countless cancers.

The pyramid created inside a weak magnetic field that works best when its base It is aligned in the north-south axis. The effects of the pyramid vary from day to day due to geomagnetic field variations and subtle energies on his return.

Czech Karel Drbal engineer discovered a mathematical formula to determine the length resonant wave of the pyramid. I behold this formula:

108

Where: L = Wavelength, A = Apotema, h = Height

Obtained wavelength, one can calculate the resonance frequency of the pyramid the following formula:

The frequency (f) is obtained in hertz and the wavelength (L) it must be expressed in centimeters. If L is in meters, the formula should be as follows:

The frequency of the pyramid does not depend on its size, but the apex angle. Because, knowing the frequency of an organ, just find its wave length and build a pyramid whose difference between its apothem and its height is half this wave length. In this way We have the vertex angle for a pyramid, of any size, resonating with the body considered.

According to Patrick Flanagan, piramidólogo and American physicist, generates nanoondas of the pyramid radiation are concentrated at its center. In the area of the King's Chamber, radiation, whose strip

wavelength is about 10 nanometers, it is transmitted by resonance molecules or there are atoms.

The energies subtle
contained in the King's Chamber
They are capable of producing states
altered states of consciousness and,
So in this place they were made
initiations from character
esoteric.

Lining up a pyramid
North-South axis and making
match the spectrum
Chaumery-Belizal, we will have the
points wave emission
shape. At those points
aligned pyramid we find
those with special pendulums
emissions, allowing their
uptake, extension and use for
therapeutic purposes. As in the case of dowsing batteries, the pyramid allows

109

emissions distance, through the use of a control and correction using precautions
necessary to not cause any saturation in the recipient.

Khufu Pyramid was also studio white Chaumery-Belizal. They noted
Positive that emits green apex, and the base twelve vibrations are present
Ecuador sphere.

One-third of the base of the pyramid, either on the vertical axis, there is a powerful V- having
a strong dehydrating action. Some years before the work and publications of Enel,
Chaumery and Belizal, physical and Antoine Bovis dowser had found dead animals
inside the Great Pyramid, which showed no sign of putrefaction. Back to
Paris built replicas of the pyramid and then align them on the NS axis, found that he could
produce food dehydration and small animals, preventing decomposition. It was
exactly in the decade of 20, after the disclosure of the observations of Bovis, which
It began the worldwide interest in the hitherto strange phenomena produced by the form
pyramidal. The aforementioned Czech engineer Karel Drbal managed to patent a device for sharpening
Gillette razor blades guy, that old model with two blades. You want the recipe? Get
a small pyramid of 12 to 15 centimeters base, may be tubular or cardboard, align
with the aid of a compass one side to the north, at the base of the pyramid in the center
place a piece of cork, on it insert used in the vertical axis, a foil Gillette
geared to the north, another to the south, a third of the height of the form, ie, at the height of the
King's Chamber. The first stop for ten days, from there you can move using the picture
regularly whenever sufficing reposition it in the cork holder. Good beards!

King's Chamber does not receive the powerful V- of the pyramid because it is not in its vertical axis;
receives, however, the mysterious ray Pi discovered by Enel and V- (smaller power)

produced by the stack of four granite slabs above the existing sarcophagus placed there.

Classified by the ancients as one of the seven wonders of the world, the Great Pyramid cause admiration to all who see or hear about it more than 4,000 years ago, is the impressiveness of its size, is the mystery of the reason behind its construction. located in the west of the Nile River Bank near the city of Cairo 10 stone pyramids stand, three of them of imposing size. A greatest of all was built in 2650 BC to leadership of King Khufu, known as Cheops, the result of erroneous transliteration of his name made by the Greeks.

The first pyramid dated to 2780 BC was built during the reign of Zoser, projected by its vizier Imhotep, a mixture of priest, surgeon, architect and philosopher, had today as an almost mythical figure. The pyramid of Djoser owes its name to being basically a mastaba with five other smaller stacked on top. Total can be more than 70 pyramids found throughout the region for which the Egyptian civilization spread. Many of them are reduced to a waste piled stones. The method in some cases construction was responsible for the collapse of the building as Some pyramids were pricked from one earth walls coated externally

110

stone or brick, while others were destroyed through the centuries being materials used in the construction of newer buildings. A vivid example of this is the great mosques of Cairo, built with the stones of the outer lining of the large pyramid of Giza.

It is estimated that about 100,000 stones were removed from the Great Pyramid, remaining in place near 2,200,000 blocks of limestone, mostly weigh something around 2.5 tonnes and some large blocks reaching nearly 12 tons. Today it is hard to understand as a group of workers, armed with only bronze tools, not using Animal or wheel drive, could carve perfectly the impressive amount of stones, only move them using wooden sleds and lift them higher and higher, higher, up to 130 meters. It is inexplicable, the most bizarre hypotheses were raised. Erik Von Daniken believes in the work of aliens. And as fun least think of someone coming from a planet distant to be building massive stone pyramids in the then primitive planet Earth.

From author to author there are variations regarding the dimensions of the Great Pyramid. The following numbers are approximate result of slight variations depending on the calculation poor state of the pyramid. The base is a square with 230.27 m square having a variation of about 0.20 m from the largest side to the smallest. The actual height is 137.46 m.

The number-key presided
construction of the Great Pyramid
Phi is the number or Gold or Section
Golden, which can be obtained
mathematically =
1.618033, or the constant
Splitting a Fibonacci series. The
Nature shows us the most
the existence of various forms that

number. He is present in the proportion of plant leaves, of certain animals, etc.

The graphics:

For other types of research than the hidromineral field, the pendulum will like dowsing graphics processing aids mandatory.

The first graphics dowsing came a little earlier the Second World War. They were in the Most semicircles divided into a correct number of houses. served especially to tune the colors, numbers, and certain applications medicine or astrology, being that much of those graphics fell in disuse. Most graphics in use derived work Chaumery-Belizal and Morei, and even Servranx Belgian brothers who for two decades published a opusculé of fifteen leaves, EXDOCIN (Experiences - Documentation and instructions on the new science interesting Dowsers, monthly magazine except January, February, July and August). Some of these works were Reprinted by his heirs, who Today explore the mandatory source

Reference (available in Belgium and France). The seventies, Jean de La Foye, introducing the dowsing cabalistic, he injected a new source of subsidies enabling new approaches to theme.

A graph for analysis functions as a separator vibrational patterns emanating

the witness and informed the pendulum by Operator mind. Although it is operated by simple Mental dowsing, ie, without the use of the witness, the graph will always work as an excellent facilitator of dowsing work.

In practice we use circles or semicircles divided into 100 or 360 units, as a rule for a rough assessment, although this represents a abstract concept.

112

All bodies and phenomena of nature emit vibrations to them characteristics. In these vibrations are modulated characteristics of the elements that up, their properties, families to which they belong, from the time of their training, strength, measurements and dimensions, energy and energies that are related. The bosses energy of bodies and phenomena will be better tuned if the chart is specific.

The dowsing graphics are, above all, a simplifying purpose. Instead of using natural or artificial witnesses, we use a chart that will allow us to investigate all elements that interest us. Advantageously a graphic can include phenomena whose witness natural or artificial, it would be difficult to obtain. Besides that you can leave on a graph to analysis for placement empty sectors not yet known elements, or sector with the word "Others"; with that we know if any other element (energy, color, substance, etc.) is sought response or part of it. When you have a large number of elements, can the divide up into two or more graphics. In this case, it should be included in each, In addition the sector "Other", a sector with the word "None." When the pendulum indicate the Sector "Other" is changed to the following chart of the same series; If the answer is "No", the investigation is concluded in relation to this series.

To create a chart vibration separator, a certain number of factors should be considered:

- ✓ The dimensions of the figure, the choice of the most appropriate way, the amount of divisions, the eventual orientation of the graphic finish, numerical or alphabetical pattern to adopt possibilities amplification, etc.
- ✓ The graph should be symmetric in shape, printed in black ink on white background, have a sufficient size to display properly what is printed (letters, numbers, words or symbols) and the division targeted by the pendulum.
- ✓ A graphic wood (xerografiada) is more powerful than is done on paper, also depending on the mass.
- ✓ A small graphic has reduced its capacity for action by the dimension.
- ✓ The smallest dimension for a dowsing chart is that it can be registered within a square of 15 x 15 cm. Its ideal size is: if you enroll in the area a square of 30 x 30 cm.

✓ For reference, we can mention the labyrinth of Chartres used in France for research and emission it has a dimension ranging from 80 cm to 1 meter diameter.

✓ Graphics dimensions smaller than those cited above no purpose objective in dowsing.

✓ Pie charts divided into degrees should be oriented north-south axis, the zero point north. semicircular graphics will be oriented in the same way, the straight portion being aligned east-west. Rules such as Bovis biometer, They must be positioned on the north-south axis. Zero rule north. If the model rule biometer purchased the black square should be aligned to the south, leaving the dowser front to the west.

✓ You can subtract a graph of the Earth's magnetic orientation imposing Artificially field discovered by Jean de La Foye. To be print the Northern form a graphic simply place, the length of its longitudinal axis, a circle black on one side and a white circle on the other. The black circle determines North Shape and white, Southern way.

In its multiple uses graphics allow:

- a) Select a body or phenomenon among a number of others: colors, vitamins, hormones, simple bodies, etc.
- b) Evaluate the order, classification, grade, strength of a thing or phenomenon percentage, pH, voltage, temperature, pressure (and other arterial) blood or soil resistivity, etc.
- c) Relate an item to a more general phenomenon: subtle bodies, fundamental rays, chakras, astrological influences, seven rays of Nature (esoteric concept), etc.

Certain graphics can also be emitters subtle influences such as EIFs, intentions, fundamental rays of remedies, colors, stones, magnets, solenoids, light and energy different.

If this is the first time you are reading a book on dowsing, at this time should be asking, but as a simple drawing can emit some distance?

Associated with the different cultures is the practice of carrying with itself create drawings can bring beneficial influences to the carrier, in the form of pendants, rings, medals, such Solomon's seal, the cross Ying Yang, Mandalas, etc. Likewise, it is also common take one's residence for the same type of objects in the form of boards, panels. We can see that the strong belief that such is present in the collective unconscious practices can be beneficial. Or that a man unconsciously recognizes them as positive. We also know that the dowsing theory-ray or beam-union witness tells us that two bodies of the same nature or a body and its iconic or textual representation remain each other one, liable to be detected, analyzed and transmitted energy union distance by means a carrier wave.

Perhaps imperceptible to ordinary people, but nature has a way of

carbon, hydrogen, nitrogen and magnesium, responsible for plant photosynthesis, in the form pentagonal some flowers and logarithmic arrangement of seeds in the corolla. marveling, perceive the great symphony of harmony of life itself in crystal structures, relationships between the unit and the golden section present in the proportions of animals and plants.

Dowsing graphics, more or less complex geometric arrangements, make a mimicry nature and entering in line with potential energy state currents and metamorphosing in-the dynamic energies.

Geometric philosophy in the circle represents the non-manifested unity and square, unity serena about to manifest, or even the spiritual plan and the physical plan. Perhaps all other geometric arrangements managed to conceive may represent the multiplicity of energy dormant around us.

Each set of shapes, letters and measurements and proportions generate combined dowsing instruments (graphics) whose intrinsic characteristics make them for you aplicabais distinguished purposes, which is why we propose first grouping graphics by families.

We can classify the dowsing charts in the following categories:

1. Graphics for analysis:

- to. I biometer from Bovis.
- b. Escargot selector from Belizal.
- c. Psychometric.
- d. Equatorial disk Jean de La Foye.
- and. Rule for analysis geobiología.

I have seen these years I work with dowsing some gifted dowsers a correct skill they confused and issue you seem wrong for the fact just doing one dowsing supposedly "mental" simplistic, based on "positive" and "negative". and all dowsing any assessment must be qualified and quantified. Better a numeric value, even Abstract, none of that value, reason enough to always use a biometer. For example, knowing that 6,500 Å is ideal for maintaining energy balance value, about a diagnosis of "your room is negative," instead of "your room has an energy of 6.200 Å". What it would be much more "positive" than 4.800 Å !!

2. Graphics for revitalization, recovery or dowsing materialization:

a) High Vitality of Busby + Alpha Omega.

b) decagon.

c) Hiranya

He is enjoying dowsing? Let's do an exercise? Take a piece of paper-aluminio of those used for cooking, and form a small ball with him. In a small piece of white paper write the word ALUMINUM, Place the two side by side, putting the pendulum on the floor while hand Free points aluminum ball, ask the pendulum if the two materials have the same energy pattern? The answer is no! Place

now writing on paper with the word within one circle as the image, wait an hour or more, remove the paper and then the pendulum as previously. Well it is! The answer changed, now is yes, the ball and the aluminum piece paper with the phrase "aluminio" written contain the same energy. You just made a dowsing materialization or textual recovery.

The Servranx perceived recién- words his writings did not emit energy meaning, for that to happen it was necessary wait a few days, as if slowly word out incorporating the energy of his meaning. That precluded the use

immediate written testimonies. After making the experience you just made, They could see that the word gained an energy quantum much faster. They investigated for a long period which graphically that would reduce the time

ten regular polygon sides.

A decagon with a larger radius of 6 cm and a thickness of 3 mm stroke, it can get dowsing materialization of homeopathic remedies for cases of emergency department following times:

M or XM 5 minutes homeopathy - 10 minutes 200 o7CH - 15/20 30 minutes or 5 CH -30/45 6-3 or 4-3 CH minutes - 60 minutes 1-2 X 90 to 120 minutes, effects similar to those of the tinctures-MOTHER 3 to 7 hours for impregnations intended for external applications, which in the case is less effective.

Names or phrases to potentiate must be written in small paper remove ink black. The bass part of the written line will be turned over to the center of the decagon. The glasses containing water or material inert, mandatorily unstopped, they will only be closed after dowsing act.

On paper valorization
It lasts about 72 hours period
after which the energy value
decays, stabilizing at a value
lower. When processed
on water, the duration will be
comparable to that of a remedy
Homeopathic, if lunge under
certain conditions.

For fast valuations, one
decagon double, with
about 30 cm
diameter and a thickness of 0.5 cm stroke, will be suitable.

Does not produce any results placed in the decagon to assess photos or biological samples, such as hair, saliva, etc. The decagon in dowsing has application in impregnating a support for writing, with the power of the word or phrase written on it in impregnating water or other liquid, or even different inert materials with energy placed phrase annexing. It's only!

All kinds of textual witness should be valued at the decagon to increase its impregnation by Ray Union and improve work efficiency. Should investigate the recovery time necessary for impregnation of 100%, and total elimination of extraneous power

(Remanences, environmental harmful waves, influences the material of the decagon and paper where textual witness, etc) is written.

3. Graphics and compensation for environmental rebalancing of certain energies:

a) Keiti of Easter Island.

Indecipherable script pascuenses gave us an object of inestimable value, the keiti tablets, first presented in 1936 by Chaumery-Belizal in his book Release, and today used in dowsing in the form of graphics for environmental energy compensation. Do not They require spatial orientation, further facilitating use, not saturated, and operate in a broad spectrum of imbalances. Pendulous enough to use and how many points, as the space to be treated.

At this point you should be saying, "but that Compensator Symbol André Phillippe is useful for all? "In truth he has a broad range of applications with good

effectiveness. Today's version is widely marketed, in reality, the result of the graph
Original stayed with my own combination (more details in the book Graphics Dowsing)
They must in any case be always observed certain general rules with respect
the colors, dimensions and application sites. It is with some sadness that we see today the
dowsing marketing of small-scale graphics in the form of adhesives,
the most imprudent or gullible charge for home driven by the desire to protect Cons
bad energies and harmful effects of appliances. They reached the end of
sell an adhesive SCAP (Symbol Compensator André Phillippe) with 2x2 cm printed
in black to stick on cell phones. That shows a total lack of
basic principles of graphics performance in dowsing, or in the worst case,
bad-faith. While that, the nearly 800 Mhz microwave cell continue to promote
molecular agitation of the liquid present in cells and brain cooking "operator".
See below photos term where the darker areas correspond to temperatures
high. 2,000 years ago and a voice was raised against sellers of the temple ...

4. Graphics Issuers

- a) Tri-circle of Jean de La Foye.
- b) Symbol Compensator André Phillippe
- c) Table d'Amiens.
- d) Swirl (Turbilhão).
- e) Equatorial Disc Jean de La Foye.
- f) Board Peggotty.
- g) Telerradiador.

h) Atlante Cruz.

The former group shines by
Unanimously, all excellent graphics,
deferring to each other only by
intrinsic characteristics, which
determine its choice as the

desired application. When the distance factor is important it is advisable to use
some amplification method because there is a power loss.

121

5. Graphics application or magic protection

- a) IAVE Jean de La Foye
- b) Symbol Compensator André Phillippe (model
cabalistic).
- c) Seal Salomão (antimagic).
- d) Nine Circles.
- e) Bouclier.
- f) Symbol Mystic
- g) Magic Square.

In 1988, I found a chart authored by Jean de La Foye in the book and Mystics Gaston Jean Bardet magic. At the same time often perceived in people attended, some sent to medical advice, carrying an "indefinite pathological picture" as a certain barrier, or energy impediment which prevented the realization of a dowsing depth diagnosis. Knowing that dowsing is a fantastic instrument, able not only to detect physical imbalances present but even pre factors disponente certain diseases, such difficulty encountered bother me. Was when I began to place the testimony of those customers for a period of 15 to 20 minutes on this graphic. Surprise, it worked, it was like opening a small door through which he could give spied on the far side. Remade seven circles graph inserting within a multiple the "divine proportion", I punctuates the *Waw comme il faut* and add a small straight. All the

122

world liked it so much that all copied. Some years later I modified circles, using I wake up most of the music. I prefer!

Graphics for magical purposes or for protection in dowsing have a limited scope, Do not expect miracles, for greatest misfortunes, stronger remedies.

In addition to individual graphics commonly found in commercially possible formulate specific sets for particular purposes, eg graphics notebook health diagnosis and prescription of treatment, notebook graphics for analysis geobiological, etc.

Create a new dowsing chart is much more complex than the graphic result trasparen end leaves. Many "graphics" for sale on the market are nothing more than a soup forms, inhábilmente combined, resulting in an additional psychic operator effort.

