PRELIMINARY NOTE

Materials that have helped us to complete this work comes, for the most part, our book published in 1939 under the title "

Experimental Physics Treaty Dowsing

" and exhausted for quite some time. many dowsers we asked reprinting. We took advantage of this re-edition to rejuvenate our work, give it a more inviting title and get benefit from our latest research, especially in the medical section and vibration harmful. We deliver to the reader as it is and our goal will be achieved if, after turning the last page, it became for us a friend and collaborator. Only indeed by a constant exchange of ideas and a fair understanding of the "Dowsing is "our art can one day hope to get out of the terrible evil of growth where it debate for many years already. Uniting should not be a single name, a single method, but the TRUTH, the mutual disinterestedness, and also a deep faith a cause that is very dear to us all: gradually transforming our art together, hand in hand, in an exact science, magnificent conquest of man over the forces Invisible.

WARNING

Before writing this book we have long hesitated. The fact is that dowsing is currently shared between two tendencies, one who proceeds from the mental, the other seeking to rely on the principles of Physical with which, in fact, it resembles. Moreover, to add to the general confusion, these two tendencies, which at first first seem rivalry, however have a common point where they meet: processing and amplification of the radiation through the human body through the vital fluid, and whose mechanism is translated for the time least, by the movement of a sensor (pendulum or wand) movement whose meaning interpretation can give the problem an exact solution or false. Both theories, mental and physical, provide positive results that can, to a some extent, be considered equivalent, but personally we believe that the true dowser's interest to move in this last way that it will benefit from discoveries of recent physics that will allow it to move more surely his art of level a . Scientific Dowsing is more than ever on the agenda, and its many applications, it seems to produce miracles modest amateurs, we do not claim to lead to such results or throw the bases here absolute a rigid method and without errors. The ultimate success will not, however, as in so many other areas, the work of one mind, but of a community. We only want to bring in the limited extent of our ability, a stone building common, it will be our contribution to the science of waves that has captivated us since the beginning of our research. We found one day in the presence of a phenomenon which seems to have hitherto escaped the curiosity of dowsers (we have at least the presumption, since no item currently published only addresses this important topic), namely the decomposition of a spectrum a sphere. This study, still incomplete, put us on a path that we believe unexplored, whose starting point was the earth electromagnetism related to the cosmic energy, these unsuspected strengths that will allow real but tomorrow the most surprising discoveries . This electromagnetism, we sense are in the sphere intersection and transmission center of all vibrations. We found that last Celtic being traversed by a magnetic current natural through its poles, it occurs in the center of figure, in the order of visible and invisible radiation, a decomposition similar wave length to those a light spectrum, and -rays these colors are distributed over the spherical surface in points equidistant rigorously. These radiations are identical to the phenomenon observed in the decomposition of a ray of light through a prism white crystal, it was obvious to us that we were in the presence of the full range of wavelengths, from the longest: the infra-black, until the shortest we have since named "green negative. " Hang these different wavelengths and ensnare our dowsing works lengths, as was the goal of our efforts, o ù is born "Universal Pendulum "and our theory of the "decomposition of the spectrum in the sphere."

Of course, the surprises were numerous moments of discouragement as we are often found to incomprehensible phenomena that we had not foreseen. All this due to various causes, a technical wrong not yet developed, to contribution wave parasites, etc ... More than two hundred detectors were established by us and all these tests we draw conclusions and methods we hinted of new horizons. then continuing the study of the sphere, we had the idea to join some by juxtaposing by their poles contrary; this we allowed to discover the " Pile Dowsing " whose "tension "is the number of elements and the" intensity "that Miss diameters employees. Thus we obtain, as in the electric battery "voltage" and "amperage", and the ray emanating from each pole is always green spectrum on the one hand, and its opposite or "negative green ", secondly We demand absolute authorship of this "Pile Dowsing", both in terms of its discovery, its properties, its applications. She the rest Indeed, as that " Pendulum Universal ", the subject of a patent dated 10 April 1936 and bearing the number 816132. This stack we gave the most remarkable results both in terms mummification of meat, fish, eggs, plants that radius as healer in cancerous affections. Our universal clock was not only receiver, he was also transmitter, that is to say, granted by a color spectrum it possible to produce this wave when the AW-IPM was voluntarily. And this vibration is electromagnetic order whose blood is brought to the number 100, by inserting at the center of a detector cell 4 elements. Thus dowsing battery took birth as the experience proved that a disk of metal or wood, little significant material could receive and keep impregnation balanced for vibration then return as a waveform or otherwise healing wave that can be applied on a control disease. The possibilities of dowsing accumulator not limited there and we see that through it, it is easy to carry waves, to soak away a diseased organ, and finally establish a true relay by which people even ignorant of dowsing, may, with a plan to capture the vibration and sent to take the place of her choice (her bed, for example), and that through another battery , free of any charge, which automatically imbue the transmitted wave, and leave as easily to take a new, whenever the battery distributor change its wavelength. Since we had a calibrated detector, we could study the vibrations emitted by certain signs or statues such as those of Egypt and Easter Island. spherical pendulum used as a receiver, and those derived allowed us to inventory these waveforms and draw walking their rays, bring out the harmfulness at certain points or in certain directions. All this can not be treated in fantasy, we have demonstrated, either by mummification meat under the sole influence of the radiation emerging from these forms or by feeling fatigued guage clearly perceived by humans. Reversibility of our detector has led us to believe that dowsing is not only an opportunity to feel, it would also be an opportunity to give, and always, in one case as in the other, the human body is the necessary intermediary acting through a kind of mysterious robot whose mechanism still remain to be found. Later we will see that in ancient times we attribute the power of the waves to the mass of devices or forms produced them. This massive form was the only way the ancients had at their disposal, safe way indeterminate time in connection with the devices that will bring about.

But he would not otherwise less bulky, and just as active, producing energy dowsing? Here we mean the dynamics dowsing, that the thrust movement at some point, it would be capable of producing much higher than the mass media effects, we found that devices established for a calculated radius, gave the state movement (like totton) the same radiator lions, but with considerably intensity increased. The wave speed boost at some point could it not produce the disintegration of matter in a naturally very small field? Saw Reese whose circumference is smooth against ordinary saws, used to cut metals without touching: the room to charge ahead regularly using a carriage screw without direct contact with the saw, metal background throwing sparks and, curiously, the metal casting grave without high temperature since it can be collect in hand. The explanations given by the manufacturers and ignore the decay, seem not veryconvincing . diameter of this saw is 1 066 meters, it operates at 2,300 t / m and its tangential speed at this rate of speed is 7,700 m / min. We believe that many other phenomena find their explanation later the dowsing, but the most exciting solution is the discovery of the pendulum fully automatic. In our opinion the universal spherical pendulum is most likely to achieve this goal. discovery would be worth asthe same time the engine Dowsing would arise , as the ancient magneto was the ancestor of electric motors and generators monstrous that have revolutionized our industry. But this is again an anticipation and, if it is feasible, it will take many tests andwork beyond our current capabilities. Here, almost in its entirety, the content of what the reader will find in this book, in the form of studies, unfortunately still incomplete, but we will continue with tenacity, happy to receive the assistance or critical skills most authoritative, in a new way of dowsing where we want to be as pioneers.

The law of similar. Stick command. – The spell.

Dowsing has already caused so much patient research, many important works, which took last few years an important place in modern life, is not, as some spirits might suppose, a "novelty" of our century, brilliant invention output of the human brain post-war, word, of course, is new, but it hides a science as old as the world, at least the world inhabited by intelligent beings a science governed by laws which men surprised the secrets from the most remote antiquity. How are they able to discover these mysterious forces and to use them for the purpose hunting, or to gratify their revenge, while had such a small civilization, having for all weapons that their flints and Herculean strength? This question will undoubtedly always been well. However, we find that at the bottom of caves and cave walls once occupied by our ancestors, the traces of this nascent dowsing. Bold explorers, as Norbert Casteret found, roughly carved into the caves of the Pyrenean basement, evidence of this black magic that allowed hunters from prehistoric times to paralyze the first game in order to capture more then easily

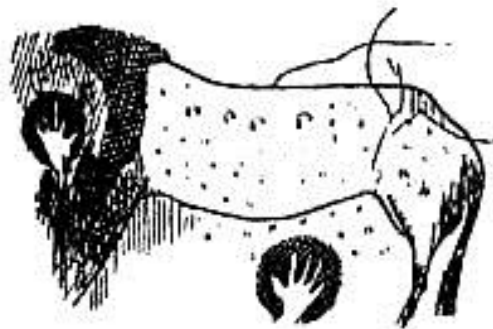

FIGURE 1.
Envoûtement préhistorique par action de la main.

To achieve this goal, they drew on the walls of their underground dwellings in the form of the coveted animal and previously spotted one of their hunts and a stylized hand, placed usually on the side of the beast, marked the will and the power of man over his victim (Figure 1). Below the rest writes about Norbert Casteret in "Ten Years Underground"

" The Aurignacian and Magdalenians mainly hunters, seeking promote the success of their hunts by precede ceremonies whose meaning we appears better as prehistoric discoveries are made. They represented the animals they wanted to kill, and in spellbinding magic sessions, traced the

VIBRATION TEST DOWSING

L. Chaumery - A. OF Belizal

injuries in these drawings, thus killing the animal effigy, to ensure the day of the hunt, the actual capture of the beast préalable men bewitched t (Figure 2). This explains the signs, holes, arrows, axes, clubs who are on many drawings of animals. Sometimes the intention of the primitive hunter is even more explicit, the animal is depicted falling into a trap in a net, succumbing to a stoning. This theory seems especially considering the incontestable as lions and bears cave Montespan who are riddled with shots spears and arrows, worn with precision in vital parts and with such violence and to acharnement that sometimes the statues have collapsed. "

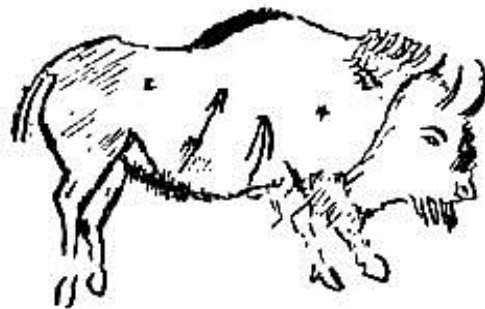

FIGURE 2.
Envoûtement préhistorique au moyen de coups d'épieu.

Obviously prehistoric therefore knew the spell, which is a form of read power of waves. But in fact this mysterious power, torn; she operates? We are almost certain it is the play of CW, by law, that we are going to explain briefly. We recognize that every body radiates, vibrates and emits waves, not to fall directly under our senses, can not be denied so far. These infinitely small radiation, but so powerful, are at the very origin of the principle of life and we live in a healthy body when we vibrate in synchronism with the wavelength set by the Creator, length corresponds to a state of What perfect harmony health of this balance is broken, it is very quickly the disease or death. Yet these vibrations of living matter can be captured, photographed by a camera wonderful: the human eye, which records the real objective waveforms for transmission to the brain, sensitive plate. It can turn again through reproduce, such as projection, the positive of this photograph on a sheet of paper, the wall of a wall in the modeling of a statuette, etc. ... The true test of this invisible cliché therefore has an identity of form and vibration absolutely rigorous, with the original, and thus, it is mysteriously connected to it by the scope of CW still beats between two similar. Now their fate is linked, and any injury received by a double "will be felt more or less strongly by the chosen victim, any adverse affect radius and sent the unbalance his health. The target organ is it vital? It quickly the disease, paralysis, or even death depending on the state of resistance or deficiency Grand pleasing. Actually man, by his eye sensitized to radiation animal of the effigy on which it works, and people PRIMITIVE, who had the gift of Dowsing a remarkable degree, were served quickly this power to the success offers hunts.

VIBRATION TEST DOWSING

L. Chaumery - A. OF Belizal

In addition, to track the game, they had an instrument known as the c stick command "(Figure 3). Cc stick was just a pendulum that had the distinction of carrying on its walls engraved drawings of animals. Usually built of Wood or bones of reindeer, the baton of command was a perfect detector-indicator for hunting of this animal. Form straight or curved, pierced in its upper part with a hole for the passage of a cylindrical rod of wood or bone (rod man held horizontally by hand by one of its ends), the stick pendulum girait around the support (by law CW) as soon as the hand of the other arm, forming an antenna, caught the radiation-reindeer, and this regardless of the distance which was the beast. To locate other game it was enough to eliminate the Magdalenian in his brain all the drawings of animals finely engraved on his staff, keeping only the subject of the chase: this is called mental selection . The man was now certain to capture radiation of the coveted animal, because his brain, acting as a real device selective TSF departed all wavelengths except that he wanted to make sensible. This power of dowsing, of "witchcraft" was known in the Middle Ages under the name of bewitchment (Latin invultuare e indium If in-station: to the image of someone). Buff, caster, diabolical influence, it was said at the time. Act and similar fields CW, we respond today. However, if dowsing obeys strict laws of physics, it claims to be practiced with a clear conscience and right. God created man free, but there is no freedom without responsibility and responsibility without homework. That of any dowser worthy of the name is to use the art in view of the property and for noble causes.

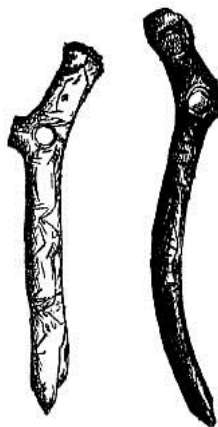

FIGURE 3.
Bâtons de commandement.

That is why once, those who indulged in practices spell on statues of wax conforming to the shape of a designated individuality, were condemned to death by fire. The court admitted the pin which each pierced the daye heart of the statuette finished by doing a fatal injury unfortunate that it represented the same by drying or melt fire figurine, original languished and was soon succumb. History provides many examples of the charge of sorcery When Enguerrand trial Marigny in 1315, Louis X inclined to indulgence, but Charles of Valois who wanted the loss of Marigny, claimed that the woman he had tried to bewitch the king and the whole family, which destroyed any sense of mercy in the heart of Louis X. More Bacon in 1617, when Leonora Dori said Galigai, widow of Concini, Marshal d'Ancre, was prosecuted and convicted for having dominated the spirit of Marie de Medici, also claimed she had retained images in waxcoffins. Such spell was a tradition of antiquity and found the following passage in the book of "

Plato's Laws

"

"It is useless to undertake to prove to some minds, strongly warned, they should worry about the points small figures wax that would updates their door or at intersections, or the tomb of their ancestors and to urge them to despise because they have confused faith in the truth of these spells. He who uses charms, enchantments, and all other spells of this nature, intended to harm by such wonders if devin, scholar or paid in the art of observing the wonders that die. If having no knowledge of the arts, he is convinced of having used witchcraft, the court will decide what he must suffer in his person or his property. "

In the sixteenth century, fashion spells became quite popular. We know that the Duchess of Montpensier often employed the curse against Henry III, and she appealed to the dagger of Jacques Clement after several failures due very probably incomplete knowledge of the laws similar. Catherine de Medici was also used several times in the spell, while fearing for her- even its terrible effects, and when La Mole and Coronas were delivered in the last punishments, she appeared very anxious to know if they have not had not bewitched. This is because, as long as the effectiveness of this practice was allowed, there was more security even within the power and absolute care who watched the gates of the Louvre does not defended kings.

CHAPTER II CHINESE DOWSING

Pa-Kua - Yin • Yang. - Acupuncture Dowsing.

We just briefly describe what we felt was "dowsing" in some methods employed in the prehistoric and medieval period. Then to observe another period more interesting because even dowsing currently reached a degree of perfection so complete it stood at a science. Indeed, the Chinese era which is about 3,000 years before the Christian era saw the development especially what we might call: the "dowsing the planar." The device used to study the rayonnement surface form is "Pa-kua" invented by the Emperor Fuh-Hi, and currently still widely used in China. It is a game of 8 signs consisting of broken and solid bars, following an octagonal layout whose center is occupied by a figure circular mobile: YK-Yang (Figure 4). Unprecedented precision, this transceiver has the property to radiate all the vibrations of the universe, from the infra-green black to negative (V-). The escaping radiation to all eighth of the octagon and the full cycle of the spectrum can be detected and on the periphery of the circumference. The issuance of this great instrument power can be further increased by just placing it in the N.-S. line and a control placed in the center can be detected at once and vibration sickness and vibration-cure. Exposing the strain of a sick person to the action of this healing wave positive results are obtained more encouraging.

FIGURE 4.
Combinaison magnétique d'un « Pa-Koua » associé à son
« Yn-Yang ».

What was the detector used by the Chinese to classify wave their Pa Kua? Was it a pendulum, rod, or simply the sensitivity of the subject? (We know that currently some dowsers are able to detect radiation through (the special sensation that affects parts of the body.) It is very difficult to know because the holders of secret Chinese gathered into sects who observe absolute discretion. Their members know that a disclosure made by one of them would result in a sentence whose execution always remain mysterious.

Anyway, studying pa-kua with our c pendulum universal "it is very easy to analyze and catalog the vibrationséchappen to t to till 1/8 the octagon. This device was certainly intended tomultiple uses, both for the study of radiation from the ground (ore sources, etc ...) and to detect harmful waves called c veins Dragons and which the Chinese took good build. He also served, as we said above, the study, detection and cure of disease, because people were very observant wisely noticed that two people withdisease even let slip waves identical, corresponding to the samesigns of pa-kua. It is in the infinite propertiesthis device that we put the wonderful possibilities of the ancient Chinese divination, opportunities still remain those of the country where everything remains unchanged, since the main instrument is the base is always used. This method has proved satisfactory for midllénaires is sufficient to itself. And who knows whether acupuncture has not been discovered in the pa-kua? It is a certain fact is that a wave-disease found with this unit can be overridden on thepatient, a "Pendulum Universal "loaded, or rather granted, contrary to the wave, and this naked through bites or keys dowsing s. Doingis reached branching Grand Sympathique , the healing wave is google automatically t led by it to the placetrouble and canceled. Chinese, patient man, for whom time does not count, spotted, carefully on the body human, the ideal point corresponding to each disease, and, ignoring the wave healer pitting Dowsing s, itexcites the Grand Sympathetic by the bite true.

CHAPTER III EGYPTIAN DOWSING

The ankh. - The scepter of Pharaoh. - The machine rolled. - The uraeus. - The Sphinx. - The mummies. - The Pyramids. - The T.S.F. the time of the pharaohs. - Compass Dowsing.