The decagon, and all other graphics used in dowsing, should be carefully designed with ink on white paper or printed on washable material like plastic. The only factor that counts is the perfect representation of the geometric figure, ally to the mass, if possible. In Brazil alone graphics made in phenolic copper are used, which they are erroneously attributed special qualities. The graphics in this material were first made in 1989 by a friend, our electronics technician, as an option more DURAVEL for our graphics paper, laboriously designed with nankeen ink. In 1991, we use white plastic with black printing, thereby returning to the original concept higher contrast, the two opposing neutral colors.

He liked the subject? He has more on the subject in the book graphics Dowsing, of António Rodrigues, only book in the world on the subject !. All graphics, their authors, their history, what they are and how to use there. All graphics in full size. Dowsing In the health? It has a full notebook with the method for diagnosis.

Dowsing in the Health Area:

medical dowsing; This was the name given to the practice of dowsing in the area Of the health. Today, aware of the complexity of legal issues involved, we prefer to use the title name, as he best expresses this specialty of dowsing.

As I said earlier, dowsing is liable to apply in all areas of human activity. In the area of health dowsing constitutes a complete discipline, allowing investigate all the subtle physical, and certain predisposing factors diathesis (diathesis (Greek διάθεσις = arrangement, arrangement) is organic predisposition developing a disease. This predisposition can be inherited (genetic) or unexpected, but we can only speak of diathesis when it is not sufficient cause (though necessary) to developing a disease.). also enables the choice of the appropriate therapy and, sometimes, It allows extending its field of action when then becomes a therapeutic technique.

One of the noblest and most common applications of dowsing is undoubtedly in the area of health.

The Bouly and Mermet abbots were the first dowsers expression with performance in this specialty. Alexis Bouly conducted research on bacterial cultures in different hospitals collaboration with the medical staff. Alexis Mermet, as a result of its extraordinary skill, began to be sought by patients for their evil diagnosticase them. Between 1930 and 1950 they are published in France a series of works that address always call medical dowsing. Its authors are: Alexis Bouly, Alexis Mermet, Emile Christophe Lacroix to l'Henry, Antoine Bovis, Dr. Naret, Henry de France, Louis Turenne, Jean Louis Bourdoux, W. Herrincky-Servranx, etc, etc. Proposing the most varied methods of analysis. Time passed, but the work of these pioneers enabled us to define a rational and safe methodology.

The dowsing diagnosis when performed by a dowser trained and equipped

Instrumentation adequate job, it reached levels of success and could say "foresight" possible only in orthodox medicine to so many laboratory tests. For him ordinary citizen, preventive diagnosis is beyond the scope of pocket due to high costs of modern medicine and homeopathy because almost only takes a holistic view and addresses predisposing factors to specific diseases.

Being a research area where the ethical factor is preponderant, we extend a little about the subject.

Recent years have seen too many erroneous diagnoses dowsing, which only dowsing comes to harm as a discipline, especially because of the lack of preparation its practitioners. It based on the lack of certain "color" diagnosis and consequent emission thereof it disclosed least primitive. As the diagnosis of "misalignment chakras and karmic causes" has how objective pushing for subjective, metaphysical, which in Most often it is not.

This work has as a proposal to encourage the practice of any kind of medicine by non-authorized persons instead it goes to that professional health area in your daily practice is faced with the difficulties of diagnosis and find the dowsing a beautiful auxiliary tool.

124

The dowsing diagnosis is not proposed to replace the diagnosis and medical guidance. He dowsing diagnosis does not investigate the physical body, your area of concern is the etheric body, theosophy known as etheric double, subtle faithful copy of the physical body.

Currently dowsing is practiced in the area of health according to different approaches that They can be summarized in three groups or sets of methods:

1st method: Direct Research remedy without the development of a diagnosis:

Jean Louis Bourdoux technique. This method for the diagnosis of the disease is secondary court, sufficing find the remedy because the approach is the brevity and quick cure.

Positive aspects: Simplicity of dowsing research allied to the speed; any preconception about diseases; all remedy can be tested, whatever its classic application. The dowser no need therapeutic knowledge, simply be a sensible practical.

Negatives: The absence of a thread can determine the difficulty of choice for better treatment for the patient. Large number of remedies to try, limiting the selection to those available in homeopathic apothecary dowser.

2nd method: Diagnosis and recovery radiesthesic remedy

Pioneering technique of dowsing: Bouly, Mermet, Bovis, etc, etc.

Research signs of disease; anatomical location, numbers series, fundamental rays, settings, colors, disease rates, rates organs, etc.

Found the disease then investigate which one or prescribe remedies. Normally used is always the same range of products.

Positives: The radiesthesic diagnosis is controlled by a thread driver logic. Normally the number of remedies is limited to a drug store, making it easy to know their

characteristics and master its forms.

Negatives: The wide spectrum of possible aspects of diseases dowsing present can induce the false leads. The complexity of demand diagnosis a long analysis time, thus increasing the error factor.

3rd method: typological Research and Psychosomatic Medicine

Technique inspired by the methods of the radionicistas, especially David V. Tansley

This type of research examines all aspects of the subtle anatomy of man, bodies, chakras and rays. Analysis of emotional factors, astrological, karmic, etc. He objective treatment the root cause trying to redirect the patient's original condition.

Positives: more comprehensive diagnosis under analysis subtle factors and psychic aspects. Trend for slower cures, however deeper than other methods.

125

Negatives: The dowser need to have sound knowledge in areas taken as esoteric, occult and, for lack of any kind of orthodox teaching, they are usually presented as forms of religion, magic, mixed with beliefs, superstition and atavism. It is on slippery ground.

Dowsing in the area of health reveals an extraordinary utility when used in conjunction with other diagnostic techniques, for example, kinesiology, the pulsologia, RAC, or El Ring-test.

Always use a witness to the patient to make the diagnosis, although the patient Find your forehead. Thus facilitate their mental questioning. In the case of proceed to analyze the distance, must wear a witness, attempted the same exclusively by mentally tune its error rate is higher than the target as the research "dowsing in the area of health", or welfare of others, will not be achieved.

The technique for selecting remedies should always be the same, regardless of method used. Put on your forehead apothecary remedies (if not find a sale you can manufacture it, sufficing a low box or small suitcase and homeopathic remedies in low energizing in single dose glass; make a card separation between the rows of glasses). Witness the patient should be on your right, under the pendulum. With the indicator Left hand or with a pointer indicating go one by one the remedies, remove the apothecary those that the pendulum indicates, through its clockwise rotation. At the end of this first part, put out a little apothecary and available remedies chosen your front row. Repeat of choice. He will go to see that the initial seven or eight remedies are now selected probably a maximum of four.

Whatever the analysis to be performed, always proceed as described above: research material placed on the left or front and testimony provided to the patient right, in a place that is comfortable to operate the pendulum, in fact the right arm Do not stay in uncomfortable position.

When working on anatomical atlas, list of remedies, list of therapeutic specialties, Always use a fine-tipped pointer.

All aspects involved should be measured in Bovis biometer. The diagnosis dowsing is a slow task.

All remedies, homeopathic, flower extracts, vibrations of gems, phytotherapy,

etc. They should be chosen radiesthesically and dilutions thereof potencies, forms of application and schedules.

All new textual evidence must necessarily be assessed in the decagon.

What follows is a work proposal, there will surely be others.

Be here a section of text Foye " *The pendulum can not do everything or solve everything, and - excluding exceptional powers quite rare - it is not safe to use it outside their own professional activity that allows controls .* "

126

Many of the patients who seek some alternative therapy technique, or some of called "healing arts" are those for which orthodox medicine did not present positive results, those who did not react positively to any treatment.

We work on the implementation of diagnostic distinguished two types of fields.

- 1) We proceed to the development of classical diagnosis, physical aspects present. The advantage of this procedure is to obtain an opinion that can be compared to clinical tests that the customer will surely and thus consolidate an opinion on the case.
- 2) Analysis of energy factors, impossible to be investigated by the traditional medicine

For good results obtained in dowsing in the area of health, some conditions They are necessary:

- 1) dowser well trained. (Training favorable responses. Affinity with health work.)
- 2) The analysis was based on an express request of the patient ?, Or is aware of the fact?
- 3) have agreed to make an eventual energy therapy.
- 4) A rational diagnostic system that allows progress in research, such as example:
 - a) A set of plates, graphics or listing containing all body systems human, where the work begins.
 - b) List of bodies divided by systems.
 - c) List of the main causers factors disorders.
 - d) List of the subtle anatomy of man.
 - e) List causadoras esoteric causes of disorders.
 - f) code of therapeutic techniques.
 - g) code of homeopathic remedies and various energy.
 - h) Botica with major homeopathic remedies and energy.
 - i) Set for cabalistic dowsing pendulums, pendulums utility, compass, Bovis biometer, set appropriate emitters graphics, batteries or dowsing

5) Intellectual diagnostic assessment obtained, for what it is indispensable knowledge of anatomy, pathology, psychology, etc.

The unmanifested Energy

In humans under normal conditions of health, life force animates physical matter and It keeps the whole organism in a harmonious operation. When a person suffers is because This vital force always was affected by the influence of an enemy morbid agent of the life. So Hahnemann was expressed in 1810 in the "Organon ...". Also he postulated existence of patterns of imbalance of vital energy he called miasma.

Miasma action is related to the expression of certain forces acting on the matter, in the matter case alive.

Miasmas are not infections caused by microorganisms. Miasma are imbalances energy source inhabit the etheric body are the result of practices or habits, diseases or contamination, may also be a consequence of patterns hereditary.

Miasma are related to the constitution and temperament of the individual and are the basis of any chronic condition. Being dynamic in nature, they can only be eliminated dynamically. The most important is the miasma of psora and constitutional basis any disease. When treatment, this is the last miasma to be eliminated.

Syphilis and tuberculosis are hereditary. Toxins infections acquired in childhood, worms, whooping cough, chicken pox, measles, staphylococcus aureus, bacillus coli produce symptoms chronic later in life. Chronic miasma of tuberculosis is causer of a number of diseases: asthma, allergic conditions, sinusitis, disturbances, mental, equizema, laryngeal and pharyngeal problems, headaches, colitis, diabetes, Hodgkin's disease, leukemia. He miasma of tuberculosis is related to the occurrence of cancer in the elderly.

Some aspects of Western civilization, technology and some practical miasmata some therapeutic added to existing. Miasma: cancer, tuberculosis, syphilis, psychoses, psora, petrochemical, heavy metals and Miasmatic conditions deriving vaccine toxins, viruses, etc.

This is par excellence an ideal field of application for dowsing, and it is not enable detection of one or more miasmata by any diagnostic technique which not anamnesis. A dowser fully tuned to homeopathic doctrine may be invaluable help to define accurately a diagnosis.

A good reference material for the book therapist is dowser Medicine Psiónica, JH Reyner, introducing the unitary theory of disease dr. McDonagh, which suggests that diseases arise from a disharmony of vital energy in the body, is responsible for the formation of proteins, the basis for psionic medicine Dr. Georges Laurence. The book also has an interesting approach to dowsing diagnosis base the technique described here.

Research in the area of health based on new paradigms is not the prerogative "our". Acceptance of astrological work of Carl Gustav Jung in a way legitimizes new fields approach.

The disorders that cause the disease can be found in the physical, etheric, astral and mental. Beyond the remedies related pathology is present investigate the therapeutic advisable for subtle causes.

All energy therapies or radionics dowsing demand type Therapist great attention and vigilance as to the time of application of these therapies.

The fantastic results for years followed by Delawarr Laboratories, in England, they give us the certainty of process efficiency. Léon personal disasters Chaumery and Enel serve as warnings about the dangers involved. For its energy character this type of therapy does not give immediate indications on possible failures. problems related to bad evaluations, with prolonged exposure, etc., may give rise to more Later in the patient its harmful effects, so do not underestimate the dangers involved.

In the area of health, the dowsing and radionics have a close relationship: the two techniques allow the preparation of a diagnostic in loco or distance and as well as Radionics does, also certain techniques dowsing allow the application of a treatment distance.

Radionics best therapists are in essence persons endowed with a mind active with capacity for abstract reasoning.

Graphics devices will be driven primarily by a mind no and yes passive energy where the interceptor graphic fact trigger the dynamic process.

In a booklet dated 1966, in fact a manual machine operation Radionics, Georges de la Warr writes: "Radionics is the science of the interaction between the mind and the Matter. "In Radionics not the physical body is diagnosed directly, if you access and interact with the etheric body, energetic counterpart of the physical body.

This text was widely distributed, both radionicistas therefore dowsers Belgians, Servranx brothers, who slowly began to introduce in its publication Periodic (EXDOCIN) concepts related to the subtle aspect of man. slowly universe preparing the field for a more subtle approach; to the energy aspects, because, expressed as text Warr, if the reading was not of the physical body but as of the subtle, why not take this possibility further? In 1970, David Tansley, radionicistas, dowser and author of some of the best books on the subject, reports: "Radionics and subtle anatomy of man. "For the first time a job dowsing / Radionics is released to study of the subtle aspects of human beings. Studious work of Alice Bailey, Tansley masterfully introduces the analysis of energy condition of chakras and establishes a map reliable occult anatomy of man. All works published subsequent years They drank from this source. Tansley, in his later works, continues the operation of theme (See bibliography).

Subtle Anatomy of Man:

The man has a subtle anatomy that relates to the forces surrounding it and the the universe in general, and of which depends on the physical form to express life. Any imbalance in mutual interaction energies between the various aspects of the anatomy subtle, or between man and the forces surrounding it, resulting in the disease.

The subtle human anatomy is composed of seven planes that above for low are the following: the Divine, the monadic, the spiritual, the intuitive, mental, emotional, and finally the physical-etheric.

Plans or bodies on which we stop are in the bottom three.

The highest aspect of man is on the monadic plan. This aspect uses the soul as a vehicle of expression, which is in the higher mental planes. The soul, meanwhile, uses the lower self to gain experience in the three worlds lower mental planes, emotional and physical plan plan.

The man is manifested by a triplicity of spirit, soul and body. Pure spirit is analogous to the Father in heaven, the soul is superior, and the body will be less. Being less is of tríplice nature, it is formed by the mental body, emotional body, and physical body etheric.

The mental body is constituted of mental substance, or Chitta. And the most subtle bodies used by the soul.

The astral body is the vehicle through which emotion is experienced. And where They experience the pairs of opposites, such as pleasure and pain, fear and anger, etc. most of individuals working very strongly through this body, and as a result that emerges a lot of diseases, constant and chaotic interleaving the energies in your inside. The higher the degree of evolution of man, the fewer patterns Vibratory your astral body. Man has developed only five patterns, while the common man will have nine to fifty or more.

The etheric body is the densest of the subtle mechanisms, vitalizes and energizes the body physical, and integrates the individual in the energy field of the Earth.

The physical body composed of various organ systems, and materials comprising dense, liquid and gaseous, allows the soul in its fullness, expressed on the physical plane.

The etheric body has three basic functions, all interrelated. Act like receptor, as assimilator and as a transmitter of energy. If each of these functions holds steady state, the physical body will reflect this exchange of energy as a state of good health. Several factors can disrupt the flow of energy through the body etheric. These locks are miasma, toxins, physical anomalies, areas Traumatized or diseased states and magic.

The main miasma are three: syphilis, psora and sycosis. Although currently being miasma considered tuberculosis, cancer and chemical / industrial use. They may originate inherited or have been contracted during life.

Some diseases of childhood can leave toxic residues, which later can affect the health of the adult. Vaccines and toxic industrial waste are also Causing imbalances in the etheric body. The common people presents problems related to the use of aluminum pans.

Lack of coordination between the etheric body and the physical body can weaken health physical. That happens often in cases of mediumship, when the etheric body is

separate physical to allow entry of the disembodied entity. Also it occurs in cases of obsession, enchantment, magic, in a less visible way but surely more insidiously.

Energy emanations from subtle bodies, chakras, of the thought forms, etc. physical body produce about one multi-colored phenomenon, closely related to the quality of the energies present.

This phenomenon called aura, the latin aurum, is known from ancient time. We have an example of that in the saints of the Catholic Church, the golden ring above head representing the high spirit; Aura.

In the normal individual's aura it manifests with extremely bright colors, projecting to outside the physical body with a gentle vibration.

Chakras

The word Chakra or Tchakra, from Sanskrit, meaning wheel.

Each chakra is composed of three concentric spirals energies and interlinked, whose rotation is intensified to the extent of inner development of the individual.

The energy captured can be originating from the most diverse sources; cosmic origin, the collective unconscious of the physical, astral and mental plans, etc.

Chakras etheric originate where power lines cross.

The chakras have three main functions: vitalize the physical body; make development of self-consciousness; transmit spiritual energy, in order to raise the individual to a plane spiritual.

The chakra energy flowing through the physical body through energy channels: Nadis.

Base chakra - Muladhara

This chakra is located at the end of the spine. It's related to Adrenal glands, and governs the spine and kidneys.

Adrenal are constituted by an inner medulla covered by an extract, called cortex. The supra-renal medulla chromaffin consists of a tissue, and is an extension endocrine autonomic nervous system

Adrenal produce the hormone adrenaline.

The substance of the physical body is animated by the base chakra. The energies of the Kundalini, once awakened and controlled in full consciousness, progress column top, following a geometric pattern similar to the two serpents interlaced caduceus symbol Arts healing. Interestingly you can see the same pattern in the propeller pair of molecules DNA, which contains the code of life.

Sacral Chakra - Svadhistana

Located in the pelvis, related to the gonads. Governs the reproductive system. A the consequences of modern life is the overstimulation of the energies of this chakra.

Propaganda and media stimulate our imagination in the sense an increase in sexual desire. Much of today's consumer products are inducing disclosed the sale, through a sexual connotation.

Many times a mediúnica experience produces a period of sexual imbalance, mainly in carriers of sexual maladjustments. The mystic, connecting energies superiors, find some that are manifested through the lower creative centers, rather expressed by the top creative center which is the throat chakra. This leads to the stimulation of sexual activity and imagination, ultimately leading to pathology both physical and psychological nature.

Solar Plexus Chakra - Manipura

Governs the pancreas gland has both exocrine and endocrine function. The biggest part of the gland secretes pancreatic juice, whose enzymes help digest proteins, carbohydrates and fats. Endocrine gland portion is formed by small groups Islets of Langerhans calls cells that secrete insulin, which plays a role important in controlling sugar metabolism.

It is common to find this deregulated chakra, and that ordinary people act strongly through the astral body. Today's society greatly stimulates the nervous, aggressive behavior, strong emotions, radical sports. Television has negatively contributed to the worsening of this painting, exploring human misery and show it to us as information. When we identify with remote events, we are victims of an imbalance at the level of astral body. The daily repetition eventually produce psychological and physical changes.

It is believed that dysfunction solar plexus chakra is one of the most important causes Cancer.

Heart Chakra - Anahata

If connecting to the thymus gland. Little is known about this gland. It is believed this related in cases of lupus erythematosus, rheumatoid arthritis, ulcerative colitis and myasthenia. He thymus is proportionally greater in the child, as it advances its growth, thymus decreases.

Raising energies of the solar plexus chakra to heart what happens in individuals who are developing the ability to think and act in group terms.

Heart disease, blood circulatory system and can be treated by This chakra.

Laryngeal Chakra - Vishuddha

If communicates with the thyroid gland. These glands are associated with growth and oxidative processes, and parathyroid with calcium metabolism.

This chakra governs the lungs, bronchi, voice and digestive tract. A crash emotional problems can result in asthmatics, this chakra imbalances can lead vertigo problems, allergies, anemia, fatigue, menstrual irregularities and disorders breathing.

Front Chakra - Ajna

Governs the pituitary gland. Modern medicine recognizes the pituitary gland as controlling the endocrine system. This chakra plays important role in the expression personality and, when active, generates a magnetic attractive and rich resource and individual leadership. This chakra is responsible, when imbalance, disease the brain, eyes, nose, ears and nervous system.

Crown Chakra - Sahasrara

This chakra it is located at the top of the head, is related to the gland pineal, and governs the upper brain and right eye. The full development of this chakra creates a vast aura of light, whose beauty and magnitude outshines any other chakra and indicates the Budding perfect man.

The ancients recognized the importance of the thymus and pineal glands as manifestations of coronary heart and chakras. They taught that the beginning of life He anchored in the heart by the power wires, and that the principle of consciousness is anchored in the pineal center. This energy cord connects the physical body with the subtle mechanisms. The thread Linked to the head is disconnected during sleep and physical consciousness abandons us. He thread of consciousness is temporarily cut epileptic seizures and other states unconsciousness.

pranic triangle.

The organic vitality is closely related to the operation of chakra spleen. The health of the physical body depends on a good absorption of prana. Popularizing yoga in the West has led some people to the practice of pranayama exercises breathing to increase the absorption of prana. But the wrong conduct of such exercises It can cause overstimulation of the etheric body, carrying mental disorders and physiological.

Some esoteric schools had the spleen chakra as one of the main, in place of the sacral chakra, this in an attempt to keep them at number seven. However the spleen chakra, whose function is to distribute prana in the etheric body is part of a group separately, consisting of three chakras, the other two components are the subdiaphragmatic and I supracardiac.

The Seven Rays

Ray is the name given to a particular force or type of energy, seven is the number. Every human being or form in nature is related to one of the seven rays. rays determine the physical conditions and emotional quality, every ray has different levels energy and govern specific chakras. Rays predispose humans to certain qualities and foibles. Energy rays esoteric determines the constitution of man.

For dowsing practitioner, knowledge of energy rays allows understand our mental, emotional and physical tendencies. With proper sensitivity and

intense training, the practitioner will determine which rays are acting in certain person, the conditions of chakras and organic functionality.

Once again I see by reference to the work of David V. Tansley, who in his two books Chakras, Rays and Radionics and trajectories of the Rays and Chakras Portales He tried, with the talent that was quirky, a difficult matter how this, including making known only adaptation of Alice Bailey's work for the intended purpose. And with a reverence for the teacher that I propose reading (see bibliography).

Ray analysis, conducted radiesthetically is, surely, one of the most difficult tasks which may hold one dowser. None of the techniques are the graphics or filters (homeopathic preparations), is fully effective for the purpose. In my practice, rarely I was totally convinced of the complete success of the analysis, however, when this occurred reading the resulting profile was such that revealingly widely justified the effort required.

an example of dowsing for health diagnosis follows:

- The analysis was based on an express request of the patient ?, Or is aware of the fact?
- Does your consent for eventual energy therapy?
- Use a Bovis biometer all the time analysis to determine percentage of imbalance.

Your client has a complaint? Say: stomach pain:

1) - Systems Analysis:

- a) The XX system is related to stomach pain Fulano?
- b) The XXX system is related to stomach pain Fulano?
- c) etc.

Write down all systems with positive response

2) - investigate all related bodies detected in one system) .

Evaluate the efficiency percentage of the organs of balance.

3) - investigate all conditions related to organ detected in 2).

4) - To investigate all cases involving organs detected in 2).

5) - Research imbalances glands

6) - Investigate leaves emotions I and II.

7) - Research subtle aspects

- a) - Balancing the chakras Cause of imbalance of the chakras: Physically overactive underactive
Lack of coordination

- b) - As energy rays it is manifesting itself in bodies

8) - Voltage geopathic

(See chapter on Geobiology) All patients resident in places with high rate of geopathic stress will not react positively to any treatment, while the employer does not is rebalanced or while going over to reside elsewhere.

9) - "magic" Causes

psychic and esoteric order imbalances

Auto-enchancement

traumatic experience

psychic interference

astral poisons

obsolete behavior patterns

psychic implant

Due to its characteristics, dowsing in the area of health is a precious instrument. Analysis of the "hidden" disease causative factors. Today we know that disease is simply the result of an imbalance of vital energy, so great importance that the dowser should exempt these aspects.

In the chapter on Kabbalistic dowsing this issue will be addressed more depth. Very careful forays into this area. As Baudelaire wrote: *"The most cunning of the devil is in the make believe he does not exist"*.

10) - Diagnose treatment techniques applicable to the case studied

Some techniques, when used in conjunction with dowsing / Radionics, foster good results: homeopathy, flower essences, Schüssler salts, color therapy.

You want a hint? Then press treatment!

When some sort of projection distance occurs first work systems or bodies that had the lowest rates in the biometer. Go respecting time application in dowsing clock. Once the first applications are made, check in the biometer the resulting indices thus evaluate the efficiency of applications. Look eliminate pain or nonconformities entry, sandwiching applications. This will, as a collateral result, increase patient confidence and consequent This positive participation in the process. Like all other therapies, related to dowsing and / or Radionics can be displayed inefficient, not discouraged. Look analyze the If another perspective or, even, revalúelo depending on possible changes occurred.

All individual dowsing charts or in the form of specialized notebooks They can be found in our book graphics on dowsing.

135

The differential spectrum

Jean de La Foye, French engineer and dowser, who died in 1982, had a role fundamental in the study of waves so, so much that we can divide this study two periods: before and after Foye. His book **Waves Waves Life Death**, reveals us dowser of exceptional gifts. As luck would be student of André de Belizal and Gaston Jean Bardet collaborator, the creator of the principles of Kabbalistic dowsing. Jean La Foye perfected most Belizal instruments based on new concepts.

bright and restless researcher realized in some questionable notions body study of waveforms produced by Chaumery-Belizal. Objecting about name "colors", because it is in reality non-chromatic emissions, which touches the so called "waveforms", currently called EIFs. Prepares a proposal theoretical about the definition of EIFS, that Belizal were "the result of the insertion of a geometric shape in space, which, once saturated state energy potential EIFs, broke the state transforming it into dynamic resulting in a directed issue, according the orientation of the form.

According to La Foye they are
Polarized requires three factors
The rise of a FIE:

It was the differential spectrum. equipped
with universal pendulum and a walk around a tree taking between thumb and finger

136

Index free hand a leaf any plant, using this method to detect
vibrations can not be tuned, seeing the tree, a healthy walnut, be in harmony
with vibration environment could see the presence of the 12 emission characteristics
from Ecuador ball (in the shaft body).

The body of the tree or Polarized body brings out the field so diffuse colors
the detectable range with the pendulum beyond this the polarities (+ and -), respectively
east and west and, at a distance equal to twice the beam of polarized body, an issue
real (dynamic state) (detectable without pendulum) called Aura, presenting 12
color spectrum in electrical phase, east, and 12 colors in the same magnetic phase, to west.

In addition to this virtual circle only the polarities are detected at a distance La
Foye supposed to be a function of beam trunk. Dowsing polarities are derived from
Earth rotation.

The polarized material body together, seems to between
the positive and negative polarity of the causes (along with aura). A
horizontal plane, their colors are indistinct and all detections
They require an artifice.

Continuing his work, La Foye placed on a table a wooden cylinder

in the center, bored vertically (through hole), he introduced a straight wire covers with one end bent at 90 °. It turning the horizontal part of the thread on the shaft found what:

- a) The axis of rotation creates a vertical negative.
- b) The horizontal axis NS, the needle through the axis of the rotation is positive.
- c) A virtual circumference, whose beam is the length of the needle, divided into two semicircles, from positive to East and West negative polarity.
- d) The horizontal end of the wire is positive, the opposite virtual diameter is negative.
- e) form waves are emitted to the south, outside the virtual circle, and correspond to the Aura different colors corresponding to the color targeted by the needle.
- f) The angle 320 ° invalidates all polarities, is the equilibrium point field shape.

This experience indicates that creating waves form seems to have originated in a distribution of polarities, which would explain its presence detectable by the PU in various energy, chemical, acoustic, electric, etc. manifestations In an earlier chapter waveforms, we refer to the theory of Foye on the genesis of their relationship and polarities of the materials used to make them emerge.

With a PU, which can detect the body polarized in the flame of a candle and the aura is twice Beam width flame. Erasing the candle, everyone assumes. The same phenomenon is perceptible in a chemical reaction in progress.

137

The levels

Through the waves emitted by a new device through a prism of wood (Similar to the optical prism Newton), La Foye found through PU established in color question, two questions at the exit of the prism: an offset relative to the axis of issue and one that was ongoing with no apparent deviation. However, invited to lend their technical collaboration in dowsing Jean Gaston Bardet, research for the realization of Book Mystique et Magies, had the first contact with the Hebrew language. With the words Hebraic supplied by Bardet could then check that there are three levels emission waveforms. The words used on cylindrical pendulums were depolarized the following: for the first broadcast offset in relation to the original axis of the emission, used H hA word R Ts (Haaretz) - Earth, and named emission level "Physical".

Emission not deviated by the prism was then intercepted by a witness living plant or animal. Ph LN YH Sh cH (A Nefesh Raiah) - "The Breath of Life" was the word used printed on the cylindrical pendulum, and this level of emission took the name of "Vital".

A third and final level could be detected there earlier testimony, interceptor this time was the testimony of a living human being or dead, the Hebrew word used: RW cH (Ruah) - The Spirit emission level for "Spiritual"

Finally, after this testimony is nothing more detectable. According The Foye, is It is a negation of pure materialism, shows that man has something more than the

animal. Is absolutely right, we'll see that later in Kabbalistic dowsing.

The Foye concluded that the three emission levels waveforms occurring in three different fields: the physical, the vital and spiritual. La Foye here used the scientific notion of field: space portion where phenomena occur. Field not sought by the complexity his was the spiritual phenomena, which led to La Foye to cultivate a rejection of this issue.

Depolarized forms have the danger of presenting resonance with the spiritual level under influence conscious or involuntary and can alter the characteristics of the other two levels. La Foye called them magical. Avoid using spiritual level as emissions saturating the apparatus making it unfit for use and causing error in the detection. The unfinished forms, such as the semi-sphere emit spiritual. Releasable the a dowsing battery spiritual enough to record two perpendicular diameters in the flat face of the last semi-sphere; this increases the accuracy of the emission energy and prevents saturation by intruders of any kind. In the case of the form of different geometry, the center of the straight it is to investigate, not to alter broadcast "physical". Although the name is the same spiritual level and spiritual level, dowsing, are not the same thing, however, dowsing apparatus in which the said level has not been removed may link this emission plane, at the express wish of the operator and also involuntarily. The same It happens to acts of magic or influences of any kind.

138

The Hebrew Alphabet

He is invited by Jean
Gaston Bardet to collaborate on
the dowsing research
the preparation of the book Mystics
and Magic, Jean de La Foye takes
contact with one aspect
Alphabet extraordinary
hebraico: it emits waves
so the value of the word. HE
Here is square alphabet
massorética without stress, to
excluding the traditional rabbinical or
Warped Kabbalists
creators of Pentacles.

The Hebrew is read from the
right to left, are
22 characters numbered
mail your order in
the alphabet. five characters
They have double numbering and
different graphics as they
They are in the body
or when a word ends
word.

Latin equivalents

of the Hebrew words
They have normal reading
the left to the right.

Bardet as well
rediscovered numbering
Hebrew alphabet, which he believed
be original, different from the traditional numbering of the Jewish cabal. The Bardet is
sequentially, from 1 to 27, much more adapted to reality and allows materializing geometrically
a rod (pole) the expression of a number. For example, the word Life (Raiah), the equivalent
Node Life the two phases, 10+ 8+ numerically 5 = 23 which the overall length of
stick with a groove 8 and another at 18, he gets to the way of antenna tip 5, allows
lift information.

139

Secret Treasure in Israel, and Mystique et Magies Jean Gaston Bardet books disorre
length about the Hebrew Tetragrammaton YHWH, one of the expressions possible with God, and
whose character, so sacred, it prevents be pronounced. La Foye is taken to dowsing study
this expression when the Bardet work together.

Hebrew Tetragrammaton YHWH (Jeová) is formed by representative letters numbers
defining the pentagon, the hexagon and decagon: Yod (Y) = 10, I (H) = 5 and Waw (W) = 6.
Analyzing the direction of emission of these three letters, Yod Foye discovered that emits green
Magnetic positive (180 degrees), the I
Electrical emits Black (105 degrees) and
Waw emits 320 degrees between Orange
and magnetic Rojo. Designing shafts
issuance of this letter, La Foye found
the Hebrew characters alone
They sufficed to create a form field
detectable on the perimeter of a
virtual circle. These axes grade
emission were called Axles
Form field managers. As
above, when the study of
forms of pentagons, hexagons,
decagons, he noted the need for
addition of the corresponding ray at vee
60 °.

Equatorial Disco, in the form of
a chart designed on paper or on a disc cut wood, is the first application
practice we just saw. On a wooden disc 30 centimeters in diameter and 2
centimeters thick, La Foye Slotted steering axles.

1 -. The North-South artificial, the Yod, 0 ° -180 ° diameter

2 - The diameter of Waw, 140° - 320° ,

3 - The diameter of He, 105° - 285° .

4 - The perpendicular diameter of Negative Verdes, 90° - 270° , to cancel emissions spiritual level.

5 - The UV ray Electrical, 60° (La Foye verified by the guiding field).

6 - A through the center of the disc at the intersection of the axes bored.

140

The equatorial disc Jean de La Foye works with a copper needle bent at "L", embedded in the central bored. When this needle is the size ray disc or a little smaller, an emission occurs in the 180° on the vibration to which the needle points. This issue is the spectrum of the **differential**. However, if the needle is equal to half the beam the disc or a little smaller, the wave spectrum will be sent **undifferentiated**. Let's see some features of that disc:

In Equatorial Disco it is possible to detect the vibration emitted by a form or a witness placed in front of the Green Positive Magnetic (180° degrees). You can thus, meet the wave-disease and ill-curator of a wave. To treat a living being (man, animal or plant) simply submit testimony to the action of the wave-curator necessarily in phase magnetic. Treatment by Equatorial Disco there is no danger, because the issue It ceases automatically whenever a saturation occurs.

With the needle at rest at any point of the disc, and a witness placed against the 180° , is detected on the center of the disc (-) polarity. And axis 0° / 180° polarity (+) The

detection wave-disease mandatory electrical phase will give polarity (-) of the control and (+) underneath. The emission-cure magnetic phase will give the opposite in Shin polarities and vertical testimony.

The analysis will give us any magically at resonance (+) on how the opposite below 180 ° rotation in the colors of the spectrum, Aura remaining stable.

141

In the equatorial disc needle about 320 ° nullifies polarities. 320 ° is the point Balancing set of waveforms, however detectable with the pendulum.

The equatorial disc is a sophisticated screening tool for everyone working within the specialty "Wave Form". But it lacks power so that it can be used as efficiently emitting instrument. use is absolutely essential artifício any amplifier. For example, a solenoid good size at the output and for north entrance some dowsing battery out of use, the table with wake up more on some plates or, even, connecting us 110 Volts. radiesthesically pick your choice.

The advantage of slotting the Directors of Field axes so is that you can build independent apparatus natural fields.

The field form (physical and vital) has an orientation own discovery by La Foye. With a magnetized needle inside a circle in yarn covering found that, on the wire (Polarized Body) and the virtual circle dual beam (Aura), emissions are offset 5 degrees (North West to) relative to the longitudinal axis of the needle

The deviation of 5 degrees form field relative to the magnetic field was found in western Europe and, therefore, it is necessary to verify whether in Brazil or not this diversion of 5 degrees.

Vital Field

After countless investigations concluded that the structure of the field is generated Vital by an exponential law base 2. The cell multiplication (mitosis), with division into two each cell-mother, fully demonstrates the exponential character (base 2) Vital Field. According to La Foye, Vital Field shines (Banha) the physical realm and this could not exist without it. By that investigated the geometric expression of these two fields from the two circles Polarized representative of the body (undifferentiated spectrum) and Aura (Spectrum differentiated). It registered successive double circles diameters relative to their preceding immediate, i.e., with diameters geometrically base 2. At intersections is those circles could then inscribe and circumscribe successive hexagons and in that structure verified the possibility of inscribing pentagons and decagon. The relationship of the hexagon, the pentagon and the decagon with the mineral kingdom and living beings is easily perceived in the quartz crystals, flower beds, hands, etc.

Jean de La Foye could detect the vital field on a plant without the use of artifício, strongly tilting the vessel. That shook the balance of the plant, making that the issue pass the potential for dynamic. Vital Field discovered by Jean de La Foye has three basic components, distributed and called for its descobridor:

- i) Node Axis Life in Leíste-
West
 - (A) West Life Node
magnetic phase
 - (B) East Node Life
in electrical phase
- ii) Eq in the north-south axis
 - (A) South eQ phase
magnetic
 - (B) North eQ phase
electric
- iii) Shin on the vertical axis

Node Life can be detected with a cylindrical pendulum depolarized with drawing two circles tangent line horizontal; the magnetic phase to west and Electric east. With a rotation of 90 degrees this symbol detects vibration Eq, the phase magnetic south and north electricity. The vertical component is detected with the letter hebraica Shin punctuated in the middle.