In a very remote area of China, Egypt, another people reached a high degree of civilization seemed to use dowsing with extraordinary mastery. It was only the preserve of the upper class; ignored the people, it was priests taught an oral way, and its processes thus passed from century to century. The layman could not see anything, everything was hidden and the waves were dressed in ways that do not alter their principle. In Egypt, dowsing a more complete way in China is conceived. It was always the form that was based, but if the country of the Son of Heaven it manifested itself especially in area, on the banks of the Nile is practiced in both surface and volume. We will submit the result to the reader our observations that bear on the study of these characters so special Egyptians, whose description has never been done in terms of dowsing. Consequences of the desecration of tombs of the Pharaohs, and in particular that of Tut- Ank- Ammon surprised opinion. This happened in 1922 or, we know that almost all the members who participated in the discovery of the tomb led by Howard Carter, died prematurely All these deaths have remained mysterious and defied medical skills more to the time. was supposed to explain all these deaths, that the tomb of Tut-Ank-Ammon was high at plan on natural noxious telluric waves from the ground. It may, in fact, that harmful waves exist below and in the surrounding tombs, but not are not sufficiently powerful to cause the dead man and, what is more, for example those of all members of the Carnarvon mission. These natural waves, if they were so dangerously harmful, would have the same destructive power outside and inside tombs, and many travelers who roam the Valley of the Kings would be the constant victims. It is therefore safe to assume or accept that these radiations were artificially created to protect the remains of the pharaohs. By what process? Probably by waves poisons carried by waves form because they had no secrets for Egyptians. This important issue of forms will be treated in the third part of this book, and when the reader will it is possible to produce and obtain waveforms, power infinitely superior to those found naturally in the soil, it might conclude like us. Egypt knew But if the process harmful to make a healthy place, it also had the means to immunize against this harm.

The ankh

. - The ankh or key of the Nile, the Egyptian translation would mean: sign

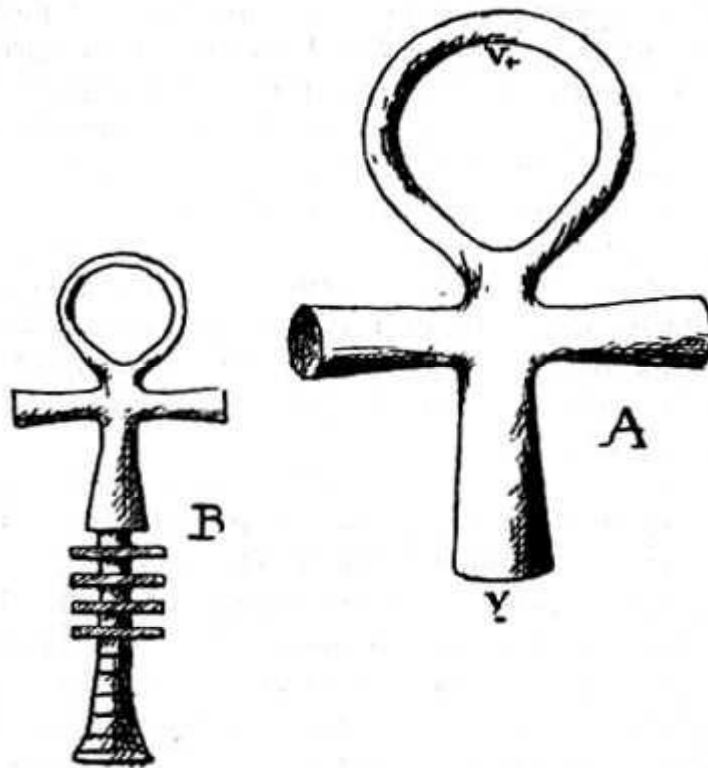

FIGURE 5.
Croix ansée égyptienne.
A) Modèle simple. B) Modèle à pile.

of life, the gift of the gods, is the proof. It was a talisman (Figure 5) reserved for the class aristocracy, whose effectiveness is no doubt the condition of being held by the man in the right hand and the woman in the left hand (s' it does not exist in one or the other polarity reversed). The ankh was also very harmful outside the purpose for which it had been studied, or if it was not required by the handle, and hand that suited. This harmful in some cases made it a double-edged sword, this stems from the fact that its vibration is not in agreement with the. has human vibration.

Indeed, the key issues of the Nile by its handle or green + green spectrum and by its end the wave green or otherwise -.

The scepter of Pharaoh.

- The Pharaoh's scepter (Figure 6), rather unsightly, whose shape curved hook suggests a magnet horseshoe unequal branches, has the same beneficial properties when it is held at the end, the longest. It is also an excellent detector when the loop is based on the portion of the index, and it behaves in its movements as the stick of commandprehistory.

The washing rolled

. - Another way to ward off the harmful waves was held in the hand (or caught in the belt) a rolled machine (Figure 7) and bent to 2/5 of its length. This process was often used pure shepherds who also used this machine at night to ensure the cooling. Needless to point out that the same properties of these three forms were certainly not the result of a chance, the Egyptians possessed the science of waves at the highest point they had studied forms likely to highlight, while veiling as mundane appearances.

FIGURE 6.
Sceptre, insigne
du Pharaon.

Figure 7 Binding rolled

Figure 8.Uraei

The uraeus

. - The uraeus serpent sacred (Figure 8) that adorned the friezes of monuments and also pschent Pharaoh and the front of his wife launched a powerful wave. Aligned in series, they added up their power to bring it to a dangerous point for the human creature who was in his field: Which could be the property of the snake on the front of kings and queens? One would assume he was, by his powerful wave, for carrying the wave of thought to give it more strength and more to penetrate the brains of their subjects.

The Sphinx. - The Sphinx is a fabulous monster whose origin is essentially Egyptian. We find represented in the form of a reclining lion with a human bust or woman, sometimes he has a head of a ram or hawk. There several classes of sphinx: the androsphinx,

the criosphinx, finally hiérocéphales (Ligurian 9). At Thebes we went to the great temple by a long avenue flanked on each side by a row of sphinxes. The largest that we have discovered in Egypt is near the pyramid of Cheops, it is 17 meters from the ground to the top of the head and 59 meters from the line at the end of the legs. It is almost entirely carved from a single block of rock and construct was previously performed to the three pyramids.

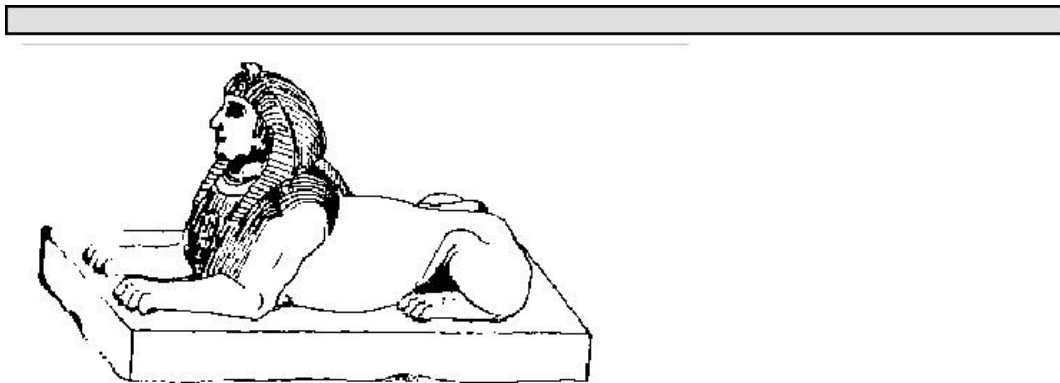

Figure 9
Type de sphinx.

It is really not possible that the Egyptians undertook this work colossal for the pleasure to work as a sculptor. It is very certain that this form had a different purpose and rays that emerge suggest that the Sphinx had a dowsing role of first importance. If we study under which it occupies in Egypt (on one boards Champollion) and that with a sensor and a vacuum indicator, there is a positive reaction in the mass of the animal. These reactions appear to be in the location where normally must find the intestine. Thus detects a maze whose one end is dying in the Great Pyramid of Cheops.

Mummies. - Any thus reveals that in Egypt the dowsing science was applied in a way complete. The colossal statues in their hieratic position, had their wave field, the silly statues mummies found in museums and collections also emit powerful radiation. The peculiar position of these statuettes (Figs. 10 and 10a) (ie the double mummies c) tight legs and arms crossed on his chest, gives the height of the forearm, on the side, emitting waves very ("Let's let, or rather assume that in WU real mummy we have inserted a poison; kit waves produced by the shape of the wave become carriers of the poison, and it then acts on living with all the intensity of a venom absorbed by the body.

VIBRATION TEST DOWSING

L. Chaumery - A. OF Belizal

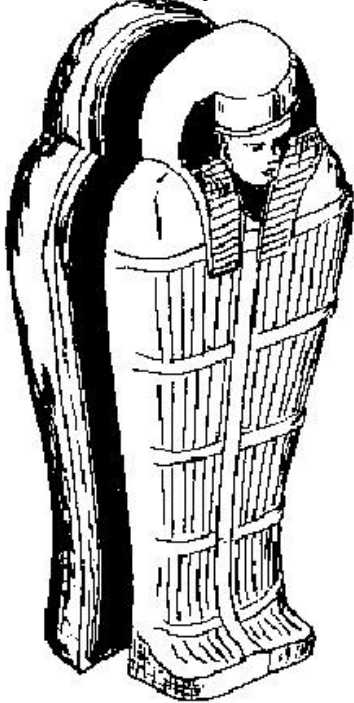

FIGURE 10.
Sarcophage égyptien.

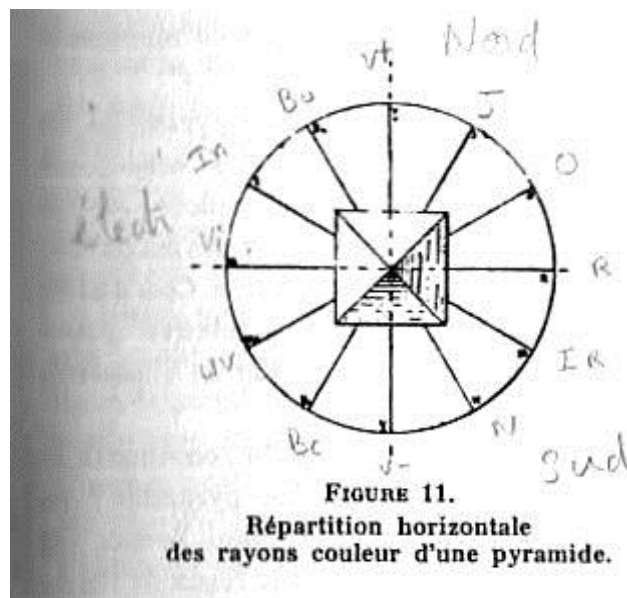

FIGURE 10 bis.
Statuette
de momie égyptienne.

The statuettes are themselves very formidable and we personally experienced. Mr. Lacroix-to-Henri shipped us one day a lot of authentic statuettes whose owner wanted to get rid due to health problems, since she felt disorders was possession of these mummies, Mr. Lacroix himself worked hard when these statues are found on his desk and he also felt violent headaches. Although duly warned us we showed skeptical, yet after a few days we suffered the same ailments aggravated by the complete loss of sleep. So they had to face the facts and try to neutralize these harmful effects by reversing the polarities with respect to magnetism land.

Remark. - For documentary we can report a pendulum having a polarity well defined: positive or negative, reverses polarity if it is rotated on the reverse wave position mummy. This demonstrates the transmission power of this form.

The science Egyptian. - Hypothesis. - The Pyramids Dowsing lighthouse. - The knowledge that the Egyptians had in all areas, both in astrology, in Mathematics, in geography, is a precision that still confuses scientists currently the most qualified. Why is this so complete science in an age where the instruments of precision were nowhere near ours? They measured, in particular, the diameter of our planet with rigorous accuracy *déconcertan* you (Mysterious Science of the Pharaohs By Abbot Hubs). They still built the great pyramid of Cheops on the 30 ° from the equator, and a meridian, while at the same time, the particularity not only divide the Nile Delta of one way

states by the intersection of the diagonals, but also divide the tip of our land in parts two equal fractions, while traversant maximum continents. At a time when science and shipbuilding did not allow adventure and exploration from one hemisphere to the other, such precision remains a mystery. Old maps, even subsequent to Pharaonic centuries were blanks waves that posed no ment reality. exact geographical To have achieved such results, two assumptions are needed in our judgment or the Egyptians held the secrets of the distant past, this generation of "Atlantis" that had preceded them and they were the descendants; or they have contributed their prodigious knowledge dowsing as exact science, and in so doing they would have used the method of detection on a map or téléradiesthésie, which was developed, there was some twenty years by the Abbe Mermet. Let us now on the study of these pyramids, which is the most exciting, if we detect with our devices accuracy. these properties we suspect they were they once used? It is difficult to accept that their influence was not known and that the same construction of the pyramids, one at least, that of Cheops, was not designed for a purpose dowsing same time for otherscientific goals already reported by many books. Therefore everything leads us to believe that they were used as dowsing lighthouse can be used not only to seafarers but also to passengers traveling in the desert. 's formidable mass of the Great Pyramid although lacking its limestone coating emits a wave that still can be estimated at $2^{\circ} 5$ in the east-west direction. This radiation is considerable ment increased in position north-su d, which agrees very well with the gen geography of Egypt, in any length. Main function how could this lighthouse? Only its form and experience is easy to check: a pyramid laboratory (Figure 11) is placed at the center of a sheet of paper, take our "Universal Pendulum "and che rchons detect wave it emits s we will be possible to draw a sort of compass made of colors of the spectrum, colors still retain an invariable position. Between each of these radiation is detected range complete their infrastructure and ultra. Understandably a browser or a traveler in the desert, steep a pendulum giving the full range of the spectrum, could in each wave sector , translate the color degrees, so get its orientation relativethe monument transmitter.

may be objected that the three pyramids of considerable mass, thus giving three parallel rays of the same color, spaced from each other a mile maximum two hundred abducted any precision operation. It certainly had a relative importance when the observer was at a thousand miles for example. Moreover, it was possible to recognize the characteristic radius of each pyramid, in fact, each of which had its own radiation that walked on the radius-color how-wave modulated onto the radio wave. They had waves respectively in accordance with orange, infrared and black, like our posts emission have their special indexes and length of clean wave. These features colors for each pyramid may have been consistent with their different mass. In any case it was enough to hold in hand color characteristic selected (orange, infrared or black) to capture only the rays of the pyramid emitted, the two others being automatically eliminated. Being able to identify the direction of denying or on land, in relation to a fixed point, was already a big advantage, but there was an additional data as necessary to fix its position: the distance where the it was this fixed point, so navel Egypt. But the thing was possible, either with the "Universal Pendulum" or using a dial gauge distance and whose agreement for a given point can be obtained by turning a neutral clock.

Second hypothesis: The Pyramids, transmitting station. - In addition to its role as flagship dowsing, the Great Pyramid, which, according to the findings of the learned abbot Moreux, was alive and full of Egyptian science form, was well have other properties as those of mathematics, Physical and astronomical. Was she not at that time the transmitting station that allowed the pharaoh to communicate and to dictate their orders to the people? It is recognized that some sort of TSF worked then, though so far only person ever in. discovered the mechanism this point of view, however, the internal study of the Pyramid of Cheops is the most suggestive. We know from the work of Father Moreux: The Science mysterious of Pharaohs

the king bedroom has a trough which is considered by some as the lower part of a sarcophagus. That is not the opinion of the author or ours. Indeed, this trough, too deep to provide coffin, is an excellent size-shaped rectangular parallelepiped. Ability interior is exactly half of the total volume, including vacuum, and it is very likely that proportion which gives the property to resonate like a bell at the slightest shock. On the other hand, the trough is placed in a rectangular chamber whose volume 50 times larger, is shown on the walls by visible joints. Above the room in question are five cells of the same base surface, it seems, but smaller in height attributed by scholars to Egyptologists concern for manufacturers to produce a discharge to the heavy mass that is above. This reasoning does not seem to conform to reality, especially the chamber of the queen, located well below (hence in a more formidable mass) did not these compartments, which did . prevented not withstand the pressure it receives our point of view, the five cells overcoming the king's chamber (currently . pa4 communication a central hole that did not exist then) had a main role Dowsing: they are for us dowsing battery needed to strengthen the carrier wave of the "blue" color which rises vertically from the king's chamber. Was this wave regarded as the best to carry sound? The future will reveal perhaps one day, because now our work is not sufficiently advanced to affirm without error. Anyway we find the blue wave in other instruments, even Hebrew, such as the Brazen Sea, where the wave in question is generated by the support, formed

as everyone knows, 12 cattle divided into 4 groups of 3 animals. There were also 10 vessels of brass a fiftieth volume of the Brazen Sea, and the last was itself the volume of the chamber King of the pyramid of Cheops ... Coincidence curious that let us assume that the Hebrews arrived to surprise the secrets Egyptians. And the receiver will say it? Well, there are in our museums, at least at the Louvre, furniture Egyptian whose saddle-shaped ornaments is surrounded (Key of the Nile and dowsing stack) which give this furniture the property of emitting on its plate and the center of a vase, still the same vibration blue (Figure 12). vase What was the receiver? Was it a resonator tuned to F sharp in the form of those currently existing in physics, or a vase in which we hold a specimen and its single ton emits blue wave?

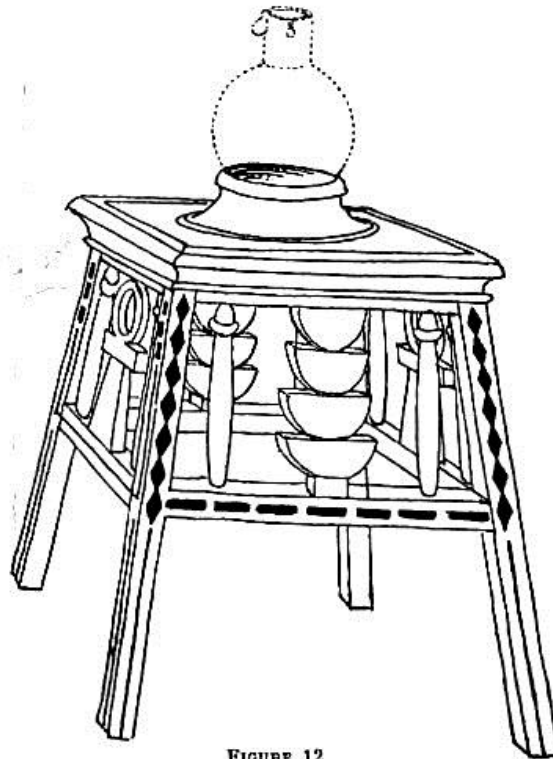

FIGURE 12.
Meuble égyptien émetteur d'ondes radiesthésiques.