Vital as the field exists in the (non-explicit) potential form, a device is needed to detect it. It can be used a sheet of any plant between thumb and hand indicator Free or support your thumb on the little toe bent. With the witness at the center of a circle and Field Vital pendulums at the cardinal points and Shin medium, isolation detect each of the five components. living beings when struck by serious illness, or magic processes, the East-West (Node Life) components may occur in whole or partially reversed.

Balanced living being does not emit perceptibly Vital Field, only potential state. For detection using some device is necessary, support the thumb of the free hand on the minimum bending; take a "barrel" +5 +10 8 10+ 10+ 8+ then or 24; or even take the tip of a blade between the indicator and thumb.

Node Life: Hebrew equivalent is cH YH Viva (female) and CH and Vivo (male) Magnetic emitting phase by the tip 5 or 10 of a "cannon" with corresponding slots the values of the letters and the electrical phase from the other end.

cH YYM (RAIM) Lives emits the magnetic phase in the two ends of the "Canyon"

Node emission life is in the magnetic phase spectrum at 200 ° and 20 ° in phase Electric. That wave can be detected at ground level in plants, in the brain and Navel animals. Node Life is also present in the mouths of humans

dead and the blowholes of live animals. Present in the left temporal humans, indicates the status of life itself. In the case of a vegetable grosso as tree the initial investigation, these vibrations tangential tree.

Life Node vibration is also generated by the movement (which is one of the manifestations of Life), and therefore, it can be detected in a vertical stream underground. The Foye found that the crossing of two emissions node generates Life Green negative electrical emission. Therefore crossing two streams groundwater issues in its vertical this waveform.

cylindrical pendulum

This instrument completed by La Foye has the advantage of not have polarity. As we have seen so far, the polarities play a significant role in dowsing. depolarization It was achieved with the insertion of two parallel slots centric axis. Previously, making a neutral pendulum was much more difficult.

Equatorial Péndulo

It is presented as a wooden sphere with 6 cm diameter as PU has a single slot height Ecuador. In that same plan will be drilled holes relative to Steered axles Form Field, the diameter of the green negative and Ray Vee. In another pole hole north-south pole will ensure the passage of the suspension wire. Finally, a closed cover thread by twisting their limbs allow selection of any one of the 24 colors of the spectrum differentiated. Any detectable station, both in electrical and magnetic, indicate an undifferentiated emission.

Equatorial pendulum Unit

Equal to the above dimensions, this
However instrument is based on a principle
different. The Hebrew word hA cH D (Ehad) "One"
numerically $1 + 8 + 4 = 13$, is used to
Print this instrument balance
for Unit. An equatorial slot and
plus two meridians, the holes in
intersections thereof with Ecuador, which links
the poles Y a
ends in a belt copper index, form
the instrument. Finally, having a fourth
part of a circle above a meridian
grooves, divided into 13 parts, are drilled two
little ones holes in
center address Ball 1/13 and 9/13 of an arc. Where it is suspending
the wire with the holes facing up, indicates the magnetic phase of the selected color, with
holes below, the electrical stage. When rotating indifferently in the two phases will be indicative of
a broadcast or undifferentiated EIF. For the study Wave Form, the usual orientation is to
 355° north or east to 85° . To avoid the influence of natural magnetic field just inside
circle designed or executed in thread covers a small opening in its perimeter added
two small parallel lines below the beam, projected in the direction of the center. The
form must have its opening oriented to north circle. The issue will be vertical in the
center of the circle, allowing the analysis of the three levels. Other devices may be used, as
a north or even artificially reduced form field, however limiting the analysis.

One of the ideograms Easter Island emits the VI.M in "Physical" and Sh DYM (Shadaïm), the
Demonic powers, RW cH. Anti-magnetic field form This form is constituted by two
Concentric "almonds" aligned north-south. Generally concentric shapes are
subtractive, however the only way in the same north-south alignment issues RWR Ts
(Tsoror) generating + V m there. When the horizontal, or east-west, emits magic wave
Z load of vital magnetism. When two perpendicular lines are inserted into the graphism
eliminates the "magic", passing this to be issued in "Physical".

When the case of open forms need to carry straight or drive axle to the
overboard drawing paper or drawing perpendicular diameters.

It is also possible to transform Electric Magnetic for a symmetrical shape. simply add
two pairs of parallel lines, respectively this and west. To evaluate the inverse is
necessary for the additional game is made straight north and south. These parallel lines
They function as capacitors. If the shape is asymmetrical, simple rotation thereof
north-south east-west just to get a change. This demonstrates the
danger represented by the asymmetry of the shapes of objects, furniture or
Construction fashionable today.

Not only are the shapes taken from the geometry which have the property of emitting, some symbols and alphabets also make clear: the hexagrams of I Ching, the Egyptian hieroglyphs, the figures of Easter Island, etc.

The study of the "Wave Form", EIFS, and in particular the work of Jean de La Foye, It will be the subject of our next book, already under development.

dowsing Kabbalistic

Dowsing Kabbalistic expression spread in Brazil to designate the practice of dowsing pendulums containing words in Hebrew, though this name is not

present in the work of La Foye or that of Jean Gaston Bardet. It was first used by Jacques La Maya in 1983, the book *Medicine Room*. Initially he refers to it as dowsing of Truth (new technique Cabbalistic), later in the work finally Dowsing reduced to Kabbalistic. But in all publications below in Europe this term is not used. comfortable denomination, but failed because it leads to something whose meaning is false. Be here for a clarification: do not confuse the term with Kabbalistic practice of Hebraic cabala or hidden knowledge, mystics, of any lineage. Dowsing technique originated in hebraísta investigations, urban planner, etc, Frenchman Jean Gaston Bardet and dowser Frenchman Jean de La Foye.

Bardet was the discoverer of a fact that came to revolutionize the study of dowsing waves so he discovered that the Biblical Hebrew letters are broadcasters and the words written in that language broadcast in EIFs its own meaning. Only the square Hebrew Pentateuch has this property, as modern Hebrew, with so-called Masoretic points, It is not emitting EIFs. With the help of the dowsing, Bardet discovered although the Waw and Shin They are only emitters although they have a point at the top. He concluded that in the forms primary of Hebraic these letters should be scored.

In one of his works, *firm triune God*, Bardet recounts the curious fact that motivated this discovery ". *I Behold how I discovered this property of Hebrew letters I was in Spain. Jean de La Foye wrote me from Brittany .. A gypsy he was evicted from his secondary residence had cursed the property. Excellent dowser, therefore a very sensitive, Jean de La Foye psyche had 40 degrees fever and did not know how to defend. I will I said to experiment with a pendulum: K Sh Ph (Magic). He immediately detected 'Incantations' and neutralizes its harmful action. If he tried, in the case of 'magical vibrations' and not 'waveforms' which this dowser dominated by agricultural reasons.* "

Pendulums with Hebrew letters or words are issuers themselves and use is not You need no mental convention. The operator must be in the neutral mind and wait the emission of the object from resonating with the wave form emitted by the letter pendulum, causing the pendulum movement. Most related emissions issues that can be detected by dowsing are dextrorotatory, that is, start issuer, that which generates, in a straight line but with the shape of a right-handed spiral. Also the very issue of the Hebrew letters is right-handed. Thus, when the two issues have the same characteristics, the free pendulum suspended on the testimony spontaneously rotates clockwise (in the direction of rotation of spiral energy), demonstrating the presence of energy compatible with the Hebraic expression. Turns to the left and oscilações, in Kabbalistic dowsing, they are desconsiderables. They are the result of involuntary action operator of the pendulum. These movements do not mean "no".

In classical Hebrew, all the letters of the alphabet are assigned numbers; Bardet It found that the numbers did not represent the actual own energy value of each letter, then introduced a new numbering, this sequence of 1 to 27. Later Jean de La Foye It found to be possible to create an emitter that reproduces the vibration of the expression of a word Hebraic. For that, just use a wooden cylinder whose length in centimeters is equal to

corresponding to the sum of the values of the letters of the word in question number.

We exemplify: the word hA WR (Haur = light) emitted UVM and its numerical value is $1 + 6 + 20 = 27$. A wooden cylinder 27 cm long with circular grooves 1 and 7 cm ($1 + 6$) of same extremity, UVM emits at the opposite end from the longitudinal axis of the cylinder match the North-South axis Form (Form North to 355 degrees). The issue will always South of Form. Form for North to print cylinder, making it emit any position, simply place a small nail into the groove (from the end of the word). This cylinder is called barrel and emits magnetic phase in the extremity corresponding to the last letter of the word; the opposite end emits electrical phase. This experience shows that renumbering Bardet attributed by the Hebrew letters is correct and can express real value of graphic expressions with this extraordinary alphabet.

Pendulums "jacketed" with the words in Hebrew and used strictly according to indications prescribed by Bardet / La Foye:

- to) enable specialized research of any state or broadcast any area of human activity, being enough for that to have the right word originally from good sources, with a view to the difficulties imposed by the Hebrew or other alphabets capable of emitting a sense of written word, or even the graphic or icon endowed with the same qualities. (Keep in mind that dowsing is a research practice that makes use supra-sensory of touch, or faculty, man qualifies as a highly sophisticated instrument capable of detecting the most varied emissions, the most varied circumstances).
- b) allow research in an extremely complex and difficult area designation (magic, spiritual, esoteric, parapsychology, etc.) that all care are few and that " *More beautiful cunning of the devil is in persuading he does not exist* ", said Baudelaire, aware of the Flowers of Evil.

A typical application of the point was given to us by the Foye for prospecting water: uses the Hebrew term "will spring water" (Y hA WMYM Ts). With the text to the right, it detects places where it can be boring, where a water pressure, generally on a crossing groundwater flow. With the inverted pendulum text, she goes only react on flows of water and no more than about matings. In a vertical underground stream, the pendulum rotates Life node and, therefore, can be used

in prospecting. The East-West Field Vital component undergoes a deviation of 90 degrees the action of groundwater flow.

Modern physics modified some of our traditional concepts in relation to the matter. For example, we now know that the mere presence of the observer modifies the reactions the phenomenon under observation. And that vision can unintentionally influence, generating a thinking engine transmitted to the fibrils of the fingers, movements They will be amplified by the pendulum. So being in dowsing, you should not stare at the object research, you should look without seeing and to focus behind the object.

Kabbalistic dowsing and magic

Originally, this study is part of the work of Jean de La Foye and is circumscribed the study of wave form. Gaston Jean Bardet using dowsing with pendulums Hebraic words to check the phenomena related to the study of Hebrew, He opened a door later studied by a restricted group here in Brazil. while modesty and strong Christian orientation prevented the creators of the discipline to extend their study in the direction of "hidden" from the traditional magical practice, we, under the influence of environment, develop a proper "like" in the subject which allowed us a certain way "Complete" that gap left in the spiritual realm, reported the book Life Waves Waves Death, Chapter XI.

A new kind of white magic came up with radionics and dowsing wave form, In the specific case of dowsing this matter was treated especially by the brothers Servranx of Belgium. This is a form of ritual magic. Connoisseurs shock hazard return, when practicing the distance emissions, since the circuit is closed on one who sends these emissions do not work like a shot, shooter-white itself as a electrical circuit pilha-lâmpada-pilha, to close the circuit, the receiver acts like a passive filter or naive recipient. The brothers believed Servranx have created a state of \\ "Active conscience" able to keep them sheltered from the effect of the shock return. His death cerebral congestion, and its rather succeeded disciples inconsistently proved his error. The group claimed to suffer adverse effects in series, in their daily lives, including reaching the familiars. Any attempt to create an influence capable of reversing the natural order, creates a imbalance.

We do not go in depth in explaining concepts about what is magic, there too many books dealing with the matter. We would, however, to alert the reader to the involved in this area, in that the wire is so thin shape is dangers invisible most of the time and mistakes are extremely painful.

Magic reverses the vertical component of Vital Field, both in how living things environments. As says La Foye, magic is an inversion of the natural order, it is still a transfer, because the devil creates nothing. Photo of a plant with roots for emitting high magic, magical form of involuntary action, and five-pointed star magic the magician issues

as a form of voluntary action. Papus was careful to practice ceremonial magic only after the execution of exorcisms.

Even within the field of forms, Jean de La Foye found that everything is based on Egyptian proportions or irrational numbers, is magical and devices created from of Hebraic expressions are integers no more.

Odd polygons isolated emit RW cH and Magic.

The shapes that reacting the pendulum K Sh Ph or "Easter Island", the Necromancia or Shin inverted without defined polarity should be considered magical and be discarded. HE may however remove harmful aspect of RW cH, drawing two perpendicular lines in the center of the shape.

All forms added magnetic charge, therefore they are not dangerous, and electrical produce the opposite.

Undifferentiated spectrum rotation by 180 ° on the testimony of a living being gives the indication of the possibility of the existence of a state of magic.

Traditional books of alchemy were produced by two opposite types writers: the "claridosos" those who told the truth, albeit in a veiled way, and "Envious", who also had only a veiled lies with the intention of launch the avid reader on the road to perdition.

Western magic books followed the same tradition, leading the naive wizards bissextos for some hidden embezzlement. They are common in such formulas and pentacles books magic with letters and words in Hebrew, be wary of the majority.

Dowsing pendulums to Kabbalistic can be used in two ways: a right, when you suspended by the thread of the upper side of the letters, or inverted, when suspended to Conversely, on the side low of letters, an example: magic, right and Anti-Magic with inverted pendulum. Not all expressions allow investment.

Vital Field and its five components (Jean de La Foye)

The live and balanced be not emit a sensitive and obviously Field Vital only in potential state. To detect, it is necessary to use devices: thumb bent over finger least take a "barrel" 10+ 8+ 5 cm (life) or 8 +10+ 10+ then 24 cm (lives), or even maintaining a plant leaf between thumb and forefinger.

Call field reversal Vital sign of illness or magic, broken components horizontal and vertical reversed.

Life node - present in west magnetic phase. Also detects the state of life or death as is on the left temple or the area of the holes

150

of the nose to the mouth. Slumbering in the human being, the issue of time left disappears. She is replaced as issuing death by mouth. However, it is possible to detect their state of life by issuing N Ph Sh CH and H. In the living animal, is located at the top of the skull and especially in the mouth and nostrils wave of life. At dead animal or any representation, whether photos or drawings, nothing is detected. This is the Total, absolute, different human death.

Life node - present in read in electrical phase.

Eq. - present in southern magnetic phase.

Eq. - present in the north in electrical phase

Shin - Vital vertical component of the field. Detectable the law, or invested is present a serious illness or a state of magic, it is also sometimes found in deep neuroses and psychoses.

Earth - H hA R Ts (Haaretz) - for detecting the level of physical equivalence.
Invested detects Ve.

The Breath of Life - LN Ph cH YH Sh - (A Nephesh Raiah) - {Genesis 1. 20), psyche to Live, animated - for detecting the emissions level vital equivalence. - He -interfiere vital field in psychic fields.

Spirit - RW cH - (Ruah) - (A) spirit - for detecting the level of equivalence spiritual. It has a right equivalence with the "pneuma" Greek or Latin anima, as opposed the psyche or animus.

RW cH every spiritual issue is inaccurate, for example, a V + m, in RW cH does not give a emission V + m, but the utterance of the word YHWH (Jeová = I am) with W Not rated. To avoid inaccuracies must be eliminated cH RW of any instrument (machine, object or graphic), primarily when attempting to use EIFs in therapy.

Detecting states of magic

Start investigation by the words always more "mild" theory, according Bardet just the fact "sleeving" a pendulum with the word Shatan and then place, for example, "shirt" Magic to distort research.

151

it would be best to have a large number of cylindrical pendulums not be necessary exchange "shirts" with words.

Pendular try as quickly as possible, especially with the most "heavy" words. Exists the real risk of saturating the energy story and have given expression to wait a proper time for this vibration fade.

Simply given pendular testimony is a form of attack on the entity obsesante.

As already mentioned several times, the fact of a pendulum does not respond positively no means that such energy is not present, for example, the pendulum does not rotate with Magic and tour with necromancy, which is also a state of magic.

When the pendulum space is very small (left temple pictured), use a ferrite pointer 12 cm long by 0.7 cm in diameter, the pointed tip on the photo. Pendulum on the opposite end of the pointer.

Strictly the magical point of view, also means Magic Enchantment, sorcery. strongly enamored girl is in a state of enchantment. One case most common is the magic of automagia, the person judging victims or persecuted eventually he vibrates in this tune. Food cooked by who claims, or dislike pragueja you cause magic. Like children too small causes "breaks" another state Magic. Magic States affect the psychological and physical balance. Here are some types:

- Envy provokes very strong Shin invested, Magic and necromancy.

- Oaths or evocation of evil curses cause Shin entities
Inverted, magic, necromancy and evil forces.

- work magic ritual or ceremonial invocations and offerings can generate: Shin
Inverted, magic, necromancy, evil forces, IAVE invested.

- As the magical act performed and depending on the used pantheon, may emerge
states: An enemy, possession, demons, other spellings for Shatan.

- The practice of writing, painting and music is accompanied mediúnicas in
Most of the time, by the turn of necromancy and Sh TN pendulums - The adversary of the Lord.

- The practice of spiritism causes necromancy, in some cases Forces
Mal and IAVE invested.

- Reading Magic oracles causes. When the practitioner arvora in demiurge,
raises necromancy, evil forces, Shin IAVE invested and invested, for himself and for
consultant.

- Necromancia means consulting the dead. This type of "oracle" is practiced from the most
ancient times. Certain queries to the dead, astral representatives of deceased persons,
they are usually quickly answered by his demonic substitutes.

152

- On the pictorial representation of a espírito and astral guide, are detectabais the following
states: on human turns N Ph YH Sh cH - The breath of life - characteristic of all being
lively and alive. What guidance is presented Ts RWR cH YY M- Yarns lives - which remains in
deceased and (B WKK Ph Th HQL chA - The vacuum tank.

- The photos of ghosts are rare, usually they spin N. Sh T and necessary know if the

geobiology:

The text of this chapter is mostly the result of collaboration geologist Marcos Alves de Almeida.

Geobiology - a new word and a new field of study. This science studies interaction of living beings with the environment. The key element for maintaining the terrestrial biosphere is the interaction between cosmic and telluric forces. Dynamic balance between cosmic rays (positive) and (negative) telluric rays is the supporting base lifetime. So that there is a harmony of vibrational field cosmotelúrico, there must be a compensation between the forces of positive polarity (cosmic rays) and negative polarity (Telluric rays). When a break occurs offset forces, consequently also will occur emission of harmful waves is what André de Belizal says.