We do not conclude for the moment, but it would, however strange that all this set has not been designed for a special purpose, which is for us the transmission and reception of sound.

Compass radiesthésique - It has been sometimes wonder how the navigation at the time of the Pharaonic period, could take place in conditions of safety necessary to shipments relatively distant to the time.

We have seen that in the near area of the Nile Delta, it was already easy, but as the influence of radiation of the pyramids was a limit in the distance, it was normal that other means existed (in outside the compass), to head to seaCompass, in fact, was not yet known and it is certainly the dowsing that the Egyptians did call for an update. following a process that we have achieved and which can give an idea: Imagine a circle in any matter, the center of which we place a proportionate pyramid, and such that a detector specialized clock you in the middle of one of, its base faces the rAyon + green. If we put this system remains on a boat so as to coincide the radius of the pyramid with the axis of the vessel, we detect the circle two gyrations of the detector (Figure 13), one constant Green face of the pyramid, the other to a variable point in the direction of the ship. This would correspond pen sounds we in Northgéographiqu e. One can easily imagine that the direction of the boat relative to the North could be read in degrees on the disc.

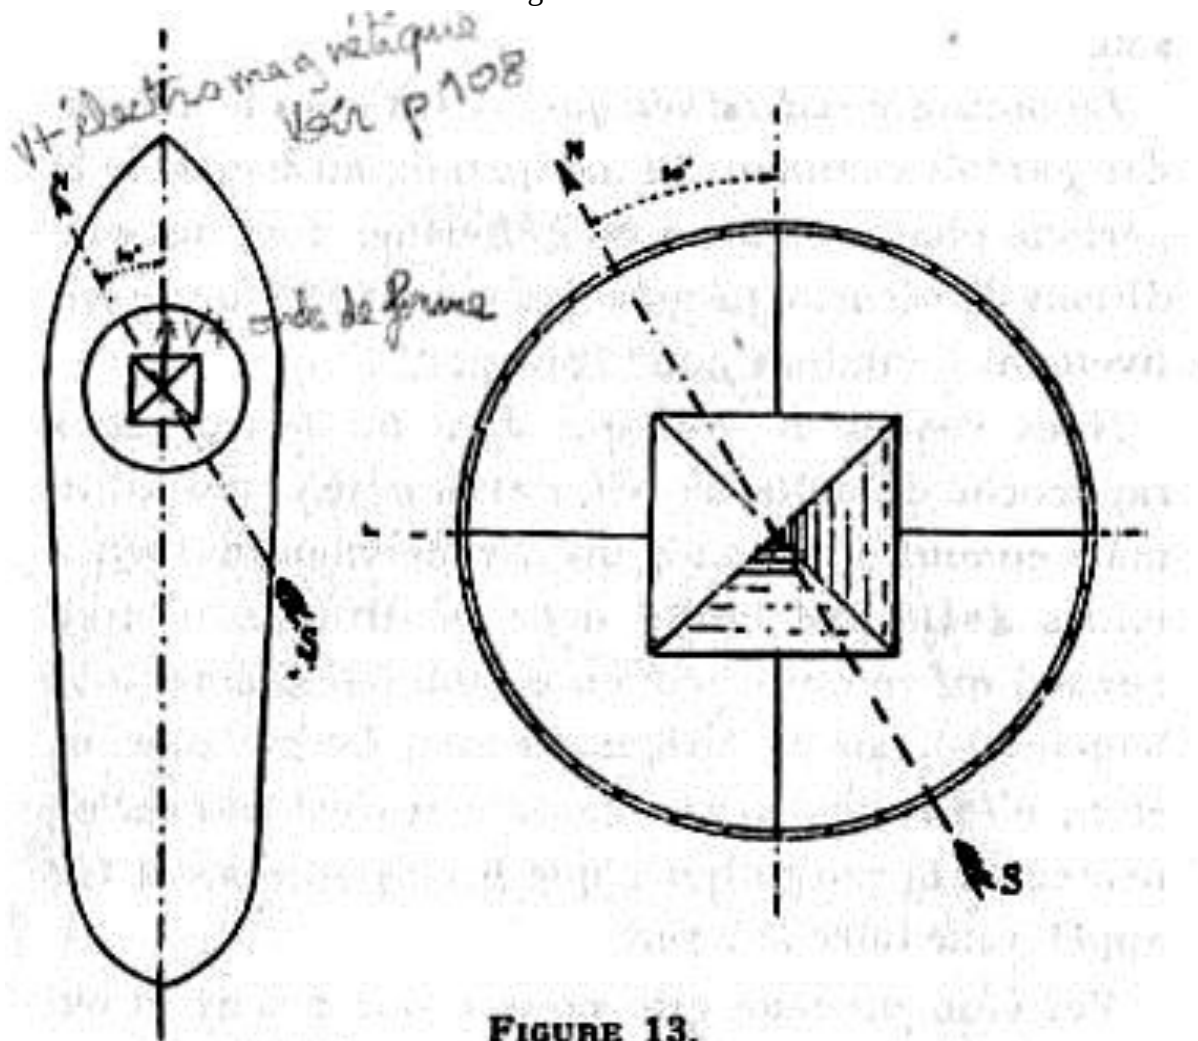

FIGURE 13.
Solution radiesthésique d'un compas.

CHAPTER IV INDIAN DOWSING Indian conch

If we knew that the Chinese and the Egyptians held about the same time the secrets of dowsing was unknown by cons that it could exist at the same time on a continent completely separate: America. We owe this revelation to Mr. Turenne quoting in one of his books, an instrument of high value: the Indian conch. This finding suggests some reflections. Of two things, or Indians found themselves dowsing, or they take other peoples. But then we must admit that their distant land has not always been separated from the old continent. Perhaps too, it is almost certain that these same people are the descendants of a race very old old, who held, as all the first men the secrets of Science One. Here in this regard that writes Denis Saurat in gift recent work

Atlantis

:

"There are about three hundred thousand years, a highly developed civilization, and very different from ours, was established in Andes, at a height of 3,000 or 4,000 feet above the Pacific Ocean current. But then the ocean rose to this height of the mountains, and the civilization of Tiahuanaco was at the edge of the Wed That is, the air was breathable, whereas now it is almost in these regions. Why water and air were they accumulated at this height? This is the satellite of the Earth at the time, the type of our present moon, was only the distance of 5 to 6 statute Us rays. Instead of a tidal comparable to that of today ' Today, which rises and falls pace that our moon is 60 earth radii us, the tide then, attracted by lunar gravitation much stronger, no longer had the time to go down: this powerful moon turned too fast around the Earth. As all the world's waters were piled into a permanent wave that formed a stationary bead around our planet. This fixed bead rose to more than 3,000 meters in the Andes. This is proven by line deposits marine which can followed for 800 km at these altitudes. From that civilization of Tiahuanaco of the region of lake Titicaca in General it we rest of gigantic ruins. Oldest chroniclers of South America tell us that when the Incas managed to these countries, they found the ruins roughly in the state they are today, and back to them already an immeasurable antiquity. hewn stones have indeed characters that are not found anywhere else until now. First their dimension. A of statues, in a only stone has more of seven meters of height and weighs ten tons. There are dozens of such monolithic statues, all transported away."

This documentation drawn from a reliable source confirms that the logical theory support of many scholars, it also suggests that the man in its distant origins, had a higher than science peoples who from all.

VIBRATION TEST DOWSING L. Chaumery - A. OF Belizal

For a full earlier than Egypt and China period, mankind has lost more than won, and debris from science she could keep in dowsing would be the remainder of a single science. From anyway it is apoint to us very important, to see that we find among the Indians a dowsing formas we found in China and Egypt. third party We will give a complete study of the rays of the Indian conch whose shape recalls so strangely that the snail

CHAPTER V EASTER ISLAND Statues. - Tablets.

We can not end this historic part without reporting the very interest large raised among scholars, the enigma of Easter I'le. Many missions have studied the island in its minutest details. Once Evangelized by the Congregation of the Fathers of Picpus, it still retains its church where the parties meet and Sunday the natives, failing priest, a layman is follow the true divine services, and thus maintains the population among the rudiments of religion Catholic. The people, very few, are unaware of the history of their island, or tell fantastic stories that are similar to legends and which scientists sent on a mission paid no debt. Yet one fact remains that, by its mysterious hand, does not bear testimony least a civilization long gone. Does not join the Lake Titicaca, which is alluded to in the previous chapter? Despite the time, despite a systematic destruction and blind, large statues which make the originality of the island are there, standing or lying down, discreet guardians of their distant past. They were carved in volcanic stone found on site and planted in the ground along the coast on which the island abounds ahus. Their dimensions vary widely but still impressive (some reach up to 16 meters tall) make menhirs kinds of traits that superhuman, after Pierre Loti "scary." It is very difficult to pinpoint their locations primitive, some are lying, others broken, very few still standing intact, finally some still lying on the slope of the volcano where they were carved. What is sudden catastrophe had upset the country at work and nullify its population? If we still refer to the

Atlantis

Denis Saurat, we learn that the destruction of this great civilization had to occur in the Tertiary era, when the third satellite climbed this time around our planet disintegrated in the earth, causing seismic disasters and of ocean movements that have shaken the continents and destroyed in part of humanity. It was the golden age of the humble giants whose many fleets roamed the seas of the globe with, as a base, which now became the high peaks of the Andes. Listen to Denis Saurat:

"Well powerful reasons have caused the erection of the stone giants of Easter Island. The state of perfect Tiahuanaco civilization, reflected in the very face of giants state, encourages us to imagine there was a departure of humanity. Colossi has carved were erected in civilized communities where the work was shared and harmony between master huge and beneficial and Human crowds grateful, as our cathedrals were built. But in this communities Titicaca, caste r Oyales were s giants and seems nt to have also put their hands to work. We may even think that the Egyptians themselves, when built their colossal, for their kings gods remembered the happy times when the giant

VIBRATION TEST DOWSING L. Chaumery - A. OF Belizal

Osiris had been taught sculpture and thought it was necessary to give a death god statue at its tail the wherein it could return without being embarrassed. "

And more hay:

"We can legitimately imagine that men Tiahuanaco, harbor , sea had ships that went around the world on their convex sea. Culture covering the whole habitable world was unified by maritime traffic. How to explain the otherwise surprising similarities? The cromlechs of Morbihan and those of Malekula? The giants of Easter Island? Legends of Greece and those of Mexico? Degenerate fragments of a high civilization that may lie there some three hundred thousand years and have been global. "

Without taking sides, but only putting us on the map dowsing, it seemed that these colossal statues stood in the life the island a role considerable, and met the goals very specific. The natives who have carved and distributed around their island, have not undertaken this intensive work without major reasons, and only for the pleasure of adorning their territory human masks. In doing so, they began to play wave contribution, this natural force which was enjoyed by all ancient peoples, which may allow us to be ourselves to raise the veil. of this mysterious past What strikes at first examining these statues is their proportions: strange, horrifying, superhuman es, but their gift NEET ownership of the waves powerful (Figure 14). What attribute this feature? A volcanic material from which they are derived? We do believe pass to us material is indifferent and this is the form that is. My is how to prove otherwise by making a piece of wood in a similar effigy, which is what we did. We were able to see that when as the statue took its shape, polarity moved to reverse polarity perpendicular to the original piece of wood, and, strangely enough, it happened before the statue wave of color planes, commencing by green negative to continue through the white, ultra-violet, violet, etc ...

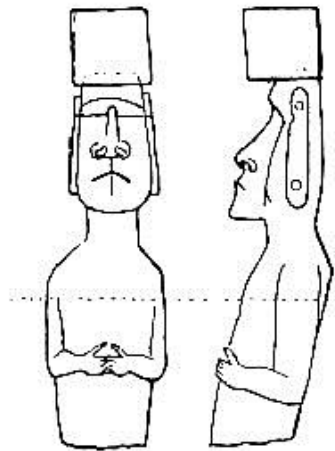

FIGURE 14.
Face et profil d'une statue-type de l'Île de Pâques.

Actually it is not exactly plans, and these areas wave should rather be called "slices" because they have a variable thickness which is related to the size of the statue.

To make sure that we were not victims of illusion, auto-suggestion, we determined the exact location of area Mummification and we placed a piece of meat there. At the end of three days, it was perfectly mummified and reduced to 1/4 of its original volume. This test, compared to other, realized with our devices, indicated: 1 A shorter time mummification; 2 A smaller volume, thus a greater intensity reported by Dowsing our batteries. We must infer that the shape of statues of Easter Island is one that emerges, for the same volume, the most powerful rays, whose intensity is greater than that of statues mummies. But this is not all: if pure curiosity examines, on a map, the edges of Pile, found on all the shores of the white curtain vibration spectrum, followed by another ultra-violet and violet, ... etc, then the Green button almost completely negative earth. These areas can be valued at 1 pound each meter thick. It may be objected that these statues are not placed evenly along the coast, it is currently impossible to find locations color, where the cause no longer exists. It detects, however, very much as the afterglow, and the action due to this phenomenon will continue vraisemblablement longer. It is currently accepted doctrine that dowsing impregnation soil persistence or produced by any body, lasts as long as the body that caused it is remained in the earth; it is even said that within a radius from the statue the air leaves its trace in the same conditions. So if these statues remained fixed to the ground for millennia, the afterglow will last much longer than our generation and generations to come. Here is an experiment that proves this carryover effect: having our statue enclosed in a box rectangular largely calculated to be able to put in all directions thick sawdust packed well, we found after a few days, the box was crossed by the rays of the statue. (Compaction sawdust not possible to obtain the density of oak it, he would have had more to restore the fictitious parallelepiped in this sort of case molding.) The statue removed, sawdust always issued rays and harmful plans as we were forced to sow the wind to keep us from its harmful effects. In addition, for we guarantee against this effigy itself and render it harmless, we had to cut the neck and the head still gave radiation, but low intensity due to the decrease in volume. It is impossible to deny the massive action of these statues, but this action acting on the coast and at sea, also exercised over the interior of the island where areas capable of waves are detected inconvenience to people not equipped with protective bars. These tablets were no doubt the instrument of preservation island can be the harmful waves of their statues. (Figure 15 inset). According to the RP Mouly there were two systems of tablets called Keiti, some large dimensions located in the boxes, the other reduced volume, a specimen of which had been offered to Bishop Janssen, Vicar Apostolic of Tahiti. This tablet had been presented by the natives, surrounded by many hair woman. This would assume that the islanders placed

VIBRATION TEST DOWSING L. Chaumery - A. OF Belizal

the Keitis in their hair to allow free body movements while preserving the individual. They could confront impunity hazardous areas, both by sea and land without experiencing adverse effects. Photograph of one of these tablets quilted ceiling of an apartment waves removes harmful soil, and if we found after some time an effect of wear, it is only due to the photographic print that has no own volume. The tablets themselves to characters engraved immutable form indefinitely retain their properties. How practical utility could serve these colossal statues which the natives of the island were forced to guarantee? Toul suggests they were used to protect the inhabitants of any invasion of looters, as if the harmful radiation that s' extended more than 10 miles out at sea that could reduce considerable vitality ment intruders and perhaps do so abandon their projects.

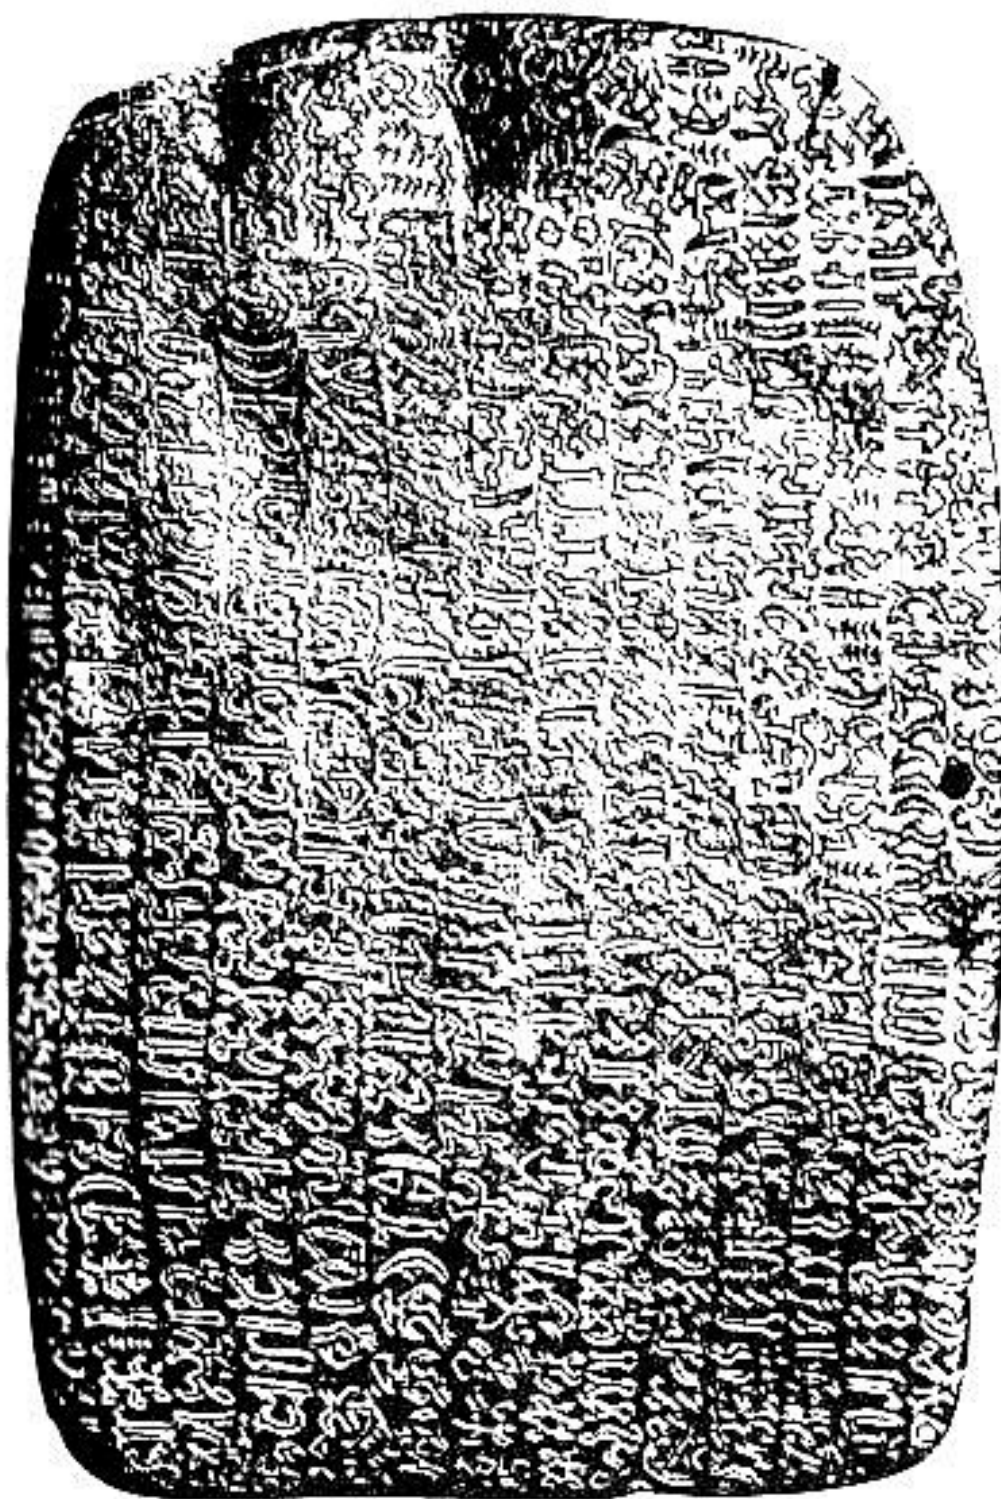

FIGURE 15.
Tablette gravée de l'Île de Pâques.