According Belizal A harmful energy is formed by two independent elements: a wave and a cover carrier wave. The carrier wave is always the V- or any issue of its spectrum, ie, between the White and the Black. Its harmfulness, due to its radioactivity and high penetration. That harmfulness is increased by the action of the generated wave cover a radioactive dry failure, contaminated water, emanation cemetery, underground river, etc ...

In the decades of 20 and 30, the physicist Georges Lakhovsky after lifting the Paris soil characteristics, demonstrated with statistical testing, as the nature of soil can affect the cosmic-telluric interaction weaken living beings and under a long exposure, cause cancer. When the soil is permeable to cosmic rays, there is a good compensation of forces and vibration environment is healthy; conversely, the Soil waterproof reflects cosmic rays to the surface, distorting the local countryside. The soils raincoats are constituted by argilas, marl, coal extracts, xistos, minerals iron, etc. Such soils are electrically conductive. Soil non-conductive (dielectric) They are permeable to cosmic rays and are constituted by sand, gravel, gypsum, lime or rocks crystal. Soil will be much healthier the lower electrical conductivity.

Geobiology is a science that investigates the different relationships between the middle environment and health of living beings. Such a science born of the studies and observations of various dowsing that proved the relationship of cause and effect between exposure to fumes telluric and health disorders. As in the beginning, only the telluric energies were considered, this new science was called Geobiology. subsequent studies they found however that the cosmic energies also interact with living things and Cosmogeobiologia proposed the name to designate this complex discipline. But not only the Earth and the cosmos emit energy that interact with beings, keeping them healthy or

generating diseases. Also constructions, electrical and electronic equipment, the electrical network of railways, power transmission towers, the objects that surround us, the mental field of people and intrusive energies of spiritual origin can affect harmfully. Geobiology uses all the information provided by the sciences Orthodox, measurement and analysis of geophysics, geology, biology, hydrology, of electronics and astrology, dowsing and Feng Shui.

Other relevant aspects affecting living things relate, in addition to the natural imbalances, the creation, by human beings, the energies necessary for the growth of civilization.

Creating electromagnetic fields of industrial chemistry of radioactivity
It allowed the human being a huge social growth in pursuit of comfort and improvement in life conditions. However, what is good for one side is negative on the other, because those inharmonies generate artificial sources in the environment, affecting life as a whole. Added to the natural effects issued by the Earth, as the presence of groundwater movement, fissures and fractures, contacts between rocks, soil types, natural radioactivity, electromagnetic fields, chemical characteristics of terrestrial and cosmic materials, as solar and galactic radiation, they make the survival of life on our planet difficult. Still, life is resisting and adapting to all environmental variations to Over millions of years. However, in the last hundred years, I had an accelerated growth of civilization in search of better conditions and in the same proportions, an increase the disintegration of the environment.

In that sense, Geobiology has the primary function of study and diagnose all harmful anomalies affecting living things and charitable anomalies for comparative purposes and find solutions that help alter, entertain or rebalance the harmful environments.

This text is organized in an order which takes into account the three aspects fundamental that affect life on Earth, the trinomial: EARTH / LIFE / COSMO being Life the environment, which interacts with the ends, the Earth and Sky. Within this approach, He sought to balance the main harmful effects that affect the life of the earth fields electromagnetic, chemical terrestrial and terrestrial radioactivity; COSMO: fields electromagnetic issued to the earth's atmosphere, solar radiation, as ultraviolet, infrared, X-rays, radio waves, microwave, etc. and HUMANS: energy electromagnetic, industrial chemistry and, besides radioactivity energies so disharmonious created by abnormal constructions, sound pollution, colors, heat, biological and other anomalies developed by many home automation modern.

On the market a vast literature on every aspect of these anomalies natural and created by humans, therefore herein has the function of organize research sites to be studied, so that the study has a systematic observation and allows the search for each subject here treated with the function to deepen the understanding of the harmful effects that affect living beings and beneficial for comparative purposes.

Geobiology only unfounded when correctly identifies each anomaly harmful in local studied to diagnose and achieved appropriate solutions.

Geobiology and Dowsing

One of the most important in the study of Geobiology aspects is how

measurement of harmful anomalies. the most effective and practical means used is known: the dowsing. Dowsing is essential in the investigation of the study sites because only through it can be diagnosed correctly and quickly phenomena microvibratórios. Existing market devices are useful for identifying a

series of anomalies affecting living beings, but are limited and suffer influences of adjacencies to the problem sought, as well as be expensive and need technical expertise. By example, a magnetometer may indicate the presence of magnetic field in a place, But it is not sure to be a rusty pipe on which floor, which automatically apparatus and accuse people might assume that there is a great danger, in truth nothing. The same thing happened in a factory aluminum wheels. After casting the wheels, they go through a kind of X-ray detector to be checked if there are no bubbles air in the wheel or any internal defect affecting safety. Interesting to note that apparatus, looking like a barrel, has a thick lead of about half centimeter and official measuring device (Geiger counter type) identifies an anomaly within the standards global statistics, as harmless. But with the dowsing radiation it is captured in a ray hundred and fifty meters around the device, affecting everyone working on site.

The dowser captures abnormalities at the cellular level, because apparently not perceived the emission of X-rays by the five senses, but at the cellular level the body of the person reacts to fend off an invisible enemy extremely harmful, because those radiation have high frequency ionizing electromagnetic (with about 10 Hertz) and length of wave much smaller (about 10 m wide). That would be one of the reasons for the dysfunctions of the body of people and living things in general, since the body You need to live in balanced conditions, with no gain or loss potential energetic. People should live in places whose energy is similar to yours, you should not have excess or lack of adequate energy. If the home has less power than the person, there greater potential loss (person) to the smallest (local). In other words, people Biotic have a healthy energy between 6,500 Å to 10,000 Å wave length in the Bovis biometer, with an average of 7,000 Å. If the person live in a place with 1,000 Å or 2,000 Å Bovis units, she will lose energy to the local; is a physical phenomenon inexorable; he donates energy greater potential for the child to reach equilibrium, ie, the lowest rises and greater decreases to reach the average. As the place never rises, it is the person who loses, up to biotic life limit (4850 Å). Sometimes the person spends twenty years in those local and biotic energy reaches the limit of 6.500 Å and continues to live in the place, more About five or six years, the energy reaches 6,000 Å, more than three years reaches 5,500 Å (level present in carriers of tuberculosis) and in that situation, falling to levels bordering be a jump. Millions of people live in that situation, reasonably they manage to live by exercises and walks during the day, or to work through local energy balanced. The biggest problem occurs after decades exposed to such situations low frequency energy with age above sixty years. At that age, people They walk less, come within the premises; your body is not as resistant to change energy and are more vulnerable to disease, at least the person sit permanently stressed. Animals, when confined in unsanitary premises, resist and immediately they get sick less. Plants generally resist much, it is believed to its adaptation to the environment is incalculable, perhaps for the carrying out of the and through photosynthesis through the roots are the thread-ground, they manage to live or survive well, but their energy biotic, in low-frequency, reaches the range of 4850 Å and still green; in places they reach balanced strip of 7,000 Å or more. So take care to embrace a wrong tree, absorbs energy and other energy loads.

It is interesting that animals naturally avoid sleeping on unhealthy sites. It is no coincidence that the ancients, when they were going to build a house, open farms,

expected to see where cattle going to sleep at night, to quickly build their residence; the Romans, before constructing a building, placed a flock of sheep for pernoctaren in the area, then built to the exact point where the animals slept. The man modern, unhappily, no values his own perception, using only his intellect rational.

It should be understood that the cells of living beings act in microvibratórios levels and They work without rational control. They have the task of organizing and balancing the biotically living organism and, when there are foreign elements, outside the living organism, influencing and trying to affect, the body reacts to the nefarious action by creating internal defenses. Thus, Once cells worry internally balance the living being, they need even, fend off external action dominating trying to destroy the internal defenses until overcome them. Cancer is the enemy installed inside the living organism, while places unhealthy represent the enemy installed outside the body trying to beat him.

Geobiology and waves forms:

Waves or due to the forms must be understood within the context of Geobiology. It should be clear concept of the physical, vital and spiritual fields. IS important to distinguish the three fields. The geobiología acts mainly in the fields physical and vital being the more subtle vital field involves the physical realm. The spiritual field envelops abstract energies, more subtle than the previous; therefore be studied before the vital and physical fields must distinguish the occurrence of harmful dysfunctions in energy premises where the geobiologist go to work. If you have abstract harmful dysfunctions associated with the spiritual field, you must identify by the Kabbalistic dowsing or other means, and providenciar disposal. Emitting forms, while, at the three levels they are apparently depolarized, can, still, be depolarizing, causing imbalances energy in living things (Jean de La Foye). Some aspects of energy so will agreed in this chapter, if you need to study in more detail please report to the chapter about Vibratory waves or waves form of this book or the references cited in the literature.

"Waves propagating in pure form space as directed vibrations and are, then, very sharp, almost seem there is no inert carrier material capable of stop them. However, in the same way that light waves and a glass prism, is You can deflect waves with a prism shaped timber. You can also concentrate them with a convex lens timber and reflect on an inclined mirror. They seem to obey, of Somehow, the laws of optics as light rays leave without photons "(Jean De La Foye). "The waveforms, by analogy with other vibrational waves suffer the same laws reflection, diffraction or refraction "(Belizal and Moreis).

The waveforms are invisible and penetrating, with wavelengths that They approach the light emitted by everything that has form, which releases energy. They find each other in the physical, chemical, physico-chemical, biological, in geometric shapes, finally everything that exists on the globe, perhaps in the universe and have enormous influence over health of living beings. They are microvibratórias waves resonate with the living cell, with harmful or beneficial, it is to distinguish the role of Geobiology.

Underground, rocks, ruptures and fractures, faults, geologic contacts, water moving groundwater contaminated with toxic gases waters, waters swamps vegetable putrefaction, buildings and constructions in general, furniture, utensils

domestic, machines, vehicles, electrical appliances, food, colors, chemicals, caloric energy, acoustic, geometric, high and low, heat and cold, closed and open, it then emits waveforms. Some are dire, others beneficent, the most diffuse. It comes down to the triad, positive, negative and neutral, the active, passive and neutral forces. These energies are space and on the axes orthogonal X, Y, Z. For example, *the active force represents the action, the passive force, reaction and neutral force, point, line, plan or space where the phenomena occur. Usually that point is invisible, but each of the forces can change their power depending on the reference exchange the active force is active in relation to a reference, but it can be passive or neutral in relation to another reference.*

Forms waves are polarized (+ / -) and have frequencies and wavelengths variables. The waveform may have different powers depending on the environment where they act polarized energies. Diffuse energies cause anomalies or benefits, little acting, not to be of concern.

According to Jean de La Foye, they are necessary, which seems a priori three polarized factors to produce a waveform: an energy flow oriented (active agent), an interceptor polarized flux (passive agent) and gravitation (neutral agent), acting on a virtual plane with varying inclination relative to the axis of gravity, perpendicular to the Earth. Wave form behaves as a vector force perpendicular to the flow occurs and energy. The waves so fundamentally depend on the Earth's magnetic field.

A real example of emissions of harmful waves form: water pipeline moving ground (active agent), moving from a higher point, an average slope, called positive, walking to the valley, called negative, showing a difference of gravitational potential (neutral agent), which is made to move in an angular inclined plane between the upper and valley underground. The obstacle or interceptor polarized (agent passive) is represented by the subsuolo that overlies the vent moving water, called the negative and the atmospheric environment, called positive.

The result is a collapse of biotic balance between Earth (-), which emits energy balanced (with Bovis above 6,500 Å) together with the (+) atmosphere and water flow moving underground generating a break of forces, emitting energy forms desequilibrantes, with falling energy biotics smaller than 6,500 values.

Moving water, as if produced microprisms, which divert the energy Biotic balance, from the interior of the earth and passes perpendicular to the surface of the bark Land. That energy, which was initially balanced (with Bovis: 6,500 Å), reaches the surface with half or less of the initial force (eg.: Bovis 2,000 Å), making the unhealthy environment and harmful. That imbalance comes from the passage of groundwater flow moving with the interceptor polarized Land / Atmosphere (- / +).

Water behaves like an electric dipole field to move in a geomagnético-electricity, generated by the Earth itself. an induced electric dipole is issuing a electric power abnormality extent, for example, in KVA unit (KiloVoltAmpère) or the electric potential gradient or electric field strength (V / m). And this generates a field Magnetic measured in nT (nanoTesla) or Gauss. These anomalies are macro microvibratórias harmful to living things, emitting a biotic energy, measured by Bovis biometer, closely

1,000 Å to 3,000 Å. These values vary according to the power generated by the speed moving water, which depends on the inclination of the plane where the water is filtered and moves. That inclined relative to the vertical, where the force of gravity acts, flat becomes more harmful with increasing inclination and less harmful to the horizontal plane relative gravity. It acts similarly to a ball in a horizontal plane and tilts as the plane, she runs faster the highest point to the lowest.

The harmful effects be more powerful with the greatest slope, when the emission Go and other emissions in power. It is known, then the waveform being perpendicular energy flow, also emits a parallel flow vector and another parallel to the axis of the gravity in the Earth-Atmosphere. The latter effect is captured on the surface of ground. You should keep in mind that these phenomena are spatial; the example above restricted to pattern seen in figure on page 226.

Life needs waves so for that reason the depolarizing forms are strongly harmful, Ve stations also broadcasting in the three fields: physical, vital and spiritual (Jean de La Foye).

Living beings must live in an environment where electromagnetic, chemical equilibrium and geometrically harmonious, with a tidy nature of cosmic proportions. bankruptcy of those laws of harmony of nature destroys the biotic balance of living beings, bringing hexes, forcing the agency to act defending the offending agent.

With long-term exposure to unbalancing agents, living beings tend to break its internal resistance, sick. The effect is the depolarization of the person and the change in position of the north / south axis - East / West (Eq axes and Node Life, north / south, east / west respectively) and Shin investment. Depolarization generates a change energy of the person who is Yin (-), vibrating with energy from underground.

Setting an act of defense, the disease is one warning of the presence of agents disharmonious and unbalancing the living organism.

The designations of "Electric and Magnetic", captured by the sensitivity of being human, through dowsing, are not exactly electric and magnetic origin, because They do not behave with those characteristics, developed by the electric field of science and electronics (Jean de La Foye). You can not compare the perception by humans of these abnormalities associated electromagnetic fields, with the tools being constructed by human and do not follow the same laws (of Coloumb, Gauss, etc ...). The frequency and length the human brain wave picks are often more subtle and not detectable by instruments. Humans captures the level of cellular sensitivity and devices measured in standard less subtle, and evaluation of the harmful effects devices have statistical nature. Example: world are known to a person supports "X" kilovolts / m to a high voltage minimum distance of 30 meters, etc ... The houses must be distant network 50 m high voltage 400 KW / m, etc. As with dowsing, which captures the cellular level, the effects harmful are perceived more than 150 m. It is perceived because science does not accept these results, because there is no means checked the veracity of these affirmations, not through diseases of people living prójimas those limits. Currently there are no devices capable of capturing at this level of sensitivity, too, probably, no interest economical in such research. In that sense, we introduce new terms to

It is known that the energies of different frequencies can coexist in the same space without having to produce a destructive interaction. You can see this principle in the society we live. We are constantly bombarded by television and radio waves passing through our homes and bodies. This electromagnetic energy can not be detected by our five senses, because it is in a frequency range extends the energy beyond the limits of perception of our sense organs. It occurs at connect your TV that energy normally invisible, is converted into energy ranges

frequency of visible light and audible sound, which are within the limits of our perception. When we tune the TV not see the images Channel 2 are mixed with those of 7. As energy channel frequencies are slightly different, can coexist in the same space without interfering with each other. It is only through our television sets, acting as an extension of our senses, we can even say that these energies They are present (Gerber).

So does our extrasensory perception when using dowsing as a means to attract and capture electromagnetic energy. It acts on a subtle energy level generally related to living beings. They are perceived in the etheric, astral and mental, or more there. These subtle levels of perception work in the same space-time as the other energies, however, because different frequencies, interference is caused between one and other.

The principle of Geobiology is the understanding of the waveforms. these energy biologically active and modifications that can be applied to change an environment and transform harmful in a beneficial environment they depend upon artificial interference by waves so that modify the characteristics of harmful energies present in a certain place. The changes are biological and non-physical. Physical energy still present in place, but its harmful biological effect is transformed into biological beneficial effect. marrow bioelectric energy are transformed into biomagnetic.

Earth:

The main harmful deficiencies emitted by the Earth coincides with fields electromagnetic (non-ionizing radioactivity), ionizing radioactivity and chemistry earth materials.

terrestrial electromagnetic fields

Earth behaves like a giant magnetic field that interacts with other fields emitted by the moon, the sun, the planets of the solar system, our galaxy - the Milky Way. In this sense, the Earth has a magnetic field that is changing constantly in intensity and force that interacts with the natural forces - electricity, radioactivity, solar and cosmic radiation and atmospheric phenomena and geological.

Earth behaves like a bar magnet, a magnetic dipole. Intensity This dipolar field is 60,000 nT (nT) and 30,000 nT at the poles in Ecuador. The earth It has a magnetic field whose lines intersect in the inner core and expanding force thousands of kilometers from its bark. More than 99% of the Earth's magnetic field is supposed to be produced in the planet's core, between 2,900 and 5,000 km deep, an effect called a dynamo self-sustaining (M. Good). The magnetic field observed on the surface of the Earth It occurs due to sources outside the balloon to move the electric current ionosphere, -

around 110 km height, called the magnetosphere, which form the exterior of the field geomagnetic. Magnetic changes can last from milliseconds to a few years, highly variable amplitudes. Intervene directly feature rotation periods Earth and sun. Also contribute to changes in the magnetic field on the rocks probably the earth's crust and upper mantle, in a state of fusion. Set lines of force of the magnetic field and multiple interactions combine to form the It called the magnetosphere, which is formed by the exchange of Earth's magnetic field Ionized matter of the solar wind, not to cross the lines of field strengths magnetic field surrounding the magnetic planet (M. Good).

terrestrial physical factors generating electromagnetic fields

moving groundwater and terrestrial discontinuities.