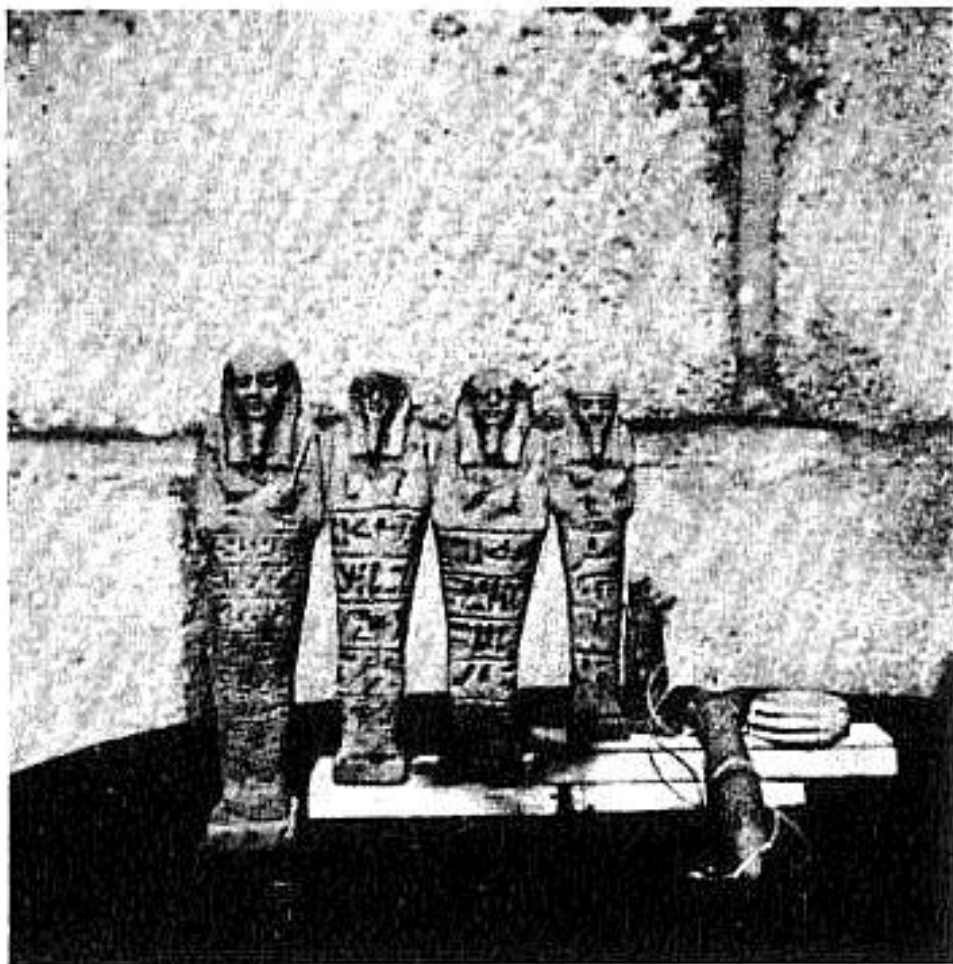

FIGURE 15 *bis*.
Statuettes et objets égyptiens véritables.

VIBRATION TEST DOWSING L. Chaumery - A. OF Belizal

On the other hand, the area within the ultra-violet was probably the natural pool where the islanders were to some good fishing. Indeed, fish, managed by other radiation emitted by the statues, were taking refuge in this limit bathed by a radioactive wave conducive to life.

PART TWO

CHAPTER ONE

SPHERE

Preamble. - Radioactive Plans. - Color waves. Negative Green.

Addressing read second part of this book, after describing some manifestations of dowsing in prehistoric times and ancient history, let's get into the various technical detection instruments which allowed us to separate the waves in a method that us is personal, it is by studying meadows near the sphere we arrived at this new concept of dowsing. The reader should not expect to find here learned theories but just certain deductions, logical result of various experiences that led us to create and modify, and finally to improve our products. We approached the "magnetism natural "alone could generate vibrations and that was enough for us to purify what seemed mysterious to obtain a method to eliminate most of the causes of so many errors and ifdepressing, especially for beginners. dowsing Our design therefore is nothing if it is learned as a continuation of the ancient dowsing, and everyone will recognize that the phenomena observed previously without basic science can be understood today without use the most deductions of recentscience. However we could not completely neglectsome connaissanc are that very closely relatedphysics, allowed us to advance in our research. We tried to book oursensations dowsing physical impressions received, and to remove any which usually enters the pure mental methods. It is not that we have the intention to reduce the value of those who have registered real success, but we prefer to remain the mostpossible field physics seems more interesting. We could achieve this thanks to the discovery of our "Universal Pendulum" which has clean energy, independent of any convention or mental selection, provided that they remain strictly neutral, without issuing any preconceived thought-wave, if not the form interrogative. Before starting the description of the detectors that we have point, it seems to us necessary, even indispensable for the clarity of the subject, to first conduct a study of the sphere. This is indeed the basis of our method, and it is because we got to learn the secrets that we dowsing a new design and entirely personal.

Study of the sphere. - Suppose a sphere of any material, placed on a support, and such that eachparts of its surface can be explored. Using a pendulum giving radioactivity, we find, as Mr. Turenne, three circles intersecting at right angles.

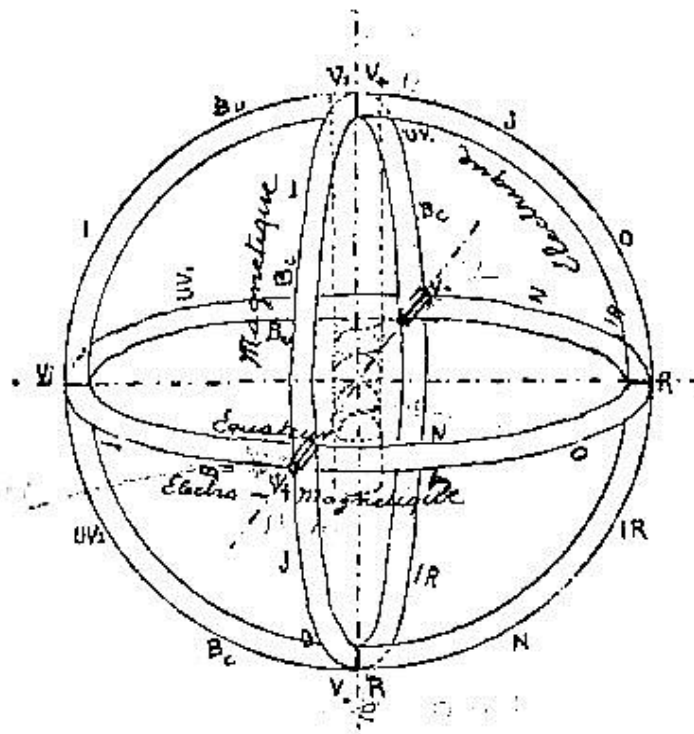

FIGURE 16.
Vue schématique des deux méridiens et de l'équateur dans
le Pendule Universel.

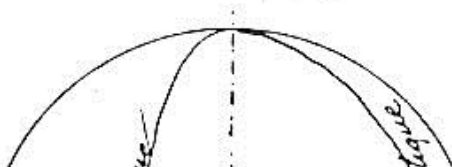

VIBRATION TEST DOWSING L. Chaumery - A. OF Belizal

In a further, by giving another clock, not the additional examination radioactivity, but the polarity, we find only at points N. and S. we have two poles contrary, demonstrated by forward and reverse gyrations of our detector. These two circles which intersect at N. and S. may thus be regarded as meridians, and the third as an equator (FIG. 16).

Study of Medi meridians. - Each of the two meridians has a clean and functional energy invariable:

- a) a transmitter electrical vibrations
- b) The other vibrations magnetic (FIG. 17).

VIBRATION TEST DOWSING L. Chaumery - A. OF Belizal

TEST OF DOWSING VIBRATIONL. Chaumery - A. DE Belizal

31 If we look at the meridian "electric" neutral hand pendulum, taking successively as witness the various colors of the spectrum (red, orange, yellow, green, blue, indigo, violet), we find that the upper part c ' is to say, one located above the equator, these emit vibrations seven-color spread regularly sixth interval (Figure 18).

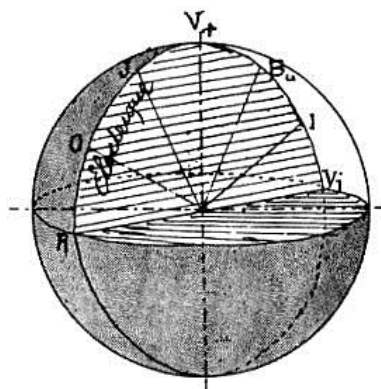

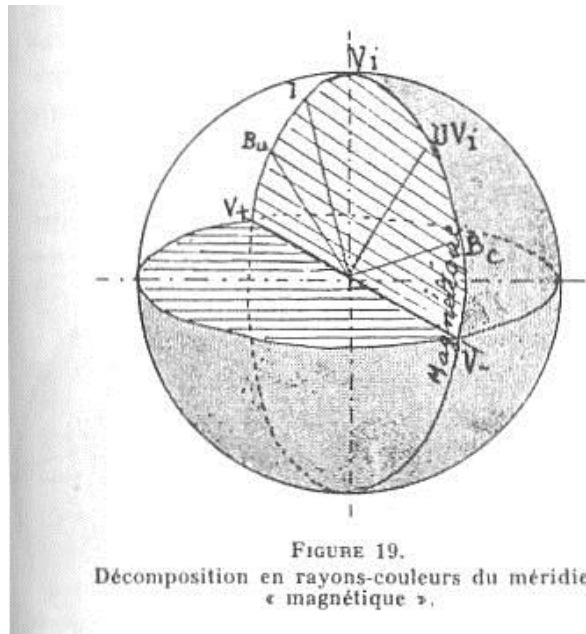

FIGURE 18.
Décomposition en rayons-couleurs du méridien
« électrique ».

's "magnetic" meridian studied under the same conditions is also divided, as part superior in vibration-6 colors: green, blue, indigo, violet, ultra-violet, white, green, negative (Figure 19) .

It is immediately noted that the distribution of the two-color meridians is not identical. Indeed, in the "magnetic" meridian we detect a fraction of the invisible ultra-violet, white, green negative, while in the "electric" meridian, we note only-ray color the visible spectrum.

Turning to the analysis of the lower hemisphere: We detect: a) Meridian "electrical": ultra-violet, white, green negative, black, infrared b) Méridien magnetic "yellow, orange, red, infrared, black (Figure 20). The lower hemisphere of the meridian "electric "therefore includes all vibrations invisible, and especially that which we designated by convention Green negative (V-) because it lies opposite the green spectrum.

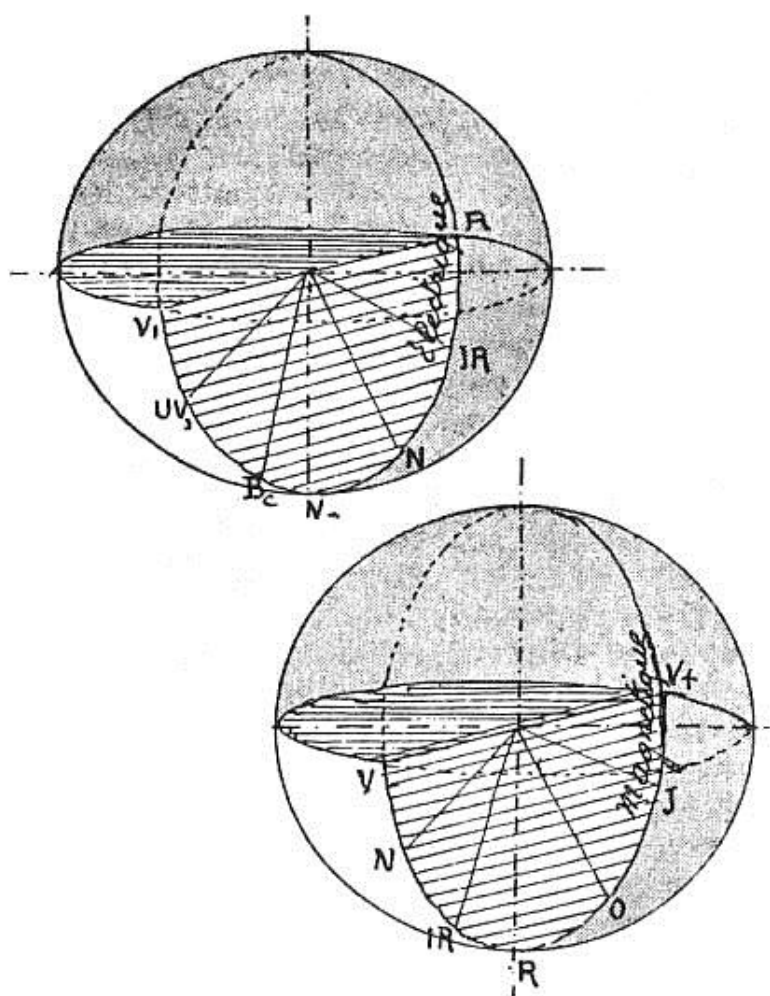

FIGURE 20.
Répartition dans les deux méridiens des rayons-couleurs
situés dans la demi-sphère inférieure.

It is a mysterious vibration radiating exactly between the White and Black and having the property to AW-IPM negatively neutral detector, subject to its action. As opposite to the green spectrum, North positive pole of the sphere, we named negative Green or South Pole. This is the existing shortest and most penetrating vibration in the Universe and its power of radiation is such that it passes through layers of lead, considered effective against the Rays X. Its discovery by us, dates back to 1934 and was the subject, April 10, 1936, a patent which protects all at once, and our equipment and our method of "decomposition of the spectrum in the Sphere." We demand the absolute paternity. In the medical section we will discuss the properties of our prodigious negative green Which not only provides a unique radiation, but a beam vibrations.

Study of Ecuador. - We find on the equator of the vibration-color distribution also is 12 divisions: 7 visible and invisible 5 (FIG. 21) with this particularité. que the + V coincides with the equator of the V + meridian "Magnetic".

you would think that crossing point R, the two colors can be felt on the meridian, it is not so and it is only the red color which is perceived.

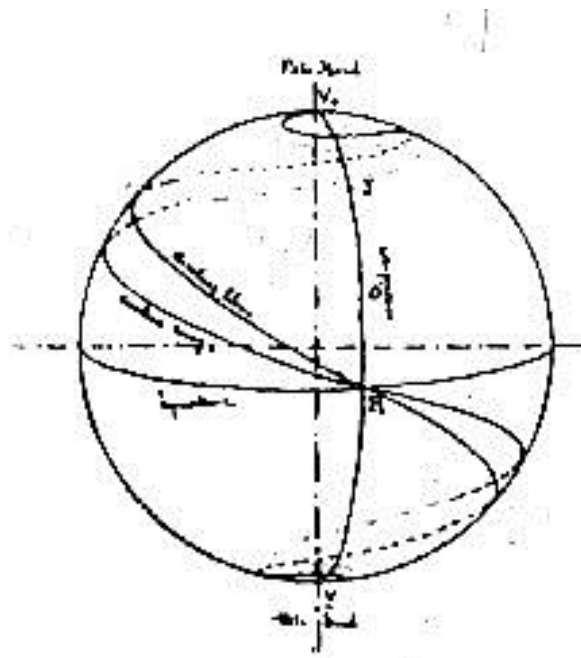

FIGURE 22.
Marche des rayons sur la surface d'une sphère.

CHAPTER II THE UNIVERSAL CLOCK Clock receiver. - Pendulum transmitter.

We based on the study of the sphere, as we have just explained, we considered using its properties, such as clock may be set to any vibration spectrum. But having calibrated in this way a sphere resting on a support, we noticed that after a few hours we will not find ourselves vibration-colors at the points where we had previously marked. What had happened? Taking our pendulum giving radioactivity we have seen that the meridians were moving in the direction of the sun: they were therefore not stable and" calibration corresponded only to a particular moment of a day 24hours. To solve the problem, it was necessary to fix definitively meridian and equator. In considering the sphere as a volume generated by rotating about its semicircle diameter, we thought it might be possible to break the harmony of the figure by inserting two metal masses at the intersection of the magnetic meridian and the equator, these masses sufficient to establish definitively radiant circles (Figure 23).

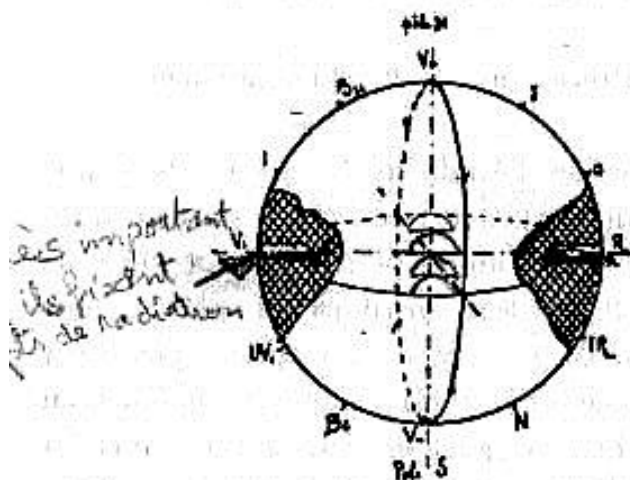

FIGURE 23.
Stabilisation des plans radio-actifs dans une sphère.

This is, in fact everything went as we had supposed, but the screws placed first, as mass, we substituted smallcopper cylinders which had phave the disadvantage of creating a harmful secondary polarity primitive natural polarity (especially taking the precaution to oppose the polarity of these masses). But how to make a spherical pendulum whose extension wire suspension could explore all the surface points of the ball? There was only one solution to a wire loop, non magnetic tick, hinged at two points opposite, which would slide on the wire.

We spoken in study the sphere of meridian " magnetic "andof Meridian "electric". One might ask why we awarded wave "magnetic" to one and wave "electrical" to another. We did after various experiments have shown us that electric wave does not pass through electrical insulators such as ebonite, bakelite, porcelain, etc. ... so that we find through a iron screen. For a wave against magnetic stopped by the same screen and iron is not aelectrical insulator. Pushing further the study of our "Universal Pendulum" we recognized that it was likely to make moregreat service in identifying all body table Mendelejeff. Finally we note another propertythis detector, known to play a role property significant in the future dowsing: the transmitter whose power will depend on the mass spherical. We know that dowers operating on the plan or on site for the search for an object they have in their hands the control, issue, unwittingly or not, waves that blur the research. But these programs, voluntary or involuntary, to using a pendulum any, can not do without witnesses except in the casepossess a very sensitive mind: therefore their power, Dependanta nt of the magnetic force of the operator is thereby limited. Moreover it is not possible to transmit, at will, asparticular wavelength, calculated with precision. 's "Universal Clock" fills this gap as receiver and transmitter, you can receive and transmit all the vibrations of the spectrum, both visible and invisible. It is the receiver when the hand that leads only records its motion, but when the dowser prints voluntarily turn, it becomes transmitter. Its action can then be compared to a dynamo that delivers current. Let us prove it: Take a folio blank paper and pendulum hand, the other style,

give our detector (previously set a wavelength X, by red example), a voluntary turning several turns, while the hand holding style draws a line Invisible on paper. In doing so, we impregnated the virgin sheet for which the pendulum wave was reg width and the unforeseen is gnationso puissan you that ux or three months later, the pendulum still detect, asafterglow, the red wave. To further increase the transmission power of the detector and stabilize its polarity (which can. reverse under the influence of a more powerful wave field) we provided internally with a dowsing battery which strengthens its magnetic power by raising the tension in the report 1 to 4.

Dowsing the battery as we have done and development will be examined in the following chapters.

• **HALF SPHERE - Wave distribution - Prisms dowsing rays**

It was interesting, after 'dissected sphere, which follows the " Universal Clock " that we have just presented, to examine the way in which has a half-sphere with respect to the spectral decomposition. Here again we encounter the three radioactive Plans (meridians and equator) with the difference that the equatorial plane passes through the center of the figure and not the great circle base (Figure 25). At the top we find in the vertical axis, the full beam of radiation from the visible and invisible spectrum, whose distribution on the outskirts of the hemisphere is at point 0. Below this point, we do not detect a single pure ray ray we have already referred to as the greennegative. The white rays and Black, usually cheminent in wake of V-here clearly separated, which allows to obtain a very pure negative green, big advantage, as we shall see later, in consideration of the battery Dowsing .

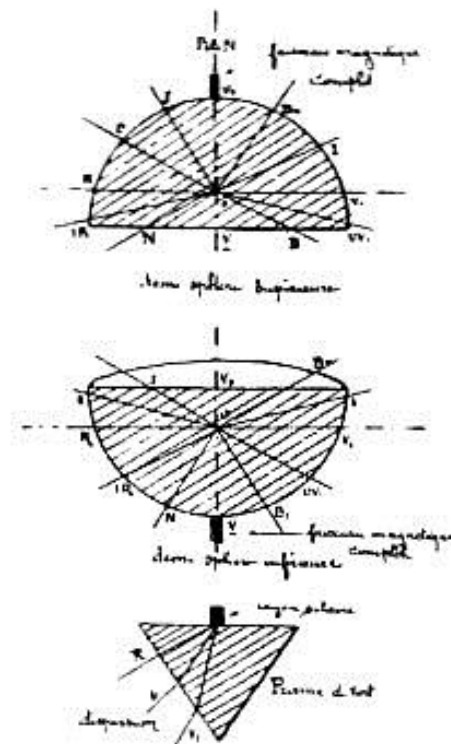

FIGURE 25.
Rapprochement du phénomène de décomposition d'un rayon lumineux et d'un rayon radiesthésique.

Remark. - If we imagine the thought the lower hemisphere, we find the opposite: the rays Black and White are very close together, while the Yellow and Blue

deviate from the vertical. The + V is pure and V-is included in the full beam of waves (Figure 26).

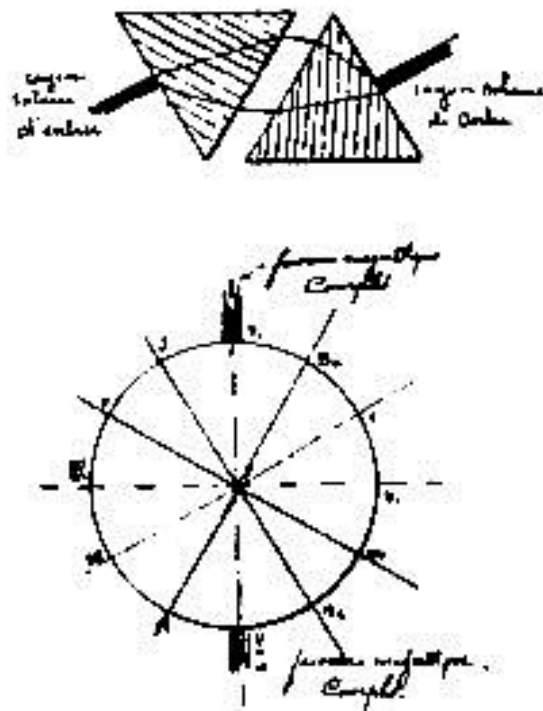

FIGURE 26.

Rapprochement du phénomène de décomposition et recombinaison d'un rayon lumineux et d'un rayon radiesthésique.

Does not it seem that the juxtaposition of the two hemispheres to produce a certain analogy with the combination, known in physics, two crystal prisms reverse and parallel. Everyone knows, by experience, that the light beam is broken in the first prism to recover in the second and finally emerge in the form of white light, the same radius that input.

CHAPTER IV - Radiesthesia BATTERY

The study of the hemisphere logically led us to the discovery of the "Pile dowsing" we will describe now and we took out a patent in 1936 (Figure 27). We should say to be exact, re .. . discovery because, after development, which was not our surprise to find that it already existed in Egypt, more than four thousand years before the era Christian. pedestal which we reproduce the drawing (Figure 12) is some evidence, since copy exact Egyptian furniture. Here, the battery is not flat but spherical half and 4 elements. Each brings his power that adds tension as the voltaic pile, the green ray negative of the first, in addition to that of the second and so on. Abattery dowsing 100 elements, for example, projects a raextremely powerful yon. Thus we find, somehow, in this stack as electricity, a "voltage" which is based on the number of half-spheres, and an amperage that is obtained by the diameter more or less large items.

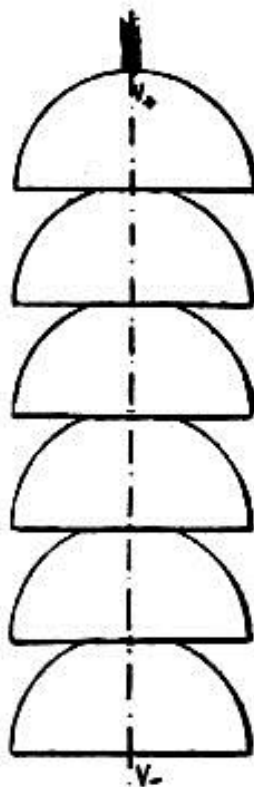

FIGURE 27.

Pile composée de six éléments en forme de demi-sphère.

It is possible, in accordance with the art of batteries, the batteries to couple dowsing or in series, or in parallel. With a 9-cell battery, it was possible to mummify as often as we wanted, meat, eggs, fish, flowers, subjecting the negative green ray is the ray momificateur par excellence he has microorganisms destroy property.

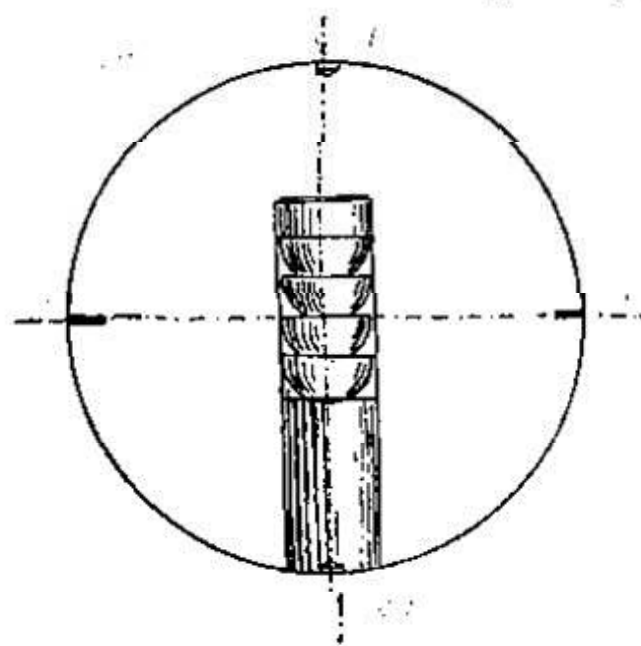

FIGURE 28.

Coupe dans un pendule stabilisé par quatre éléments.

VIBRATION TEST DOWSING L. Chaumery - A. OF Belizal

And that proved the beneficial power of our wonderful green ray negative. As in the experiment, it was recognized that it withered organic matter of a living cell or dead, why not try the experiment on a human body reaches tumor cancer? This is what we did in 1937 on a patient who had been operated on for cancer of the stomach, and which the surgeon had given up hope for his wife three months of survival, both case was serious. Roots of evil completely sterilized witness by our negative green the patient, 10 years later, still alive and died of otherthing. therapeutic properties of our negative green beam will be discussed in more detail in the medical section.

In the "Universal Pendulum" as a stack 4 elements, playing the role of stabilizer polarity adds a new property to the detector, since four elements represent the voltage of normal human or animal cell to perfect health (Figure 28).

CHAPTER V

Radiesthesia BATTERY

He was still logical, having established the dowsing battery giving a natural radius always identical, since according to its form, to examine whether it was possible to obtain, as in electricity, a secondary battery or accumulator. The latter can not store and charge plus a fixed V + and V-wave, but any wave range of the spectrum produced by the "Universal Pendulum." We have already seen that by voluntarily AW-IPM this detector, set example red, while the other hand we draw an invisible line or simply a style are pointing on a sheet of paper, we get to the exact spot touched by the needle accumulation wave of red. The detector behaves like a dynamo and delivers a wave whose power is proportional to the number of gyrations issued. Suppose now that by this means we impressed a hard edge, as far as metallic possible, we get the wave red which is given to figure 100 °, due to the inclusion in the "Universal Clock" of the presence of a cell .4 elements (each element giving 25 °) (Figure 29). So we loaded this disk-storage red, but if it gives out this vibration in the direction of the show, he recites, by cons in the other direction, the reverse wave, for red, will be purple.

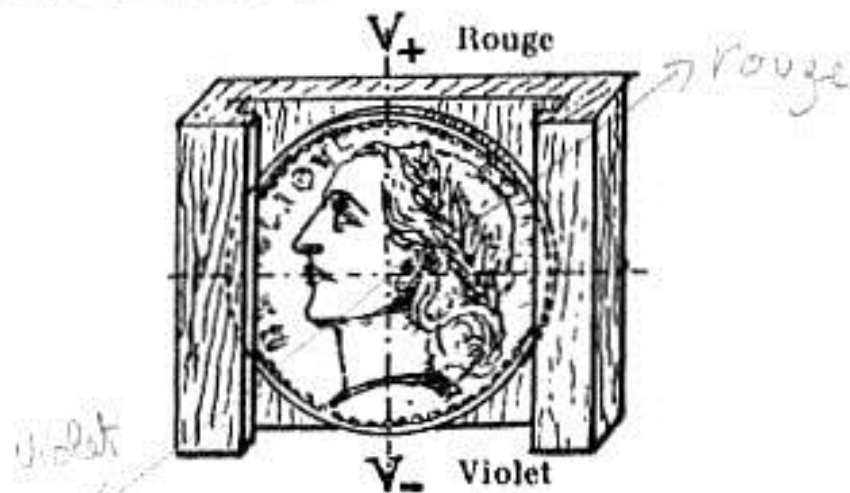

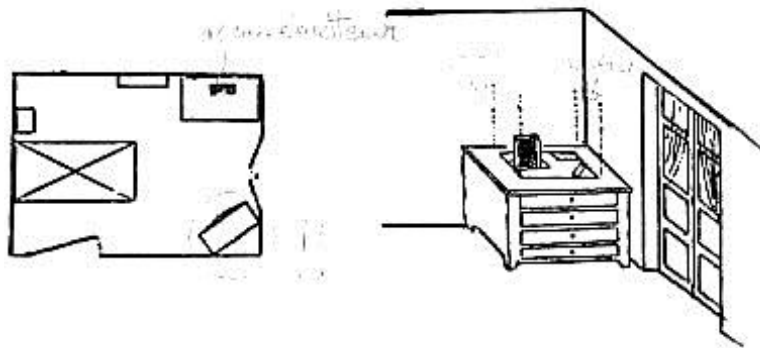

FIGURE 29.

Accumulateur à un élément dont l'intensité est portée au chiffre 100 par insertion dans le Pendule Universel d'une Pile radiesthésique de 4 demi-sphères.

important Conclusion: a charged battery with a radius Medicare automatically gives away a healer radius. It exposed a witness sick releases its beneficial energy in favor of the latter, and this memo very distance. Thus Brittany Holland we could remove warts on single strain.

CHAPTER VI *RELAY Radiesthesia*

The application of the accumulator has led us to a very strange solution that can meet many skeptics be: it is the dowsing relay the reality of fact can not be doubted, however, and worth to be exposed. It is clear evidence that a plane is closely related to the object it represents, provided that the plan is correct and oriented as the object. Moreover, we have the opportunity, treating harmful waves to prove once again the reality of this law of similars, one of the basic dowsing. let us get: 1 two identical batteries and blank 2 ° the exact plan of a property or an apartment. This fact, load as précédemment indicated, one batteries of a specific wavelength, and then ask it to on any point of the plane, well oriented along the N. magnetic. Yet, whatever the distance from the place of experience, we will detect on-site at the precise location where we impressed the plane wave whose battery had been charged with this feature, however, that instead of feeling one emission point, we find a beam. This beam can be considered ment magnifies the beam emitted depending on the size of the land or pure flat against the plan.

**FIGURE 30.**

Plan d'émission. — L'accumulateur chargé est posé sur un meuble figuré sur le plan.

Réception. — Le faisceau d'émission agrandi baigne complètement le plan récepteur, l'accumulateur étant posé sur l'emplacement du lit (plan), le lit lui-même, recevra l'onde émise par l'accumulateur récepteur.

Now if this where we detect the beam, we are an exact copy of the first plane on which we ask the virgin battery, we find that it starts to vibrate in resonance with the transmitter battery and gives the law of similars, a second beam identical to the first. This battery provided may be moved on the plan, as it contained within the transmitter beam, and it will then relay the wave it (Figure 30). practical reach: a patient can remain constantly under the direct action of the radius as it sends its dowser doctor, since it suffices him for that, according to his travel, turn the battery on different parts of non-planar: bed, desk, chaise-longue,

etc ... If the wave healer needs to be changed during treatment, what happens frequently from the health improves, it suffices that the dowser (which has a control patient), exchange, unbeknownst to him, the wavelength of the transmitter battery, so that automatically battery-receiver receives and the pteurrayon(ξ ?).

CHAPTER VII

SPECIAL CLOCKS -Neutral pendulum. - Clock shadow cone. - Pendulum Easter Island

Before studying the sphere, we already noticed that any clock, carved from a piece of wood also any, gave following the end by which it was suspended, the different reactions. obtained were as follows: 1. A positive turn or direct plumb a source with negative turn on the figures. 2 A negative turn on the source and the positive figures. If the pendulum behaved differently depending on the end at which it was suspended, is that polarity plays an important role in the detection, the observed phenomenon could not be explained otherwise, or n e surprise, c ar we did not know that not always t bodycrossed by a o u more magnetic currents (the number being based hereof trained body). detections in if there is not much downside to use a biased pendulum, by cons, in most other cases, the dowser's interest to have a detector strictly neutral and giving as much as possible, the vertical radiation with its figure of depth, to the exclusion of all dens.

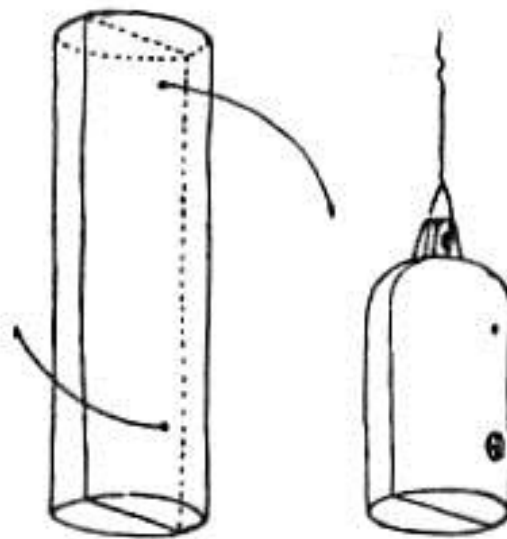

FIGURE 31.
Fabrication d'un pendule neutre.