Among the physical factors causes of stress and other ailments in living the groundwater movement has an important role. The energy emitted by the Earth through the earth's crust, mostly, is balanced biotically, but the water moving underground bankruptcy causing a break that balance of forces. The same happens with fractured zones and areas with faults or breaks in the rocks. They cause changes biotically balanced energy, suffering distortions, causing harmful anomalies. as it was said, imagine how water microprisms in their movement inside the Earth. These microprisms resemble an optical prism white light strikes on one side and undergoes a refraction, issuing on the other face of the prism spectrum polarized visible light. Each color It has a waveform and a frequency. To this end, we can say that the energy from inside the earth is as white light, with Bovis: $6,500 \text{ \AA}$, and finding the microprisms moving water Undergoes refraction, reducing its strength and its subdivision into a spectrum of different energies, as we say below. Among the captured energy derived from water movement, generating harmful anomalies forming a magnetic field is observed and an electric motor. The magnetic field is measured in nanoTeslas and Electric in KiloVoltAmpere (Apparent power of a driven an alternating electric current circuit).

Water is a dipole moving in contact with crystals of rocks and soils, and It generates a magnetic field generates an electric field, graspable by geophysical instruments Spontaneous Potential and Resistivity do type. Dowsing also captures these anomalies Electromagnetic. However, the type of rock breaks, gaps fracture zones, dykes diabase, differences also emit electric and magnetic potential. With the purpose of Search groundwater grasp is useful. As we know that energy so generated forces breaks and unsanitary conditions in living beings.

It should study the place of abode, commerce or industry, avoiding such anomalies unhealthy.

Faults and fractures dry or planes formed by tectonic stresses in which He broke the current rock mass are generating energy power interruption, causing telluric harmful alterations. These structural discontinuities also generate fields electric and magnetic anomalous, causers of stress and disease in living things They live in these structures.

For measurements with geophysical apparatus (cited above) can identify the differential surface electric potential. It was an experience conducted by Engineer

German Robert Endros (M. Bueno), an experience with a block of rock. placing meters differential potential at the input and the output of slow moving water, for glass tube below the rock block, verified automatically varied the electric potential measured at the top surface of the block. And when the water was non stop difference was in the measurement. The same experiment was performed with human beings in a site with underground water movement and in a dry place, or water without displacement. Cables connected with the appliance, either side of the human body and there a potential difference of 15 mV / m electrical potential difference, while a dry, not enough to change the 2 mV / m , with some maximum of 5 mV / m , which It shows that groundwater movement changes the balance of the living cell, causing them to vibrate more intensely by the external environment, causing stress.

We can see through dowsing using a dual road. decay physical, human decreasing vibratory rate will cause the rods approximate device much to the person coming to cross. Also Equatorial Disco, Jean de La Foye, indicates strong emission in electrical phase (Bioelétrico). When placing the Dualrod a person

place, without water in motion their bars open, indicating a positive movement and showing that the person is in biotic balance, generating appropriate energy. On the disk Equatorial, the broadcast perceptible healthy places, will be in the magnetic (biomagnetic), indication of a good energy balance.

It should be clarified that these observations occur in people who are living long on these unhealthy places, otherwise no minor stop a few hours or days in these places. When leaving the place, the body reacts and recover quickly returning to normal.

Terrestrial Radioactivity:

The discovery of Wilhelm Conrad Roentgen radioactivity (1895), which defines as emission radiation is able to penetrate opaque films and impress Photographic. It was studied by Henri Becquerel in 1896, working with uranium salts, It examined the effects of radiation in the absence of light. Only the young Marie and Pierre Curie (1898), which introduced the name "radioactivity", it is possible to systematize and order cases

164

radioactive emissions. These studies allow human beings to develop a new science called geochronology, covering all research on the time scale in terms years, would apply to the evolution of the Earth and all life forms.

Radioactivity can be defined as a spontaneous emission of alpha particles or beta, electromagnetic radiation or described in terms of probability that an exhaust particulate Nuclear through the potential barrier that binds the core.

Exposed particles (alpha and beta) and electromagnetic radiations, which were subsequently characterized by many researchers as Rutherford, Bohr and Soddy, who They are responsible not only for the heat of the primordial Earth, but also the main sources heat that even today emanate from the earth's surface. In nature, all elements atomic number (Z) greater than 83 are radioactive. They are known radioactive nuclides 58 natural, which added to the artificial and produced by fission of uranium, totaling more than 1,500 radionuclides.

A Frederick Soddy (1902) expression rate of radioactive decay is due, expressed as: $\frac{dn}{dt} = -\lambda N$, where λ represents the decay constant of a radionuclide, ie, the probability that an atom disintegrates in time when N is the number of radioactive atoms present.

Radioactivity is the decay of a radionuclide and its transformation into a stable nuclide and propagates at a constant velocity. It is unalterable by any known realizable chemical or physical processes in the laboratory. When radionuclides decay original, such as uranium 238, uranium-235 and thorium-232, are converted, for example, in Radon-222 (U-238 decay), and radon 220 (disintegration Ju-232). But turn the Radonio to disintegrate generates other radionuclides generated radioactivity as polonium. The last in the decay chain becomes a stable element such as lead or thallium, becoming innocuous and non-radioactive.

These radioactive elements are found in many rocks, the minerals contained uranium or thorium decay process constantly emit radioactivity; classify them is the geochronology study in order to determine the age of ancient rocks and Geobiology the identifying deficiencies of radioactive materials, leading to the harmfulness for living beings.

The effects caused by radiation, we can cite: printing plates or photographic emulsions, the fluorescence of certain materials, such as eg .. fluorite, ionisation of gases and releasing energy through the body

To measure radioactivity, it is used as unit Bequerel meter (Bq / m³), equivalent to the disintegration of an element such as uranium in a second. That is, the As the disintegration of a Bequerel a second in a one cubic meter box. That As, indeed, it captures the presence of polonium in one place and is measurable by radiesthesically a graph of Becquerel per cubic meter. Radon gas can be captured in units called microroentgens / hour ($\mu\text{r} / \text{h}$), that is, the radioactive emission of radon gas in an hour. As example, Dr. Wust (M. Good) has made numerous measurements of radiation, called gamma rays (radon gas) from Earth. Measured in a region has developed three cancer cases, with results from 11.5 to 13.0 $\mu\text{r} / \text{h}$, while in

165

different site, decreased to 8 to 8.5 ($\mu\text{r} / \text{h}$) until no radioactivity be. Other cases cited by Mariano Bueno.

To measure radioactivity as radon gas or polonium, graphics are used dowsing with the above units and were tested in places emit these anomalies question, for comparative purposes. Graphics should be used by geobiologists dowsers who know the effects of radioactivity directly from the places where emission. You can not use a graphical measurement of radioactivity without knowing it; or the brain will not be able to distinguish it from other issued abnormalities such as groundwater moving, electric and magnetic fields. Without knowing you can not apply the technique dowsing randomly.

The radiation is emitted from areas of faults, fractures, clayey soil derived from alteration of rocks by radioactive groundwater movement, various types of rocks and soils. They have a vertical emission of radioactive ionizing energy with atmospheric effects

very destructive and harmful to the health of living organisms.

The emission of these gases in places is virtually harmless to life time. Contact the outdoor or adverse effects saturation does not occur in health beings living human. The problem is the accumulation of gases indoors in buildings apartments, garages in buildings in cellars or basements of houses. You should, before worry, see if there is radioactive emission in place, otherwise, should be concerned by other harmful electromagnetic problems.

Human Being:

Automating modern homes allowed humans acquire equipment and tools needed for your life today. Modernity is necessary developments human society. No modern material resources, such as computers, various electronic devices such as televisions, heaters, computers, X-ray used in medicine and industry, high voltage, useful for handling industries, the robotic vehicles construction machinery of pesticides to combat pest and an endless variety of machines, not the human being could explore the earth, the sea and the universe. The life of a human being grows in the knowledge of its origin, reason for their existence and understanding of the universe for the preservation of life and make every Once more efficient, freeing the limits imposed by nature, overcome.

166

Man uses electromagnetic energy, radioactivity and chemistry materials, but as we know, this also becomes harmful when it is not adequately controlled, as discussed below.

Artificial Electromagnetic Fields:

This section serves to show the harmful effects of the fields electromagnetic, benefits all know.

Airlines transmission and distribution of electricity from medium and high voltage:

(Your risk depends on the voltage and current overload they face, also it depends on the material quality, cleaning and maintenance of insulation connections to the land of the towers, the safety distance of the towers or the power grid houses in the neighborhood); with underground power lines the problem is if the lines are Overloaded, can generate a harmful electromagnetic field. It is also difficult to know where to move these electric wires and the possibility of induction with other networks lower voltage such as telephone, water, gas, etc. People may be on these lines and not perceive them; transformers, power production raise the voltage alternators - mechanical energy converted into electrical energy - high voltage transport about 400 KV. Secondary distribution plants to convert high voltage and medium voltage: about 25 kV transformers network that make the average voltage at 380 and 220 volts of use domestic and industrial. The problem is locating these plants in industrial sectors and power lines through residential areas. Should separate these towers grids about one meter per Kilovolt (1000 volts) voltage line - German recommendations - In recent studies, Parola and Markel (1994) studied Experimental on high sensitivity to electromagnetic waves induced effects low frequency (50-60 Hz) in the process of carcinogenesis in humans. Tenforde (1992) It considers that there is a first physical interaction frequency electromagnetic fields extremely low, with living systems occurring induction of electrical currents tissue. However, as Henderson (1994), it remains difficult to understand how these fields modify the electrical charges of the cell membrane, because they are too weak to

act by the same mechanisms used by high frequency electric fields. The distribution of radio antennas and television broadcasts microwaves calls, and generate strong magnetic electric fields - high frequencies and wave lengths of very small. The problems generated by microwaves refer to uncontrolled emissions inexperienced amateur radio, emitting these waves in residential areas. The emissions microwave should be fully directional, however, there is always a cone dispersion, in that case must not be in the path between the two stations; in nursing homes It should be considered electrical installations, microwave ovens, transformers Domestic electrical currents, the location of televisions and computers.

Mariano Bueno describes in detail the harmful effects of the fields electromagnetic, but what he was found in recent studies of Parola and Markel and Tenforde, already mentioned, it is the generation in the fields of high voltage, low waves 50-60 Hz frequency, for acting in resonance with the vibrations of the brain and, possibly, the body of life, modifying them.

In this regard, the observations of these frequencies can be dowsing fundamental importance for improving the living conditions of people exposed to electromagnetic fields. Therefore, the dowser can help, directly and indirectly, in the

167

scientific field for the elucidation of the mechanisms that make vulnerable living beings the effects of these electromagnetic fields. The dowsing studies should be extended all apparatus for the transmission of electric fields and perhaps radioactivity and see if emit low frequency electromagnetic waves and their effects on living beings.

Radioactivity in everyday life

Radioactivity in the workplace and home. Emission rate can radon be dangerous if the issue goes beyond the limits worldwide. this radiation Ionizing offers high frequency and wavelength very small and not visible at five senses. These particle emitting radioactive elements have a great power, capable of start electrons traversing atoms, including affecting cells human. The problem occurs in enclosed spaces without ventilation, and the presence of basements, cellars, etc. The Radonio gas dissipates quickly, with a half life of 3.8 days, the time that decomposes, and transformed into polonium, also with radiation although harmful becoming stable. The biggest problem is exposure to such radiation for ten years or more, or sleep, eight hours a day, by amending, inexorably, the body of the living being. If emissions of radioactivity are soil / rock from one place, the problem is the abnormal concentration in buildings without ventilation and in closed garages or the building has been specially built with radioactive materials.

There are many elements that can emit radioactivity in materials Issuers civil or construction sites. It is not advisable to say what types of materials, as soil or rocks which may be radioactive, and the same material as the sand used in the manufacture of concrete may be radioactive or not, it depends on the source material, etc. It should then make the measurement of materials used and sites installation housing. How? For dowsing, cheaper medium and one of the most effective and rapid method for detecting these anomalies; use the chart above Articles above. However, one must take into account an important factor: have experience capture this anomaly in previously known places a parameter set with cerebral radioactivity emitted by the vibrations. You can not use the graphical directly in places if your body known to ionizing radioactive emissions.

Chemical contamination:

Chemical contamination is analyzed broadly, mainly in the middle

atmospheric, the biosphere, the air we breathe and liquids and foods we eat day day. The main problem occurs with invisible harmful conditions, coming in the air, ingested liquids and solids, as well as those that affect our skin and internal body. The Most often we distinguish such pollution by the five senses, the obvious harmfulness a contaminated liquid, unhealthy air and spoiled foods. The body reacts by itself is the defense of the manifestations of organic rejection. Nevertheless, the most harmful chemicals health are odorless, invisible, which pollute the air, liquids and food. In this sense, pollutants can be classified into three categories Main: polluting the atmosphere, polluting waters (rivers, seas and water sources drinking) and food contaminants (HORTIFRUTIGRANJEIROS).

Air pollutants:

As we know, the main sources of air pollution are installations industrial and power plants, in addition to the automotive pollution, mainly in large cities. There is a parallel between the growth

168

industrialization, air pollution and exacerbation of respiratory diseases, asthma, allergies and lung cancers.

Thermal power plants emit sulfur dioxide and combustion residues as hollin semisolid; the oil free hydrocarbon, sulfur compounds, oxides nitrogen, mercaptans and phenolic; steel, the chemical, fertilizer and fertilizers, foundries, aluminum industries, lead, zinc, cimento, agrochemical emit extremely harmful air pollutants. The same goes for the issue of pollutants during combustion processes, depending on the type of fuel employee. Examples include emission solids, sulfur oxide and nitrogen, anhydrides, materials and organic acids. In large cities, all citizens are inexorably made, directly affecting the most vulnerable, such as children, elderly and sick people. Pollution produced by motor vehicles is the explosion one of the most recent, though considered one of the most dangerous by researchers. Maximum classified as dangerous for the emission of lead monoxide and carbon dioxide and hydrocarbon. In homes and buildings, including contaminants showed greater negative impact on health include formaldehyde, benzene and trichlorethylene.

The contaminating action of the environment and the atmosphere is extremely harmful to the sum of the different substances present in the air and the level of concentration of substances directly dependent atmospheric factors and weather, as air movement and wind, the rain, that facilitate or hinder the dispersion added with different ionizing radiation (ultraviolet, Radonio gas, etc.). Still must be added the huge amounts of tiny particles torn from the bark land by the wind, as dust, pollen and spores, disorders responsible for the sensitive or allergic people (M. Bueno).

In joining many existing harmful aspects on Earth, everyone asks: what to do? We are told that we can do nothing and is the price paid by modern civilization! It is believed that there is a great possibility of change in the habits of modern civilization and start rethink attenuating and replacing gradually contaminants by effective products, more natural and make again balanced environment. But that action must start each individual to become aware manages to convince many people. It is not yet late for a birth of a civilization back for the preservation of the environment.

The table on page 240, shows the possibility of changing family habits, which Mariano Bueno called chemical household cleaning. Many of the chemicals used in our homes they can be replaced by natural, cheap and effective products. Changing

our habits, then the chemical industry will accompany.

The same goes for air cleaning our houses, very simple: through the plants. Are our greatest allies in the purification and air cleaning, economic, aesthetic and nice. Another important aspect is the venting of areas, with air circulation permanently.

NASA researched for over twenty years (M. Bueno), the decontaminating effects and purifiers that exert some common plants indoors. Aloe Vera (Slug) eliminated in 24 hours 90% formaldehyde in a room; Daisy reduced

benzene in 80%; and lily cleaned air trichlorethylene 50%. Chemicals are absorbed by plants through micropores present in the back of the sheets. Elements subsequently metabolised by the roots and integrated into processes of food plants. Associating different plant species we can control and eliminate pollutants in our homes and work environment.

ENVIRONMENTALLY FRIENDLY HOME: CLEANING unpolluted			
PRODUCTS IN USE	COMPONENTS CHEMICALS	TOXIC EFFECTS	PRODUCTS ALTERNATIVOS
Descascantes and removers	Caustic soda (NaOH), benzene, dichloromethane, production of fosfógenos to burn	Poisoning, burns skin cancer	Grinding, polishing, blowing jet sand, carbonate sodium, ammonia
bottle opener	Caustic Soda (70%), sodium nitrite (15%), sodium chloride acids.	Burns skin, Narcotics.	Using a plunger
sanitizers health	Leached concentrated chlorine, hidrocarbonatos, formaldehyde, phenol	Germicidal decreases defenses, carcinogenic, mutagenic	Essence of cedar, cloves, cinnamon, thyme and others, vaporizer
for descaling pots, coffee, etc.	hydrochloric acid (HCl, muriatic acid), acid phosphoric, chlorinating	Danger to Children	citric acid, tartaric, vinegar
Stain remover	Tetracloreto of carbon, trichlorethylene, perchlorethylene	Poison to cells, particularly Nerve: TetR. and tri. They are carcinogenic and affect the liver	Soap. Products of fermentation Lácteas

detergents	phosphates, surfactants, bleaches and bleaching optical, enzymes and others	Eczema, conjunctivitis, allergies	Neutral soap, sodium carbonate, products of lactic fermentation, ash leached firewood (for clothing dark) phosphate 60 ° C passed
------------	--	--------------------------------------	--

Plants that purify the air			
pollutants	Sources	Health Risk	silver Purificadora
Formaldehyde	Thermal insulation, Clothes, carpets, Mobile, articles paper, Cleaners household	Headaches Eye irritation and / or pathways respiratory Asthma (exposition Prolonged) Cancer throat (rare)	Philodendron Corn plant Chrysanthemum
Benzene	Cigarette smoke gasoline Hebras synthetic Plastics inks Óleos detergents Goma	Skin irritation and eyes Headache Loss of appetite Drowsiness leukemia & diseases blood	English ivy chrysanthemum Gerbera Lily
trichlorethylene	Ink Varnishes Varnishes adhesives	Liver cancer	Gerbera Chrysanthemum Lily

The table above shows that plants can contribute to clean air of residences.

Dowsing as an effective evaluation tool, it is used in classification types of plants in relation to harmful atmospheric anomalies. It uses the handy chart Jacques La Maya, the indicator air harmfulness and subsoil. Conduct air monitoring before and then placing the plants. Check through the Bovis biometer what level of the plant preserved, nearly 7,000 health Å or more, or sick with 4,850 Å or below 6,500 Å Bovis units. If the plant walk with health, it may mean that she got transmute harmful chemicals in atmospheric air and transform them into food metabolised by

the root. Thus, we can check the veracity of the investigations conducted by the NASA and advance new research plant varieties.

Contaminating soil and water.

The study of pollutants, solid waste called, is recent reason for modern society. In all parts of the world, it is alarming the advanced nature of the contamination of soil and ground aquifers. Brazil recently was conducted a preliminary meeting on solid waste (Resid'99) and between the exponents We highlight Wanda Maria Risso researcher Günther, with the article "Environmental Health compromised by solid waste "which we quote below.