This is why we sought to establish the pendulum would not his qualities as persistence or a desired mental orientation, but a method of making sure her absolute neutrality. The thing is also very simple to achieve. Simply by sawing center (FIG. 31) and over the entire length of the cylinder to make the timber for the detector, then one of the reverse

parts butt against each other to assemble the two parts again, either by using wood glue, or by means of two opposite bolts. The cylinder being reformed, there remained only turn to shape pendulum.

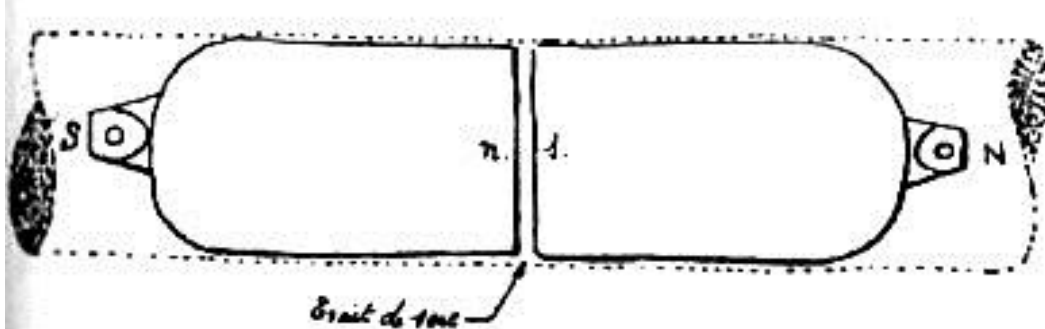

FIGURE 32.
Moyen d'obtenir deux pendules à polarité différente.

well We were getting a strictly neutral device, since at each end we had a positive half and a negative half. pendulum This however had the disadvantage of , mark the figures, so often causes many) errors. We therefore sought to remove them and we reached there around the bottom of the pendulum of a serrated crown (Figure 33), swam in the thickness of the wood and carried by lines saw as the attached drawing shows . We found that first line erased the earlier figure of the portrait, a second, the second, and so on, so that the crown is completed, all the figures were excluded, except the depth

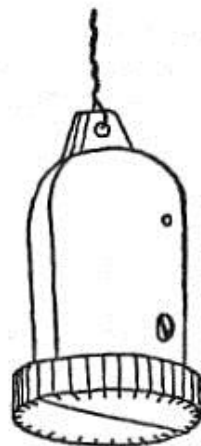

FIGURE 33.
Pendule neutre éliminant les figures.

Clock fictitious cone . - We have also developed another sensor that has him also, universal properties, since it is calibrated on all vibration visible spectrum and invisible. We named 'Clock shadow cone. " value vibration emitted readsinstantané nt on the scale liege wavelength. This small pendulum laboratory is most valuable and personally we do not serve him as for all diagnoses anatomical board..

Indeed, it is possible to grant this pendulum with the wave of a sick person. We want to talk about personal wave astral impregnation following every human being from birth until its death. In detecting with this pendulum color granted, we have infinitely more the chance to get it right. A replica of the Clock fictitious cone "is shown in the drawing of Figure 35. It is also sensitive and has more property to be transmitter. Colorimetric disk u its axis fixed between two jaws of a pendulum (pendulum type neutral s) and its rotation about this axis allows get all the visible and invisible spectrum vibrations complete.

Pendulum "Easter Island". - As a curiosity, we present a pendulum, to appear strange, however has real action and strong signs around the equator are selected from tablets engraved figures of Easter Island (Figure 36).

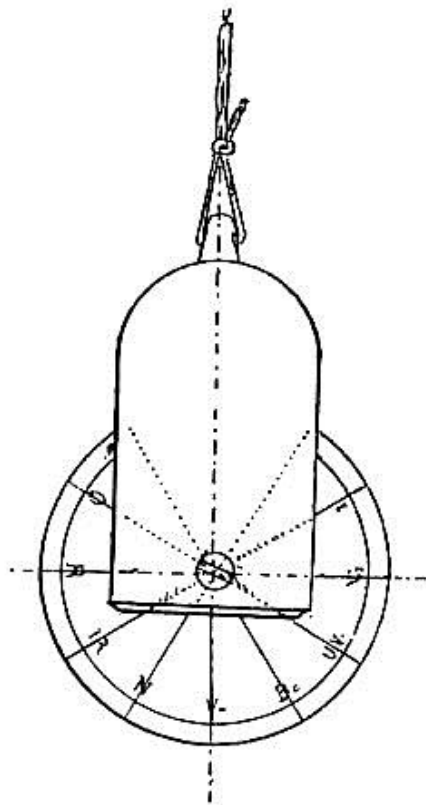

FIGURE 35.
Pendule à disque colorimétrique, émetteur-récepteur.

We searched the figures that vibrated in accordance with 12 vibration-colors, and the reader can verify itself on drawing the reality of these waves using a neutral clock and a set of witness color

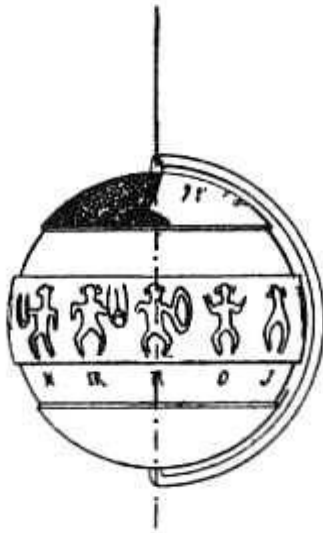

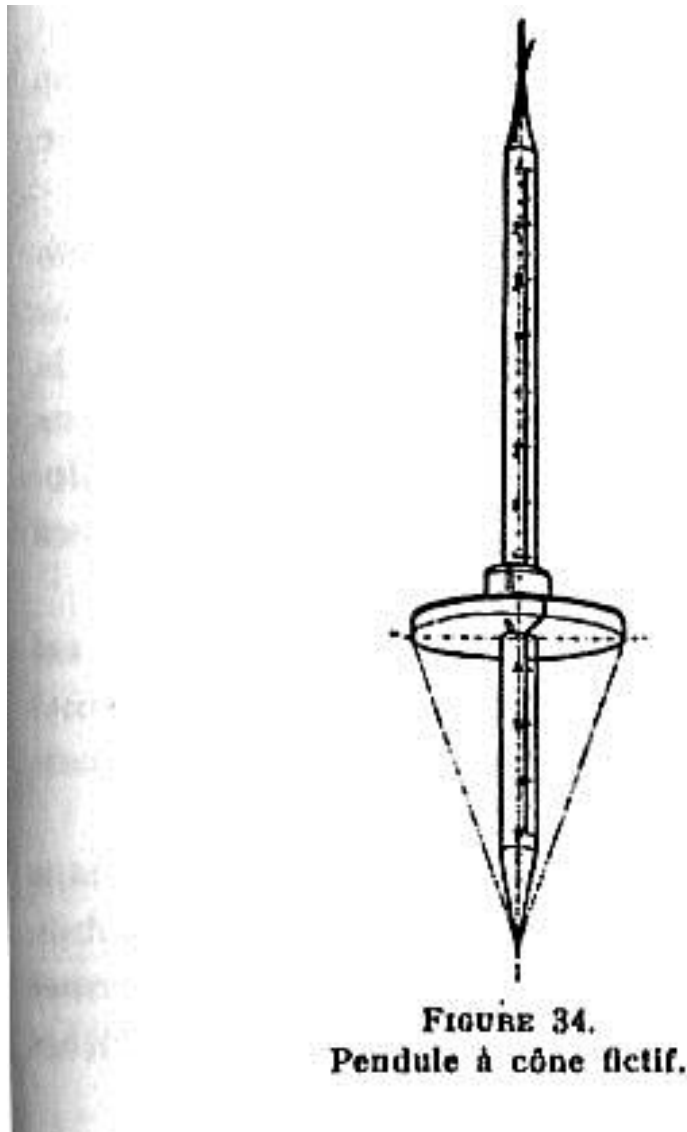

FIGURE 36.
Pendule basé sur les figurines de l'Ile de Pâques.

It is a wooden rod or metal on which vibration-colors were carefully identified, and which slides in a cylindrical mass (Figure 34).

Depending on the depth of the rod relative to the mass it crosses an imaginary cone is obtained more or less short or long.

PART THREE

CHAPTER I

WAVE-FIELD. - WAVE FORM

Pyramid. - Mummy. - Easter Island Statue - Sphinx. - Pile dowsing.

It is indeed important here to distinguish these two forms of vibration, as if the wave-field is the most known and most studied, wave shape, ignored most of the time, however, is expected to take in the vibrational dowsing tomorrow an ever and greater. This wave plays, the rest very often unbeknownst to the operator who can not defend themselves, and helps to increase a coefficient errors already all too many. This leads us to advocate dowsers set default despite their best intentions, they are faced with many unknowns, their science is young, so often questionable, but it will grow more and more in truth, for those who have looked at it gave him all their faith. There would, apart from the wave-matter of the fundamental beam, the radius of depth, another vibration that would be generated by the forms and take birth in the decomposition of natural magnetic current that exists in the center of figure all bodies. We have already given an overview of the study of the sphere and the hemisphere, we will not go, we saw some signs that also had different vibrations in wide spectrum vibration only the Dukes form. These signs are not the only one we have met since we were able to produce others, arranged in the desired order, as well gave the spectrum in the visible part that in its invisible. Thus we were able to compose clocks, just as accurate, using Roman numerals, and figurines found in tablets of Easter Island. What we want now is to highlight the influence of pure forms, although characteristics such as pyramid, mummy statue, sphinx, statue of Easter folds dowsing, etc ... In all these forms taken as an example, we find one or more decomposition of the spectrum magnetic. This decomposition is real and not due to a fanciful imagination, otherwise it would not explain statuettes mummy can upset and even disrupt profoundly healths, or that statues of Easter Island can mummify meat, fish under certain conditions calculated by the "Universal Clock." This is, obviously, very powerful rays in contact with which a pendulum, even strengthened, reverses polarity. These rays can contaminate a home by their own actions, but also and especially by covering products that generate forms such as poison, nail poisoned, etc ... The shape emits penetrating carrier wave, the wave surface being the vibration of poison responsible for the function of the unbalanced living cell. All natural magnetic beam emerging from the body gives rise to perpendicular planes which follow a number of times compared to the emission mass, these plans are self- same cut with other plans, so that the surrounding space is divided into cells

VIBRATION TEST DOWSING

L. Chaumery - A. OF Belizal

cubic, real harmonic chords the energy source that generates.

Study rays of pyramide.— If we ask a pyramid, facing north on a rosette of cardboard graduated 360 ° (Figure 37) we detect, using the "Universal Clock" two networks wave-flowing hearts, according to the length thread micrometric suspension:

1 A full electromagnetic spectrum, invariable, which follows the pyramid in its rotation around its center 0.

2 A natural spectrum, also complete, including the North-South axis coincides with the meridian magnetic point observation.

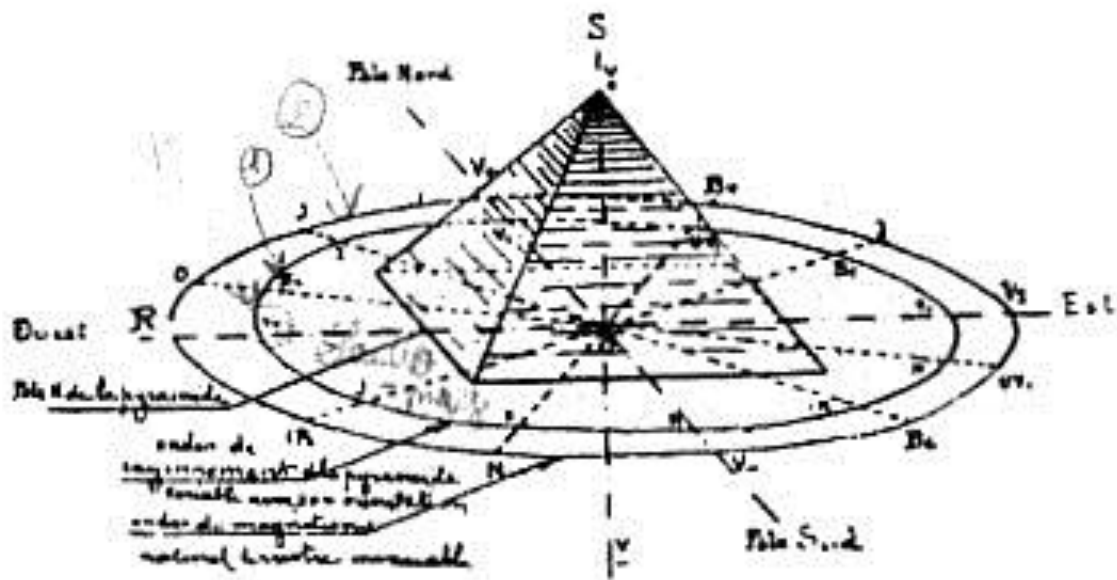

FIGURE 37.

Répartition des rayons-couleurs émis par une pyramide disposée face au Nord.

By aligning the V + electromagnetic waves with V + wave form, the two networks overlap color to color. If so, with the point of suspension, waveform, we rotate the pyramid of quarter or a fraction of circumference, we move all spectral axis network and V +, V-, no longer coincides with the axis of the pole N. magnetic. The gap thus formed reads in degrees on the rose and gives the angular measurement. This is, in our opinion, the explanation of dowsing compass presented in the first part. From the moment that the wave form coincides with the longitudinal axis of the ship, one can, with a pendulum, recognize the slip angle formed by the axis and the line N.-S.earth.

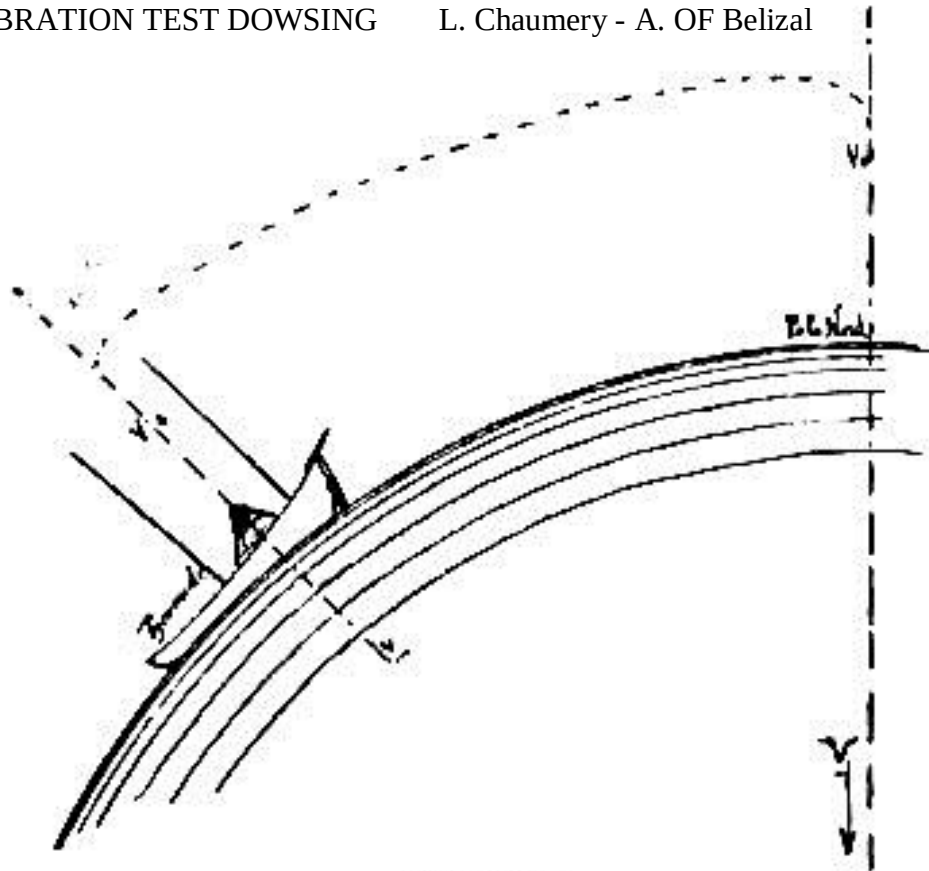

FIGURE 38.
Lieu d'union entre la pyramide du bateau et le pôle N. de la terre.

We put a pyramidal shape on the axis of the boat because the pendulum giving direction invariable our Lord, needs to meet its beat radioactive axis passing through the point O, true vertical antenna as well as the 'Our Lord antenna Earth (fiFigure 38). Plate Platform of the Great Pyramid. Its influence

. - In the construction of the Great Pyramid, it is a feature that has always intrigued scholars and all insiders who examined her secrets tight to the discover. Pyramide Why did she never finished until its tip? Indeed, its end is constituted, not by four terminal edges, but a platform about 6 meters wide, 36 square meters. If architects have voluntarily neglected the total completion, it is certainly to the major reasons and purposewell determined. This platform not it be a fictional prism vibrational wave descend vertically to the center base of the pyramid to play a specific role and calculated? (Figure 39). This vibration we feel bathe ceilingthe underground chamber, placed well below ground level and follows a vertical radiation between the tops of the angles formed by the outer coating and the ascending corridor.

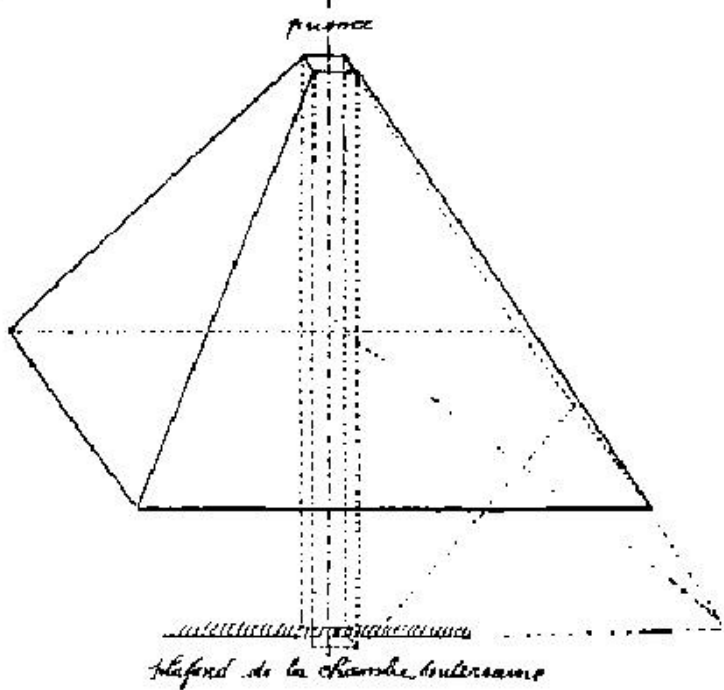

FIGURE 39.