Human waste generated daily in all its activities: domiciliary, industrial, commercial and service, agricultural, sports and leisure, urban cleaning and others. He discard uncontrolled waste can have serious environmental, health problems, social and economic, jeopardizing the quality of life of the population and own survival of the planet Earth and the human race. Called waste of modernity technology, such as microcomputers housings, home appliances life Guests, plastics of all types and batteries for electric-electronic equipment, including cell phone batteries and vehicles in general, resulting from new habits prevailing in modern societies calls, characterizing a lifestyle it can hardly be maintained without unfeasible in the medium term, the existence of human life in the planet.

Environmentally, the improper disposal of waste can aggravate pollution air, the (surface and ground) water and soil. Organic waste deposited opencast suffer anaerobic decomposition, which starts when there is lack of oxygen in the mass of garbage. This decomposition gives rise to two products: the gases and decomposition of biowaste. The gases (hydrogen gas, methane, mercaptans) have odor characteristic unpleasant. Methane gas, meanwhile, is flammable, presenting the risk of fire and, even when burned, is one of the gases contributing to the greenhouse effect. Biological, liquid waste black, highly polluting, can drain surface and reach rivers or lakes, contaminating, or can infiltrate the soil and reach groundwater aquifers and contaminating groundwater. The rainwater that reach open dumps can drag contaminants and contribute to the increased volume of percolated liquids reaching surface water springs or underground. The big problem of pollution of these water reservoirs is that, Once contaminated, they are unfit for public supply. When the contamination reaches springs surface water or groundwater, by acarreamiento and the percolation of toxic compounds, can lead to the abandonment of springs of underground water, mainly due to the migration of compounds contaminated soil, as example, agrochemical contamination, for aquifers coterminous. Another case is the contamination of soils periodically is reused for planting of cultures of different plant species. The use of contaminated soil to and livestock farming, for example, can cause serious health problems as contaminants They can be absorbed by plants and animals entering the food chain. The contamination areas may also have ecological impacts. Metals, for example, also its possible effects on human health, can cause adverse impacts to the community microbial and soil fungicide.

The trash is another big problem in cities and large urban centers. In terms public health, inadequate garbage disposal leads to the emergence of so-called

disease vectors, represented by animals, contacting the trash can function as vehicles of transmission of a number of agents causes diseases to humans. The main health weight vectors are: mice, cockroaches, flies and mosquitoes. These animals are attracted by garbage due to foods that exist there. Once in the trash, they find suitable locations for housing and just they are mushrooming. As an example, one can cite the fly: each puts 120 to 150 eggs at a time, making a total of 500 to 600 eggs in four positions for his life. Eggs are laid in decaying organic substances, easily found in landfills. These insects may harbor in their bodies more than 100 species different agents causing diseases, such as bacteria, viruses and protozoa.

Another important aspect is the control of rodents, as well as representing risk health, these animals can cause harm economic order, as damnificar Sacarías food, furniture, electrical and hydraulic installations, civil constructions and others. Those Spoiled animals ten times more than they consume, reaching devastate plantations, orchards and Pomares. Rodents are vectors countless diseases through four-way transmission: urine, feces, bite or fleas that live in the body mouse. The most known diseases are transmitted by mouse: leptospirose (urine) salmoneloses (feces), and murine typhus bubonic plague (flea).

Mosquitoes biting insects humans and other animals, transmit agents etiologic (disease causers) by saliva. Dengue, malaria and filariasis are examples of mosquito-borne diseases, which are reproduced in Stagnant water tanks open pit waste are conducive to the proliferation local of these vectors, because there are various containers that can store water, as bottles, cans, used tires and other.

A common habit of the people is littering streams, slopes, lands wastelands, riba road and valley bottoms. This practice, in addition to polluting the environment, It can cause serious economic problems with clogged storm drains and bed reduction drainage of rivers, causing flooding on the occasion of the rains. He pending collapse is common when the accumulation of garbage make them unstable. In addition to everyday human activities, productive activities are great solid waste generation. hazardous waste are highlighted, those with health and environmental risks due to their toxic, flammable, corrosive components, radioactive, among others. Health facilities produce waste denominated in health services, very important in terms of public health because they contain microorganisms capable of transmitting disease.

The issue of hazardous waste exceeding addresses risk is not balanced by society. These residues can cause problems due to handling, Cargo transportation risks, rail and sea, especially when they are cleared in the environment without control.

The **environmental geochemistry** is scientific technique used to balance the effects harmful contaminants that affect the soil, air, surface water, groundwater and underground, vegetables, animals and humans. The **environmental geochemistry** studies chemical elements in the environment, which refers to excess and deficiency of these elements.

The table below lists some chemical elements that may be present in the environment, with good probability of being inserted in the food chain of organisms alive.

ELEMENT	LACK	EXCESS	SOURCE
---------	------	--------	--------

Iron	Anemia; pre-willingness to infections, apathy and fatigue	Carcinogens agent	Seafood, egg from the egg
Copper	Anemia, abnormalities skeletal lesions heart	disease Wilson; degeneration liver, kidneys and liver.	Crustaceans, Liver and chestnuts
Cobalt	Deficiency synthesis of	heart attack and polycythemia	Leafy vegetables Green
Nickel	Dermatitis	disease respiratory tract, carcinogen	Leafy vegetables Green
Manganese	deficiency vitamin K; defects in functions you reproductive	dementia Manganese (for manganese powder)	Nuts, cereals INTEGRAIS, roots, teas
Zinc	Acrodermitis, diarrhea, infections high schools, dwarfism, immaturity sexual	Problems growth and starvation	Ostra, muscles and nuts
Cadmium	-	Diseases lung, anemia and inhibits absorption calcium	Canned and Kidneys
Chrome	problems Increase, metabolic disturbances	Dermatitis and Agent carcinogenic	Beer yeast, Black pepper, and Liver
Fluorine	Dental cavities	fluorosis, Osteoporosis	Fish flour, water shallow
Lead	-	problems neurological, anemia,	Polluted air
Aluminum	-	renal dysfunction demineralization Skeletal and Evil Alzheimer	utensils aluminum antacid

Barium	-	problems lung	Barium salts
Tin	-	-	Canned food
Calcium	osteomalacia, rickets	-	Milk, meat, fish and eggs
Magnesium	ailments cardiovascular	Kidney stones	Nuts, fruits Sea Vegetables
Potassium	Cause deficiency regulation concentration plasma	-	Animal tissues and Vegetables
Sodium	I do not BALANCING water	Arterial hypertension, diabetes, problems kidney and heart	Cooking salt

Another important chemical element is highly contaminated mercury. The main gold holdings in Brazil have caused high pollution of our great rivers, the Amazon to Rio Grande do Sul, and nothing is done to contain this evil, no return or ability to restore polluted waters. The problem began to be valued when there were deaths of people in Minamata Bay in Japan affected the nervous system eating mercury-contaminated fish. Some works of environmental geochemistry demonstrate the serious situation in which we live: "Evaluation of potential risk to human health by exposure to mercury in mining areas, region Tapajos River Est. of Pará, Brazil " (Castilhos et al., 1997); "Anthropic mercury contamination in sediments background head of the Rio Dulce, MG "(Eleutério et al., 1997);" Preliminary Diagnosis environmental impacts in the watershed of Itapicuru, BA "river (Queiroz et al., 1997); "Preliminary study on mercury levels in sediments of the basin of the Red River in During the exploitation of gold mine Labra, Crixás region, GO "(Cerqueira et al., 1997); "Geochemistry mercury sediment Sepetiba bay, RJ" (Martins et al., 1997); Mercury in river sediments of the river basin Camaquã, RS \\\ "(Pestana et al., 1997). These works exemplify the seriousness of the problem in Brazil, were published in the Sixth Congress Brazilian Geochemistry - SBG - Salvador, BA - Vol. I, 1997. Hundreds of other studies show contamination of other elements such as copper, lead, chromium, zinc and other highly contaminants.

The geobiología comprises all environmental studies affecting beings alive. Countless studies and the main objective of this exhibition is the

possibility of using dowsing in detecting anomalies such harmful caused by nature and humans. Some studies in the area of fields electrical, magnetic, groundwater, radioactivity nonionizing and ionizing are already being questioned and captured by the dowsing technique. Other fields, such as those mentioned, are open experimental studies. Example study: water should be collected from a local class known polluting elements and develop studies dowsing comparing them with the scientific studies conducted by environmental geochemistry. One study invalidate the other, but can reach satisfactory results with the use of the technique dowsing and, if so, will be of great value for the very low cost and the speed results obtained. These studies can help those made by scientists and officials detection instruments also give the population, so that she can defend and avoid

contamination due to lack of knowledge. The main goal is to make people capable of learn dowsing and, by simple means, identifying harmful anomalies affecting health human, plant and animal.

Architecture, civil construction and geobiología

The rampant growth of our cities led to an overestimation of each uninhabited place. The grounds are very expensive and the free sites are found increasingly in unhealthy places, in the vicinity of the flood plains of rivers, often in near high-voltage network, and microwave transmission towers. The habitants poorest are content to live next to the trash cans and not channeled streams.

The situation of human occupation without planning principles leads to a big chaos cities. Today, millions of people live in unsanitary conditions by contracting the most varied diseases. huge sums of money from public and private health spending in character more curative than preventive. It does not analyze, present, if health problems are connected, in some way, with local labor and housing, or types of constructions of residential buildings, industries, shops and buildings in general. The main concern in buildings is its functionality, its beauty, its cost, more than just concerns because modern man seeks comfort for his fellow man. However, there are reports that there is a concern with the places where they will be built rooms.

There is no concern primarily with the harmony of the buildings with the proximity to electric and magnetic fields emitted by modern home automation, and local with groundwater movement, or fault zones and fractures. Do not analyze whether the construct is under the effect of ionizing radioactivity due to the types of rock and soil and as due to the tectonic shift, among other situations, where there was the bankruptcy of Biotic balance, causing a breakdown of compensated forces, causing damage to life planet Earth.

It must be something happening to our modern society, the contact was lost with nature, with the universe, with the harmony of well-being of living beings. No reference is made the invisible, not perceptible by the five senses such as energy, exposure to X-rays in dental offices, some apartment buildings. these clinics They are not fully protected, contamination through walls for Cimentos Neighbors who live down, up and side of office. There are still mixed buildings residential offices and clinics, not having an adequate and effective regulation.

Some basic criteria must be taken into account, as is concientice of the existence of harmful microvibratórias energies. Dowsing wave form or due to the forms, discovery Chaumery-Belizal and Jean de La Foye mainly is It makes the most powerful tool in detecting these anomalies invisible. And very important knowledge and study of dowsing techniques used by those researchers in the identification and characterization of harmful and beneficial Microvibrations issued by the Earth, the Cosmos and human civilization. Without this tool, it is not possible to identify these energies, whose modern instruments developed by the human technology, do not reach in the depth necessary to detect the curse those microvibratórias waves can cause harmful living things, mainly vegetables, vertebrate animals and humans. The ultra-sensitive instruments are not existing ACCESSIBLE for the common people, the high cost and the necessary studies for utilization.

This invisible world acts permanently, regardless of whether the human being whether or not

aware of their existence.

Factors to be taken into account in the acquisition of land in the construction of a room and environment composing the biosphere:

The dwelling place (healthy place without the presence of terrestrial origin - of tectonic fault zones related fractures, types of soil and rock stations Ionizing radioactivity groundwater in the subsoil; air source - near the high voltage networks, microwave antennas, Centrais of electrical distribution, etc);

L to architecture (the shape of the building, the roofing, the spatial arrangement, etc);

civil construction (electrical, hydraulic, material types, inks, heating, air circulation, stationary relative arrangement of the north magnetic sleeping position relative to the bathrooms, etc).

In this part, we will give greater emphasis to the architecture in which it refers to the shape of the construction, analyzing insalubridades constructions caused by incompatible with harmony of nature, cosmos, of living beings in general and especially to be human. Aspects of the subsoil, the environment and the cosmos were already being studied in previous chapters.

Significantly, this analysis is not intended to judge the styles architectural, creative forms developed by architects how to practicality, beauty, comfort and other items needed. The chapter in question is the main purpose of investigate harmful energies emitted by anomalies due to the forms, disharmonious, which cause harm to living beings. These anomalies can be issued for details on the construction machines like walls, roof types, disposition of the various blocks the building, finally a preoccupation with architectural geometry.

architectural geometry:

We do not want the time, but we would like to highlight the infinite cosmic harmony old buildings: the Babylonian, pharaonic, the great churches of medieval Europe; Middle East - the mosques, India - the Taj Mahal: Americas - the civilization of the

Mayas, Aztecs and many other countless creations of the ancient world - because without the Careful observation of these constructions, we have no parameters for comparison. The modernity, the result of the creative spirit of man, set new paradigms for architecture with strong commitments to practicality, economy, speed in constructions because of rampant population growth, cost of labor and countless other reasons.

As Jean de La Foye waves of death says in his book Waves of Life on architecture and waveforms: " *A monument, a building and even a small building should not only be beautiful, but integrated into the natural rhythms as does a tree in the middle of the floresta. Equivalent to say that the architect's imagination must adapt to certain laws. Of other so, he risks playing out soil property harmful waves to human health people who live or the environment ... The plans of an architect is surely more Important health, prevention of cancer and other diseases, which the astronomical sums devoted to medical research and care of the sick, without that is added to the price of financing a property .. And this is not simply a simple intellectual creation of an artist, still obeying solidity, aesthetic balance and comfort apparent. She is, still, subordination to an order. That order, we want clear and bright - the builders of the Middle Ages seem to have possessed during that fugitive apex our civilization - is rapidly diluted in specialized recipes, disappearing in the era*

Is it possible to rediscover that order?

Addressing the problem it is facilitated by the waves shape and form fields. For in Basically, the criterion will be the integration field and with what it takes: Harmony with natural forms and the beneficial effect on living beings. "

Some famous examples of serious errors, cited by Jean de La Foye illustrate their statements:

Case 1 . In a city west

France was built a building large size, with ten floors. The shape pyramidal assembly is crowned by a roof whose inclination is inverted (the lower part is in the medium) and whose emission wave form is multiplied by species inclined needles on each floor. That investment causes a powerful V-Power in the vertical ...

Case 2 . In a neighborhood

the entirely new Paris region, it was built a municipality whose plants extend below up ,, as a

inverted pyramid. The rationale for this was reasonable: on each floor, crossing the width Low floor, would be allowed to enter the sun in the winter, while still low in the sky, and would provide shade in the summer when the sun is high. The problem is that the forms resting on the ground and above are higher than under appeal create extremely powerful V- Electric, helped by the acquisition binary UV Electric on the terrace higher. That V-Power is accompanied by an impressive array of investments, including hence the red and violet of Ecuador Chaumery-De Belizal. And JG Bardet's comments in his Book *Mystique et Magies*, on the same building, quoted by La Foye "... *inside begets claustrophobia, stress, nervous fatigue. In less than a year, nervous depressions multiplied and - how to own mayor, installed on the top floor of the property - he He declared to feel dizzy unwilling to work ...* "

Case 3. Some time, scattered haphazardly on the streets and new neighborhoods ago observed a pattern that differentiates the facades of individual houses. Instead of continuing the facade masonry until the top of the roof without interruption, the period vertical space between the apex and the base of the triangle is constituted of a covered maderamiento slate: A triangle stands superimposing a rectangle. That difference is generating V-Power within the house, adding to its harmfulness of concrete frames armed. It is verified that roof constructions invested they are generating harmful anomalies and roofs

forming a triangle (one prism) isolated on a rectangle (parallelepiped) also it generates anomalies harmful. It follows that there Anomalous infinite and situations the same quantity of beneficial situations. It is suggested the architects who created an architectural project to build a model and the use of dowsing instruments such as the universal pendulum Chaumery-Belizal, the Escargot-Selector or Equatorial Disc Jean de La Foye, identify harmful anomalies before initiating itself (further details on the use of such construction instruments will be in the book The graphics in dowsing). Another suggestion is the case study: take existing buildings and measure those premises and learn to identify the harmful anomalies.

It is noted that there is a predetermined formula to properly constructed; space objects are different, not being, for example, two identical buildings. Yet being constructed with the same architecture, it verified that have distinguished anomalies, because the influence of place where it was installed construction is different relative to one other; should observe each independently. In space, three-dimensional world, no repetition of anomalies, ie, the study of the spatial world no experience acquired theoretically, it is necessary to direct study in local and each case is a case, you must It is treated as unique.

180

The real solution is to apply the concepts of geometry of cosmic proportions, known as sacred geometry, attributed to old churches (eg .: Chartres Cathedral France) are constructed in this way, taking into account the harmony of nature. The constructions must be in harmony as living organisms; You can not conceive of one project without there is an interaction between all parties, you can not change the style of a window after the project ready, you have, in this case, to change the whole project; the same occurs with a living being, you can not place a monkey liver in a human being and vice versa. Harmonious projects in no last minute adjustments are created based solely on practicality. As is common today, by the computer, you can stretch or shorten a tree without concern that completely alter the original tree structure, causing disharmony our "eyes" of perception, but our five senses is not unnoted that. Our perception is extremely rigorous in observing the invisible, accepting any alteration of the original harmonious way.

Feng shui

The ancient Chinese already knew the power grid of the Earth by means of Feng Shui, technique that requires knowledge of dowsing, astrology and Geobiology and wrongly Call western geomancy. The geopotential points and lines of the network were called by the ancient Chinese sages respectively "exit doors Dragon" and "Veins of the dragon". The Chinese have a much more holistic view of our Western geobiological phenomenon and how to manage it. They call all the energy of Chi. Exists then good and bad Chi. To ward off the bad Chi wind bells are placed around the home and in front of windows and doors; lamps on at night on the outside; at the entrance, right outside the door, a strongly colored dragon is responsible for ward off bad energy. Mirrors should be placed on the wall in front of the door of the rooms. The bed in the bedroom should never be opposite to the door; from preferably on the side wall, hidden. The north side of the house is reserved for the room work - office. According to Feng Shui, the North is the direction leading businesses. The East

the house will be reserved for the TV room. East is the direction of harmonious life family.

Before building the house, features Yin and Yang of the land is checked. If the house significantly affect the topology list, corrections were made, such as lifting or lower adjacent walls, planting bamboos in the back of the house, the watercourse was diverted to be more winding, etc.