Prisme vibratoire formé par la plate-forme de la Grande Pyramide et tel qu'il peut être détecté au pendule.

The King's Chamber in Outside of the central beam, this seems subtracted influence. What was the practical usefulness of this platform seems an anomaly construction? May be she had the property to capture cosmic rays to soak inside the pyramid, but this is only a hypothesis. It is understood that we have not completed the full study waves the pyramid has three perpendicular still radioactive plans, but this would exceed the limits we have set ourselves in this popular book.

Study of the decomposition of rays in a mummy

The art of Egyptian embalming seems to be coupled with a real dowsing art. The position of members of a mummy is invariable: feet touching, arms are folded over the height of the elbows, hands closed each rest on an opposite side of the body. Is this coincidence or convenience burial? No, it's definitely science, and science high degree of waves, because this form is passed through the body axis and in two perpendicular planes a radiation while helping to activate mummification, transforms the human body into a powerful wave transmitter. We reproduced in the different drawings of these magnetic transition rays in the plane and in the horizontal vertical plane, form a significant spectral decomposition pendulum.

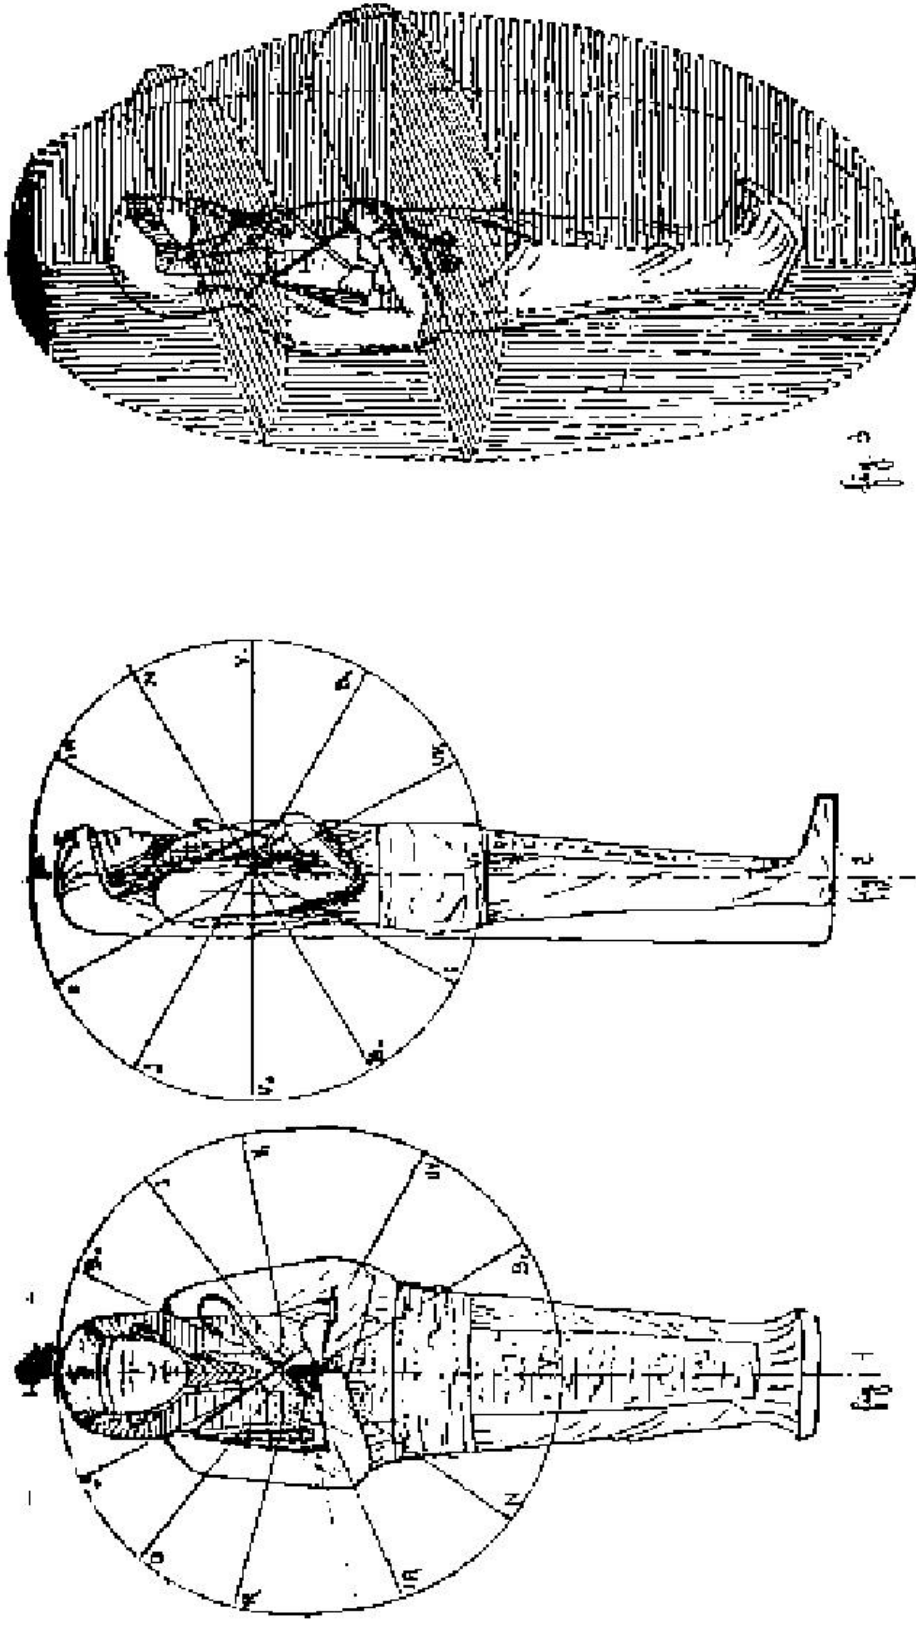

FIGURE 40.
Décomposition des rayons dans une momie. *Fig. 1* : vue de face. *Fig. 2* : vue de profil. *Fig. 3* : vue perspective d'ensemble.

In the figures face and profile, that is intentionally we have not reproduced in the eye, the third radioactive plan that also gives its decomposition-color to allow drawing any clarity. The perspective view schematically indicates this plane (Figure 40). In such a position, not just a mummy, but a living body, is a powerful transmitter wavelength capable of reversing the polarity of a detector, even equipped with a cell stabilizer. This is why we employee ons always this process power r rectify our clocks unruly pa r cause any. This proves that the human burials could be provided by the mummies themselves by enclosing in c ody at the time of the emba umement poison ve nin, aspecific point which is located outside the solar plexus (part indicated in black surie drawing), the point of intersection of two beamsmagnetic. Mummy, carrier wave, poison, oven range, this is a perfect resemblance to the harmful waves and waves natural diseases they carry. At the main defense of the tombs were added the rays emitted by some reasons such as frescoes uraeus which aligned in series, emits an extremely powerful and harmful wave. Statue of Easter Island

[Missing paragraph check on original please]

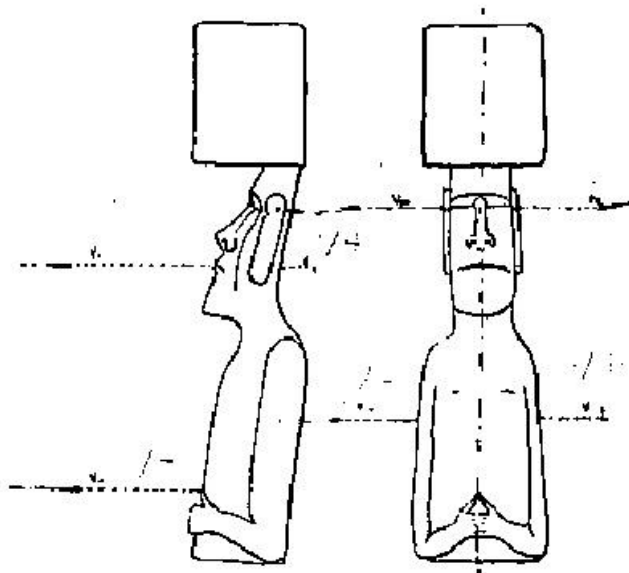

FIGURE 41.
Répartition des rayons $V+$ et $V-$ dans une statue de l'île de Pâques.

Sphinx

Sphinx, Egyptian like any event has a shape designed, issuing plans radioactive (Figure 42). We find these magnetic rays distributed in the attached drawing is : two horizontal planes, one vertical plane passing through the longitudinal axis, and finally two transverse axes giving the intersections of 3 shots up to the head and chest.

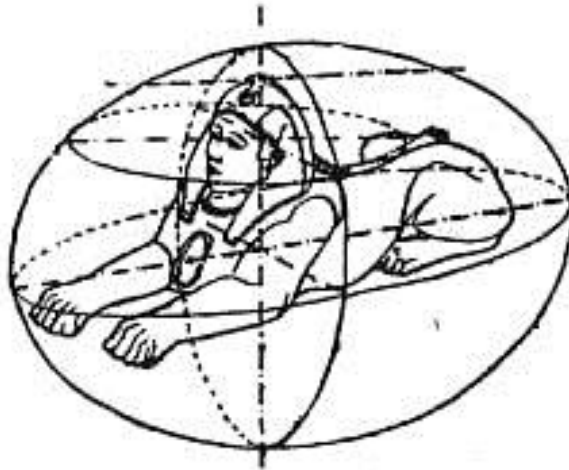

FIGURE 42.
Plans et rayons émis par un sphinx.

Pile dowsing. - Study rays

We will not dwell on the description of the hemispherical classic dowsing stack such that we invented and described above and which was at the origin of our research, but we now show that it is possible by changing the shape to obtain at will in voltage and current, the full range of the spectrum. In the hemisphere we did that ux ray: V + and V-. While keeping them, as carrier waves, we can, by changing the shapes, create a double balanced wave following the principle used by the Chinese as well as Yn-Yang in the Pa-Kua. To achieve these profiles we calculate av ons developed the detector" fictitious cone "described in Chapter VII of the second part of this book. We recall that this is a mass and a movable sliding rod in the ground. The position of this rod relativethe plate creates a cone whose diameter is fictitious fixed and variable height. The color value is read instantly on the graduated rod to both visible and invisible wavelength (Figure 34). principle of balanced dowsing battery will oppose two angles at the base and if one is determined to vibrate the red, the other will be calculated to vibrate on the purple (Figure 43). In. adding many elements it is possible to obtain extremely powerful rays. It is not necessary to me as battery is made of a solid material, homogeneous vacuum can also form stack and that is how we interpret the 4 cells overlooking the chamber of king of the pyramid of Cheops.

Remark. - We submit the reader a replica of a cell, shown here as an example, the surface was completely covered with a grid. This grid has the property to shield the radiation emitted by the stack, thuscan not be felt pendulum (figure 44). In other cells, Figure 43, the rays are very sensitive, they were calculated length 57

indicated, and any dowser with a "Universal Clock" can be detected

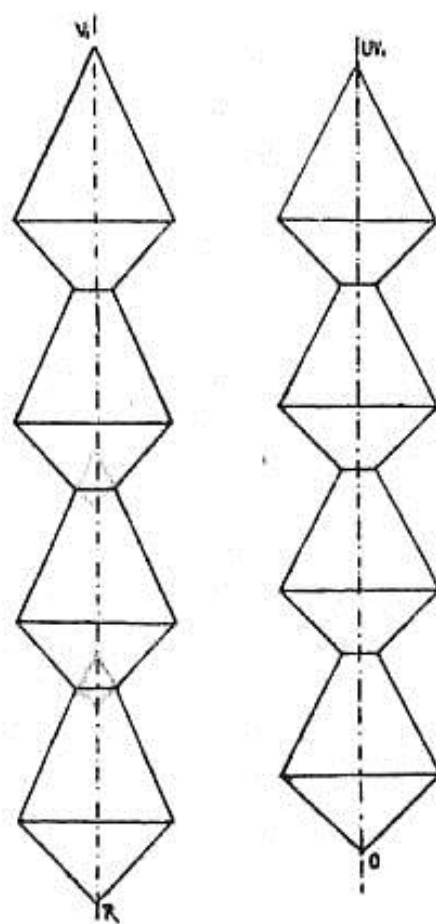

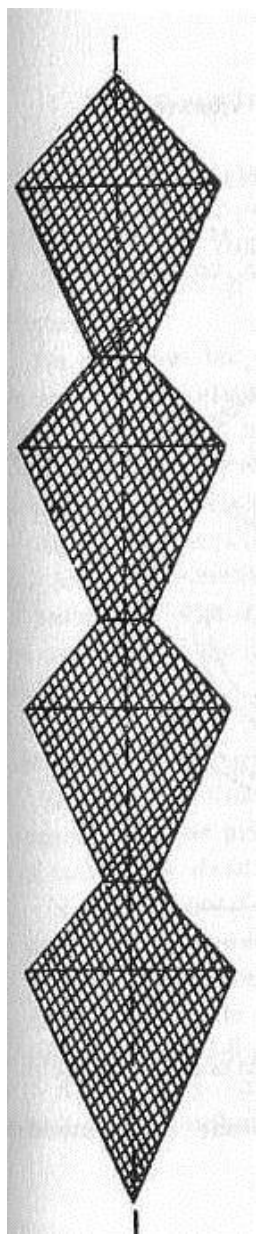

FIGURE 43.

FIGURE 44. Neutralization spokes of a grid cell

Seven-branched candelabrum

Candelabrum with seven branches. It has existed in antiquity and mainly in the Hebrew civilization candelabra 7 branches, reposan t on diamond shaped base.

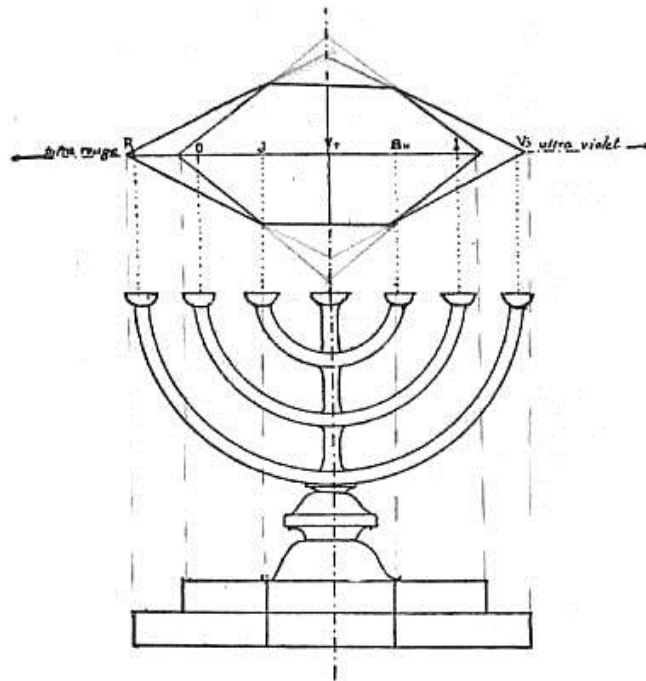

FIGURE 45.
Candélabre à sept branches, vu de face et en coupe.

The particularity of this candelabrum was issued, at the base of each candle, a vertical radius of color belonging, from red to purple, green at the center (Figure 45) . Turning on the seven candlesticks are obtained intensified radiation of the full spectrum, with the peculiarity that the combustion and heat engendered disintegration that had yet added to the vibratory power. If instead of 7 lights, there were only one or two, we got radiation and split-limited waves colors emitted by the position of these lights over the candelabra. This is the diamond-shaped base which gave it ownership of diffuse radiation. It consisted of two portions cropped and superimposed, in different proportions, giving the fact two unequal axes. Mr. Bovis, unconsciously perhaps, was inspired by issuing this form for his good biometry known, but without highlighting the spectral decomposition is very clear and represented by the attached drawing (Figure 45). To what purpose served the seven-branched candelabrum? Most likely a religious rite.

CHAPTER II

Dowsing MEDICAL

Wave disease. - Plans harmful. - Keys dowsing. - Officinal plants. -

Wave devices selectors: 1 Snail 2 ° Rule Yin-Yang.

Here we have a very limited right to look because the healing art should be exercised only by qualified doctors, it is an obvious truth that there is no need to dwell. It would be dangerous to others wanting to compete with Aesculapius without having done the necessary studies, both as regards the anatomy that the remedies now so numerous, and in the composition of which chemistry plays the biggest role. Do About we not in the age of specialties ... these specialties that the pharmacist on the sight of a prescription out of the shelf to re-Jacques, Peter or Paul? It seems that these formulaic suited to the first comer, so to obtain health, it is often not even necessary to have a prescription or see a doctor, the fourth newspaper page shows you the wonderful cures that will improve your condition or heal without fail, as have been the thousands of patients whose certificates are held at your disposal. Newspapers no longer sufficient for this raucous calls, TSF gets involved and is at the disposal of health manufacturers. All these medicines can they be taken with impunity, we do not believe and those that seem the same more harmless contribute more often haywire healths to the restore. It is a remedy to fulfill its ride, can not and should not be "omnibus s, each patient has his personal reaction that comes from its wavelength health, temperament, its deficiency state temporary or chronic. For a drug to act, it is absolutely obvious that it is measured and calculated according to the length of individual wave. On the other hand some diagnoses are sometimes wrong, not the doctor's fault, but often by the patient who claims to be affected organ such painful because, while this pain is, in some cases, the reflex of the neighboring organ, it is actually sick . To avoid these errors, some doctors, fervent followers dowsing, put this last contribution. They are morally in the right, they succeed or they fail, they conscientiously apply a new method that can be combined with their knowledge of medical. But if these doctors are moving towards this new branch of medicine, for against many other fighting it with energy and set themselves up as opponents of science they ignore the first word. should however be understood: this Dowsing medicine is true or false? If it is true, it must extend it deserves, it should even get into the program of the Faculty. If it is false, it must be prosecuted, sentenced, destroyed, public health is worth the effort. But assuming it is false it would still have to prove it and some failures are not sufficient to reject a priori a rich method promises. It is normal that there are failures, this is a young science where the unknowns abound, if the official medicine was her infallible, there should not be any sick and every body should die of old age. And then there there is no conflict even within this medicine? Some are for allopathy, homeopathy for other, some do not they go on to say that vaccines are injections and sometimes dangerous, not only ment for those who are thus treated, but also for the future of the race?