Unhappily the Cultural Revolution promoted by Mao Tse Tung annihilate traditions Chinese and today, it is easier to find a Lohan (Feng Shui compass) for sale in Taiwan in China and perhaps only in a few places inside the figure of the wise subsists in Feng Shui raising dragon veins Balontre a fist.

Hartmann Networks.

Telluric energy is generated in the center of the Earth and emitted perpendicularly the surface. Many dowzers investigated how this energy escapes from the bark Earth and they found that it forms a true mesh with vertical walls and perpendicular. Dr. Ernst Hartmann, German physician and dowser, was who else deeply he studied the matter, between 1951 and 1961, hence the main energy mesh Earth be known today as Hartmann network. This network is rectangular and measures about two

181

meters in north-south direction and 2.5 meters in the east-west direction. The walls of this network They have an average of 21 cm thick and can reach 80 cm during full moon. further of lunar effects, vertical stripes Hartmann network suffer the influences of seismic and nuclear tests movements. Recent research seems to prove that the H network only exists up to 2,000 meters. On the other hand, from this altitude, another network It seems to exist in positive and negative plates. It is interesting that Russian satellites They checked by infrared photographs, the existence of a huge icosahedral mesh enveloping the Earth.

Just by way of information, we will discuss other meshes. Dr. Peyré mesh. Their study was conducted in the period of the last war, it consists of a quadrilateral mesh oriented north-south, forming about one square with seven to eight meters side. Its stripes have a width of 20 to 30 cm and have harmonics, these harmonics appear to be the Hartmann network known today.

Dr. Curry, West Germany, made its discovery more or less at the same time Dr. Hartmann. This network is once a quadrilateral whose bands have more or 40 less cm thick. Its orientation is diagonally in relation to North-South axis, tilt approximately 45 °. The walls of the mesh have varying distances periodic measuring 4 to 16 meters, sometimes more, sometimes less. His inclination is also variable. Currently it is called diagonal mesh network and Hartmann, overall mesh.

Lucien Romani physical outlined in his general theory, the nature of mathematical laws concerning the distribution of geomagnetic meshes and a number of checks performed experimental. As a result, he said, the actual mesh strips corresponds to 1.10 to 1.5m away. Registration is here.

Matings of when transmitters H network (network Hartmann) of some energy harmful, they are called "geopatogénicos points" for range and Vy emit rays. These points They can still emit V + and, Red + e, beta rays and alpha rays. When a person is on those points for a long time (sleeping, working, studying or leisure), she can develop countless diseases, mainly cancer. Of course not all points crossing mesh Hartmann are geopatogénicos. If so, the Earth's soil would be a immense natural trap that inevitably lead all living beings to a sad end.

"Houses that Matan" and some other publications released in its glue, created between "Credulous-fearful-esoteric" phobia of harmful telluric energy. They come, since then, proliferating in recent years the most diverse residences environmental rebalancing, intended to subtract from its inhabitants from harmful energies. We will place the points the record straight.

This because, let's clarify; without the slightest doubt, there is the possibility that inhabited places for us to exercise a pernicious influence on our balance biological, with the consequence "eventually" the manifestation of some kind of pathology.

Fear of the unknown, allied with the esoteric fashion in vogue for some time, has led the fearful calling the contest a "specialist", usually a practical dowsing to make an assessment in the workplace and more commonly in residences. He has been with correct melancholy that we have always seen the same situation:

182

dowser always find one or more points of imbalance on the bed, either that is the size of the residence. It will be so, there and in China !!

Once I was called to do an analysis at a residence in a neighborhood "Class A" San Paulo, resident's complaint was: had no sleep for some time, He slept for short periods morning and woke up feeling "that he had been run "parallel professional life had entered frank decay,

Before me, they had already gone through the house several dowsers; invariably all They had found problems in the bedroom and more precisely on the bed. The total area the house is 700 or 800 square meters, most rooms were decorated with heavy furniture and dark, heavy curtains pictures, had some air pollution from decoration and pessimistic atmosphere of the inhabitants, and still nothing serious. The kitchen also had some air pollution caused by household, more exactly the refrigerator and freezer, still tolerable, which easily verifiable by the good mood of the two employees present on the site. Finally, we reached the bedroom. For me telluric no surprise order imbalance was present. In the closet, which he sometimes Hall bath had a green negative index higher than normal, as a result of be a closed room, nothing good ventilation could not eliminate. Back to e bedroom. By the time I went drop the compass on the bed, I checked with a surprise Total rotation of the needle thereof. indeed rather normal thing when you have a mattress magnetic tremendous causer of sleep problems. All my dowsers ancestors had detected a type of disturbance on the bed, everyone had evaluated only energy present, first use proper materials research, second by incorrect assessment based on misconceptions. For complete ignorance of the it calls harmful energies, telluric expression (tellus = earth) became synonymous with ruin place of nefarious energy. Terrestrial soil as a whole is a balanced, healthy and good place to live. Eventually, for the reasons given above, that will emerge disturbances may occur a harmful wave. We can see that walking or flying over symmetrical plantations How, for example, oranges, the same in closed condominiums built in places kills and divided by hedgerows. We will find here and there a fence yellower and whose twisted wedges seem to want to flee the place where the roots are. In an article published in 1975 in the French magazine Radiesthésie Magazine "entitled The waves called" Noxious " Often have a Therapeutic Quality, Michel Grenier author defends the thesis title, stating that a person weakened by some kind of disease will surely be affected by some kind of "harmful wave" however, in an individual in good physical condition, its faculty adaptation by half will play favorably, and a phenomenon of self defense, body will react against this form of aggression and will become stronger.

Lines H network, in both directions, are in turn often positively charged and negatively charged. This being so, the geopatogénicos points may be three types: positive (+ with +), negative (- to -) and bipolar (+ to -). Exposure to these points generates the so-called "geopathic stress" which weakens the body and promotes processes pathological. The physiological effects of stress Geopathic include, among others, the following:

- a) changes polarity of the cell membrane, generating anomalous ionizations;
- b) altering the proton resonance protein molecules;

183

- c) anomalies connections hydrogen;
- d) abnormalities of basal regulation mesenchymal tissue;
- e) hormonal imbalances;
- f) forwarding pH values;
- g) promoting vegetative anomalies;
- h) alteration of the oscillation of the spine.

Depending on the polarity of geopatogénico point, the manifestations of stress Geopathic be different. Here are some of those demonstrations.

1. Stress Negative (Yin)

In this case, the negative field extracts energy from the body, causing disorders hipoenergéticas and predisposing degenerative and malignancies. As an example We have chronic fatigue, arthritis, hypotension, scleroderma, multiple esclerose cancer. IS frequent spin reversal of protein molecules.

2. Stress Positive (Yang)

In this case, the positive field leads to excess energy, generating disorders hiperenergéticas such as hypertension, migraine, stroke, myocardial infarction, psychosis. There is, still, the predisposition to alcoholism and, in children, epileptiform attacks.

3. Stress Joint (Yin-Yang)

In this case, the pathological manifestations are mixed due to the bipolar nature of geopatogénico point. The most frequent alterations are those related to the polarity predominant.

Not all people exposed to these harmful points of the H network present diseases. The conditions of the geopatogenicidad factors include, among others, the following:

- a) degree of biological resistance;
- b) degree of psychological resistance;
- c) of life (misfeeds, use of snuff, alcohol and / or drugs, drug) intoxication;
- d) environmental electromagnetic pollution;

e) form waves harmful environmental;
f) enabling factors of geopatogênicos points: water veins, crossing underground rivers, geological fissures, underground cavities (caves, galleries, pipelines, wells, etc.), metalliferous veins, rupture in the composition of the subsoil (py: forming sand argila a dry fault) coincides with a cross network Curry, existence material radioactive (including Radonio gas).

It will telluric energies emerge only by natural causes? Of course not! Human beings, covering every piece of vague terrain with many different types of constructions has contributed well to that. Take a vague, secluded grounds, we will open a first hole, big, very big (pool for children), as the terrain is in slight decline, make a second hole (games room, pool baths, etc.). Some stakes well entrenched in the earth, an iron grille covering the entire area of construction and, above cement, concrete enough. We just created the foundations of a house and a acupuncture Conversely, an imbalance in the local. Our foundation deeply nailed on the ground they will emerge from the telluric energy vibration. The rest you know.

We talked a lot about the problems. At this point the reader should be wondering what to do to improve their quality of life or prevented in the case of starting a building. Most publications versando on geobiología case concerns the dowsing as a means of detection, but does not give the slightest indication of how. A clear example is the last book of Good Mariano conceptuado, where the major focus is to Electronic devices. GEA bulletin number 20, in an article authored by Raul de la Rosa, begins: "Dowsing has been, up to date, the largest forgotten among the topics appeared in our newsletter. "The book of our authorship, graphics Dowsing, It has a special notebook graphics for the practice of Geobiology. We believe that we are contributing to the insertion of dowsing as an effective tool in the geobiología.

Geobiology projects:

This is surely the ideal situation for the application of the principles of geobiología, go to see the terrain, observe the local vegetation and topology. Once the field Flattened clean and inequalities, make a survey of the mesh Hartmann, note the results on the plane, if necessary cuadricle the same 2x2 cm and measure the index Biometric each crossing.

When designing a building, try placing all pipes on the outside in a lateral corridor for example. The electrical system is a difficult problem, one possibility is the crossing wires within the same room (opposite electric fields cancel). The meter and circuit breakers must be installed compulsorily on a neutral area

all take, refrigerator, electric cookers, shower, microwave, computer, etc., always grounded.

Do not make the bedroom over the garage area, the major metallic mass of the car deforms the vibratory field.

Avoid installing the antenna TELE and other vertically bedroom or office.

In the project, favors natural lighting factor according to the seasons.

The best combination of roofing materials, watching high frequency absorption electromagnetic, thermal insulation, etc. It is wooden structure coated film aluminum on which they are finally placed clay tiles.

Preferably, the upholstery of natural fibers, synthetic promote increased static electricity.

It is not advisable to use electronic devices in the bedroom, especially TVs and radios clocks. A simple clock counter liquid crystal, when is on a harmful geomagnetic crossing a powerful emitter is made.

Bedroom sets, where the head of the bed is inserted into the space surrounding cabinet, Vy emitters in vacuum cabinet that is on the head of user. If possible, align the bed on the north-south axis, the dream will be quieter.

For logical and aesthetic reasons the microwave has a guaranteed place in the modern kitchens, should be moved to the service area, or other less frequented and more ventilated. Open the oven door, place food inside and stay away from him. as I said a few times in this book, some people are extremely resistant to type of aggression, and other ...

Avoid metal furniture when located in areas of imbalance can act as antennas, increasing environmental harmful phenomena.

The metal rod for grounding should only be introduced in a neutral area of the mesh geomagnetic.

Corrections and Neutralization:

The best field of work is in homes built with space on the back, there is always possible to apply any solution or package. A correction work environmental by geobiología is slow and demand analysis also sometimes new interventions to completely heal the problem.

Apartments, corrections, most of the time, limited to arrangements internal (good field for application of Feng Shui), if the disturbance is of telluric origin, no quite what to do, it is not possible to promote structural changes in the building. I searched learn about health and emotional neighbors above and below in the same alignment of your apartment. In the case of finding problems, change apartment! It will be less painful and also the cheapest solution.

Thanks to a discovery Engineer
French Louis Turenne, published in 1959, is
decrease or even eliminate the effects
harmful electrical power, engine
electrical and other devices with the use of
545 numbers, with the last five drawn
invested.

The method is similar to Busby. On a piece of paper 15 x 15 cm, three design
and circles inside the number 545, this graph settles a small molder
(Vacuum) of at least 5 cm in diameter, face down. Rate the vessel according to the Busby method.

Place the set on the devices to neutralize. Use one of the light meter
at the entrance of the residence.

Computers:

Recent years, technological developments had a positive effect for computers
radiation emit less and less, we can say that electromagnetic vibrations
produced by the CPU and the shielding resulting from the metal case are "acceptable". With respect to
Choose a monitor ... "Low Radiation", work 60 cm fabric for maximum periods four
hours with intervals of ten minutes every hour.

Two neutralization systems experience:

The sphere with 21 points.

On a sphere of any material insert 21 points (brads, sticks, etc.)
randomly. The amount of points have to be exact. Place on or near the
display.

Comb:

Place on top of the monitor, about 10 cm from the end of the apparatus, a comb
those plastic good cheap teeth Dumps up, it is an efficient disperser
waves generated at that location, and cheap. The trick also applies to devices TELES.

Mount a personal list of possible techniques for correction or rebalance, do it in
descending order of the physical technique for subtler (magic, esoteric) technique. The techniques
Physical are longer, stability, ease of control, unlike the "magic"
essentially depend on the psyche operator and it remain connected by a
undefined time.

Do not insert randomly dowsing graphics on your residence, in the expectation
promote rebalancing without having been made a place analysis. Sometimes the spell turns
against the sorcerer. Introducing a wave emitting object shape in an environment
balance can result in an imbalance.

Abuse protection means

In 1961, the brothers Servranx, in an article published in the April EXDOCIN, They are commenting on the fact that we found environments heavily imbalanced by the multiplicity of protective devices or rebalancing Today .. From there the only thing He worsened, proportional to the number of "specialists" in the middle.

Most instruments to rebalance saturate, places they should be placed are never respected, who will want a type escargot placed reequilibrador on the floor of the room, facing the door? And he is forced to divert all the time you have to pass, over which obviously will be exchanged by two useless graphics self-adhesive, 6cm diameter, pasted on a wall three or four meters away. All this ministered by a "Specialist" who never heard of formología, timely intervention point of shunt shield, resistivity, static, spectrum waveforms, ionization rate harmfulness required, disaggregation of paint particles, etc.

The Curious Case Atlante ring:

This small stoneware ring was brought Aswan for France, around 1860, by the Marquis de Agrain, grandfather's wife André de Belizal, one of the most French renowned and brilliant, brilliant dowsers creator of all concepts used in dowsing today wave form.

For years, A. de Belizal used the then Luxor to create form called dowsing devices wave form, in order to rebalance environments. For that reproduced the drawing ring in three dimensions found that as ring means in the round shape, this is not He saturated with vibrations present, but, once flattened lost this property. only Later in collaboration with PA Morei were added two external ways to triangles Isosceles that allowed the stabilization of the device. It exists in Belgium with a compensator Luxor form (Atlas) also based on the concepts of Jean de La Foye, containing holes and additional slots in order to bring out the Shin shape.

reference to the number of fatalities that followed the rape of Tutankhamen's tomb, Roger de Lafforest received a letter from A. de Belizal in which he knows the secret was said Howard Carter's immunity in relation to the "curse of the pharaoh." According to it, the "Miracle" was in a small Egyptian ring. Photo of it became part of the second edition of houses Matan. Unfortunately the Brazilian edition was deprived of the precious photo, by total ignorance of the meaning of it by the publisher.

In a paper published later Lafforest regrets that \\ "Mercadores without scruples \\ "could not resist the temptation to make easy money and reproduced only ring from the observation published or an appearance at the French TELE picture. Those counterfeits, mostly esoteric bugigangas not pass without the smallest application rebalancing disharmonious waves.

Unfortunately the Brazilian case is a bit more serious. A father committed the sin of folly and had the fickleness of creating "their Atlantean ring", little knowing that it is Harmony the forms and the most technical concepts of dowsing, created more esoteric badulaque, that the "knowledgeable" advise to use in a given finger and hand as the end in view. Finally...

Luxor (Atlas) generates ring through its shape capable wave create a shield Invisible against certain types of external "aggression" with greater or smaller success can interact positively in cases of harmful vibration environment. Obviously it is not a panacea.

The geobiología other issue is extensive so we can make an exhibition Comprehensive on it within the space of this book; We would however like to reiterate our view of the practice of geobiología as the use of dowsing and eventual correction of the anomalies found when survey using all methods available and not just the dowsing.

Minimum material for the practice of Geobiology:

- Bovis biometer
- Pendulums polarity
- Compass
- Dual-rod
- Wolf-antenna
- Equatorial Péndulo
- rule geobiología
- Set of graphics for Geobiology
- Site plans
- Instrumental correction.

MARCOS ALVES DE ALMEIDA

Scientific training

- Bachelor of Geology - Geosciences Institute - USP - 1969 -Ago / 1973.
- Full Degree in Geosciences - Faculty of Education -USP- 1975/1977.
- Master in Geology - \\ "Geology of the Agua Clara Formation in the region Araçatba - SP \\ "- Geosciences Institute - USP - 1990.
- PhD in Geology - \\ "Evolution tectono-settle in the Itaiacoca Group Engineer region Maia and Ribeirão White - SP \\ "- Geosciences Institute - USP - Qualifying examination approved 3/23/2000 (underway - term in 2000).
- Dowsing - various basic and advanced research and self-taught courses - from nineteen ninety five.
- Geobiology - autodidact.

- Radionics - autodidact.

Professional activity

Geologist Holderbank Group (CCI - Cia de Cimento Ipanema -CIMINAS -. Cimento National Mine) - 1973-1976 - Pernambuco, Ceará, Piauí, Minas Gerais, Rio de Janeiro, São Paulo. Technological Research Institute Est de S. Paulo. - IPT

Technological Research Institute of S. Paulo Est. - -Agrupación of IPT
General Geology - 1976-1996 - São Paulo, Mato Grosso do Sul, Parana, Rio de Janeiro, Minas General, Goiás, Ceará, Piauí.

Faculty of Industrial Engineering - FEI - Depto. Assistant Professor II metallurgy - from 1988 - Materials: ML - 512 - Mineralogy, rocks and General Geology, ML-613 - Treatment Minerals / Minerals Microscopy.

Published works: 30 works in Congresses and Scientific Journals (author and co-author).

Dowsing - in the investigation of groundwater in crystalline rocks and local unhealthy (Geobiology) .Empresas investigated for groundwater (as Hidrogesp consultant): Ford, Mercedes Benz, Otto Baumgart, Elma Chips, Bayer (RJ), Cisper, Shopping Center Norte, Natura, Avon, Hospital São Camilo Hospital Neomater, Hotel Eldorado (Atibaia), Nadir Figueiredo and other companies.

Work in the area of unhealthiness: hundreds of homes, apartments, buildings, factories, shops, country houses, farms, ranches.

Brazilian Association of Dowsing - founder of the Abrad partner.

193

Antonio Rodrigues

Advertising, writer and editor, researcher dowsing and radionics, is dictating dowsing courses since 1988. In the 90s, through the company Mindtron, developed and produced radionics, equipment compatible with main existing outside lines.