In all this, one fact remains: only the doctor is allowed to treat the dowser can not or can not do so unless acting under the control of the Faculty: thus it can only diagnose the following process, the doctor to check and indicate the remedy. The latter could however be controlled to ensure that the pendulum vibrates in good agreement with Body deficient.'s

following lines we would like to give our personal opinion on the current state of the medical dowsing.

A disease seen the pendulum as a disorder in the vibrational state of the patient. The wave of a person of a poor Health (scarce) does not look like a person with life.

Where locates affection? Is microbial or she is due to a temporary illness, chronic? Here the answer is given by the scale of wavelengths that is the severity of the disease. Some pendulists equipped with a strain-disease: a drop of blood, hair, stroke pencil, use them as a witness and explore with a peak antenna various designs of an anatomical organ. Detection detects when the diseased area. Success is often impressive that the dowser, thanks to the witness, vibrates according to the organs affected, however many causes of errors can occur if the operator does not take care of taking some basic precautions:

- 1 There is no need témoin has been touched by another person;*
- 2 detection should be in a place "Neutral." Indeed, harmful waves can counteract the effect of the pendulum, it is the same devices ray emitters dowsing, or some of the statues.*

Many people present at the time of detection also have the power to interfere with the operator and misleading. Moreover, a patient can sometimes be (and often) under the influence of harmful wave which he is impregnated or during his nightly rest, or the workplace. In this case, it follows very easily ride the wave offending through the body, and it affects all the organs are more or less achieved. This harmful wave before a Grand Sympathetic weakened puts the body impairment preparing and an environment conducive to disease field. Often, early light troubles, just move a little to disappear quickly malaise, and we could and restore the health of many people without, strictly speaking, medicine. But as we said earlier, the harmful waves not make you sick if the Grand Sympathetic refused to co-defender of the body, which is why people stand strong and support with ease. Others feel a little ache, some headaches attributed to fast food the day before or a cooling. Often a simple movement of the bed will put everything in order. Only the depressed, weakened, which is harmful wave with all its intensity, the body is no longer able to fight, dynamism is no longer strong enough having lost its reserves and is defeated in advance especially if patient remains under the influence of these waves that Chinese call "dragon veins". Drugs that could improve her condition can produce all their effects as they are upset by these harmful vibrations. In the chapter on terrestrial airwaves, we will present our theory of the Breaking Forces Wedges which is the Origin of most of our ills. Obviously cure for surely he must leave the field of harmful influences which too often negates the beneficial effect of drugs. Thereof, whether external or internal, always act through their vibrations. This is at least our view, it seems proved by the facts and the many experiences that we have delivered for over twenty

years.

Certain that it was the wave that was, we pushed even further our tests replacing the medicine of healing rays tuned and balanced. Patients subjected to the influence of these rays felt a often almost immediate benefit.

Bites or keys dowers

Since the vibration is by itself, we thought it would certainly be possible for us to use our Universal transmitter clock to reach the Grand Sympathetic and load a wave-healer calculated and balanced this by means of a rod-researcher points very precise body indicated by the detector. We say "indicated by the detector" because we noticed that there were on the body human patient, a significant number of sensitive pendulum points but turning is reversed. Simply touch these points with needle-researcher, and maintain the time required to turn the negative becomes positive turn. After a number of rounds, as soon as he has his tuning the "Pendulum Univ Ersel" slows its movement then begins to beat in our Lord directions and EW then stopped completely. can thus handle more sensitive points, one after the other. Pour_ rheumatism, for example, after a dozen keys, the patient feels an intense tingling in the part treated and the pain disappears within two or three hours. It should be noted that apart from the vibration emitted by the detector, the dowser sends the patient's vital fluid still forces the healer radius. There are basically transfusion of vitality. mechanism of dowsing key could it not be explained by excitation of Greater Pleasant at specific points where it is deficient (reverse turn) and thanks to the wave given projected through the PU This method would join the sympathicothérapie and Chinese acupuncture.

Officinal plants

It is claimed that some people who treat empirically by plants in the countryside, have various secrets, among others that of these herbs to pick the days and times given to enable them to have healing properties strengthened, eg at midnight when the full moon. Do not laugh at the antiquated customs, the secrets of the past are transmitted orally from father to son and traditions claim to tell that contains old. Not some truth has often talked about the influence of the moon on our planet, it's very apparent marked effect on tides, the periodicity of the woman it is said that some moons influence vegetation, that plants sown in a given period amounted rod that felled timber industry must be kept healthy to be cut following some moons. There must be in all this a truth and a part of exaggeration, if the moon comes into play is not only to exercise its influence, will also contribute the sun, the various planets, zodiac periods based fluid action on so-called "fixed" stars, the cosmos finally. Hence errors many that may occur and the influence factor relates only to the moon. To prove this astral impulses on everything lives we have the following two experiments:

1 We picked in the same time two different plants, controlled the clock, we were each given two vibrations: a Clean vibration, due to their kinds, and

b) A common vibration resulting astral influences that permeated both plants when they were cut;

2 We picked two. similar plants, but two different time intervals We realized:

a) A common characteristic wave both plants,

b) Two distinct waves which logically should be attributed to sending rays astral at the time of collection. If so plants such influences mysterious, it must be the same for humans.

So if the plants are these mysterious influences, it must be the same for humans. Astrology does not teach us that the child at birth, receives, when contact ceases with the mother, that is to say when it forms its own individual, separate, an astral impression he retained and will follow his life. This impression will give him a kind of trend, a particular character to be composed with other astral influences as we move forward in life. This however does not tend to deny free will, because each individual, by his will, will still be able to react against better or worse, this freedom. was willed by the Creator As for man, plant, at the moment when it is separated from the strain retains the waves that the permeated at this point with this difference, however, it can no longer react: for it is now immobility, it is fixed in this radiation that consists with that of its own. 's secret herbal medication would be to pick the latter when they are impregnated with the most high radioactivity astral. But before giving or prescribing a remedy, let us remember that the greatest obstacle to healing is permanent action harmful waves. The possibility of effective remedies is supposed partly destroyed by these opposing waves that affect the balance of the private human cell its beneficent action, the drug often canned, by cons, by its composition, the possibility of haywire or irritate certain organs: liver, stomach, intestine, etc ... and useful role becomes harmful. Its healing vibration which ultimately is the only one that counts is absorbed by harmful vibration ... Individual protection is possible? Assuming the matter resolved, this protection should, at any time and in any place, to oppose the harmful wave him off his radioactivity, which results prevent the wave vibrate and scope of escaping into the atmosphere. In our opinion it is essential to involve itself transmitter waveform calculated to remove this dangerous radioactivity. Can we not still find the origin amulets, gray gray, talismans whose mechanism is certainly ignored by those who wear them, figures and drawings with a dowsing pendulum can only be detected. These beneficial objects but sometimes some are harmful to others because the absorption power and that of diffusion is not the same for all individuals, which is why there are people who are "empty" in the crowd and thus are brought to unconsciously seek isolation, while others consist conversely, tend to mingle with their peers from which they draw their vitality which fault. Egyptian ankh appears to have been used in antiquity to preserve waves

harmful, temples, tombs, etc ..., was massive form and powerful, she was employed at the desired moment to take a contaminated area or stay a few moments. By against there were rings calibrated for human blood, which we have a copy and had to wear constantly.

Wave devices selectors:

1 Snail;

2 Rule the Yin-Yang

We saw earlier that the disease was detectable vibration-following spectral cycle, but this detection is very long by the "Universal Pendulum", we developed two small devices allowing instant identification of these waves health and the radius healer should be used.

L'Escargot.- The shape of this device recalls an Indian conch, which is why we named the "Snail" (Figure 46). It consists of a plywood material, fibrin, metal, etc. the significant matters little, since This form alone. Strain health is at the center and the wave is carried by the wave-color device, radioactive by its shape. The drawing that we attach to the description of this snail, representing all-color vibrations to exact points where they are located. It should be noted that any suitable remedy, placed in the extension of the radius Medicare and outside the snail, cancels the turning of the detector, the same medicine instead of witness gives the pendulum is turning inverse wave sickness. It is canceled by the remedy, it is sufficient for using the needle-researcher whose pivot is fixed at the center of the device, seek positive turn on the circumference (Figure 47).

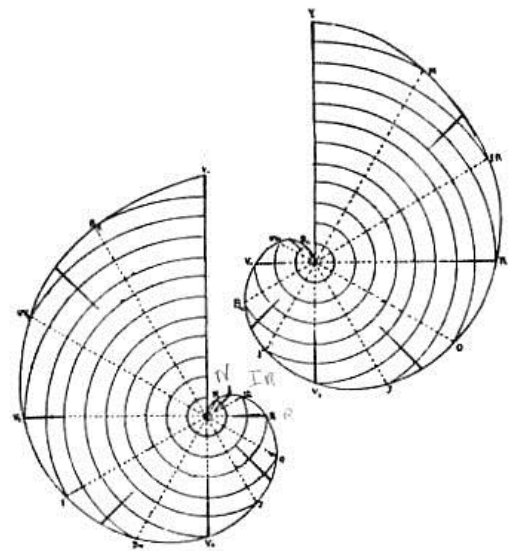

FIGURE 46.
Planchette escargot montrant la répartition des rayons
couleur sur ses deux faces.

The Rule Yin-Yang

- The second tool may be more complete than the previous one, consists of a ruler (calibrated in numbers up to 100 and also in wavelength), one of whose ends bears a movable metal disk, wherein were identified and engraved all vibration spectrum .

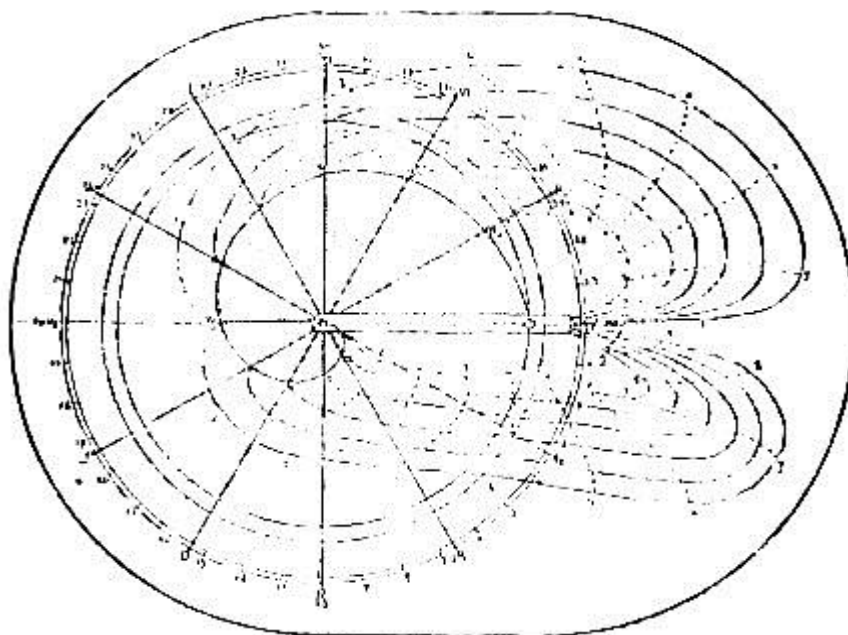

FIGURE 47.
Disque escargot perfectionné.

+ V In the position it can detect the vitality or deficient state of a patient. Simply place the control in the center of the disk and using a calorimeter detector shadow cone of the strip search on the verge of beating. . Example: 85/100 As the reader; 'report by the attached drawing (Figure 48), this device based st! on the principle ofYT Yang and we consider very valuable.

Remark.

- To highlight the action of the violet ray which seems well be an indication of a good balance of the human cell, we have established a very specific graph (Figure 49) whose legend accompanied the ntrawing explains k mechanism. radius If the healer is granted, we must always find the purple. Conversely, knowing the radius health, we automatically get the radius healer that can be administered to the patient in different forms: plants, allopathic remedies, homeopathic ethical, and even dowsing rays on site ordistance.

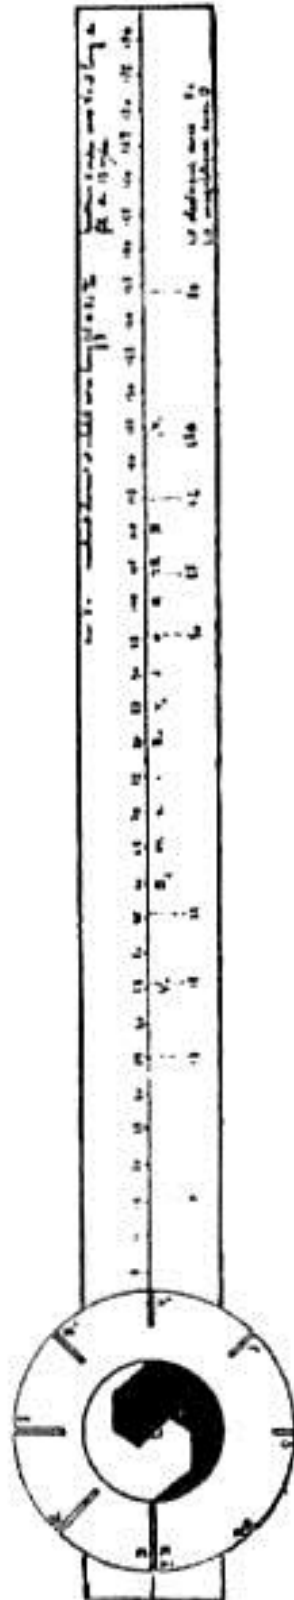

FIGURE 48.
Ruler Yin-Yang.

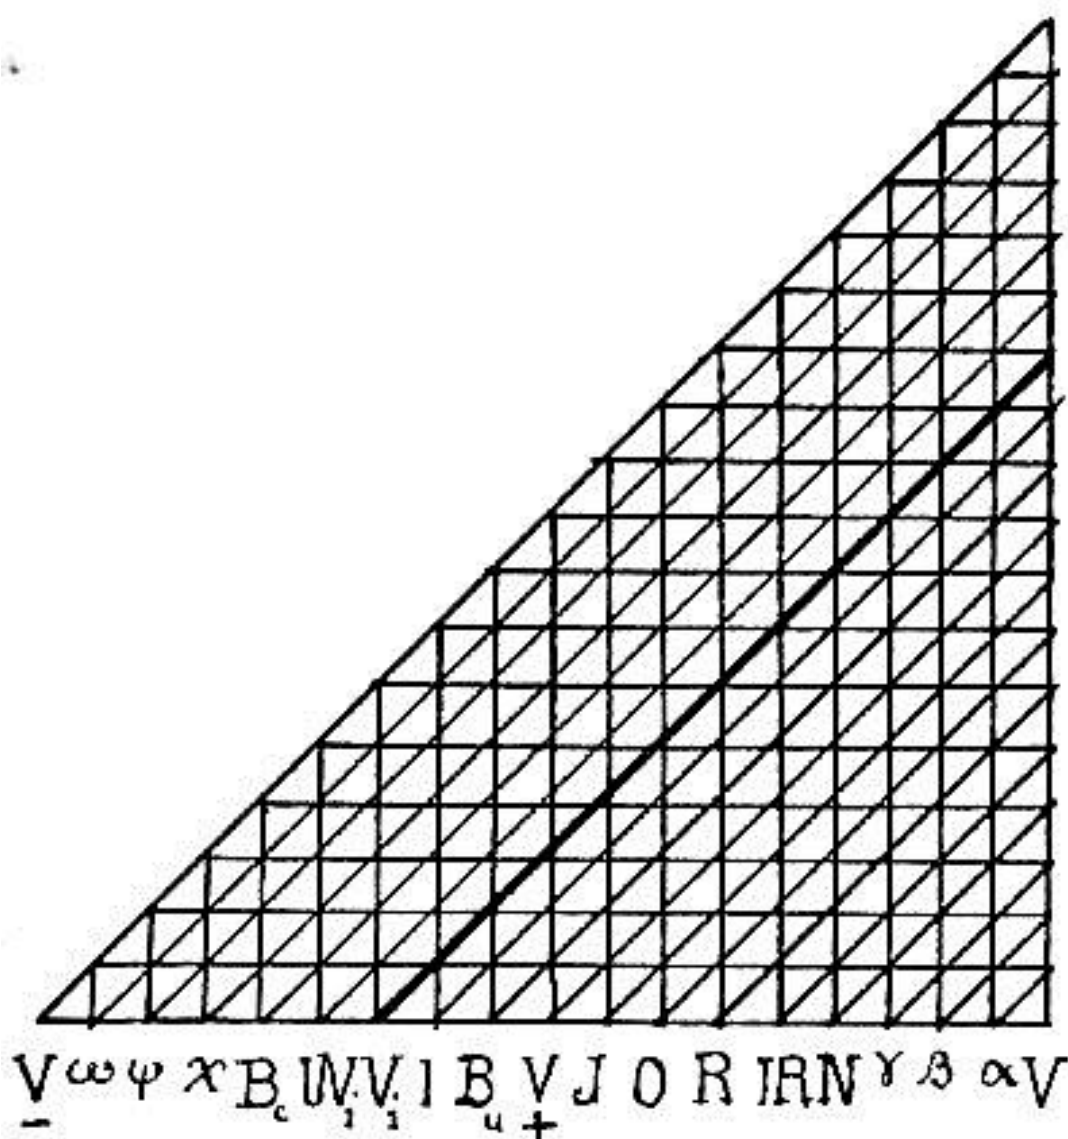

FIGURE 49.

Graphique donnant automatiquement l'onde de santé : soit le violet. Pour obtenir l'onde du violet, supposons les deux vibrations : jaune, onde-maladie, et blanc, onde-guérisseuse, qui sont à l'opposée sur le « Pendule Universel ».

On remarquera que l'ordonnée du Blanc, retranchée de celle du Jaune, aboutit au *trait gras*, sur la ligne du Violet, ligne de santé.

Autre exemple : Indigo, onde-maladie, Infra-rouge, onde-guérisseuse. La vibration Indigo rejoint à l'hypoténuse du triangle, la ligne à 90° qui conduit automatiquement au *trait gras* : Violet, onde de santé.

CHAPTER III

BEAM. - GREEN NEGATIVE

If we devote a special chapter to our negative green Is that we are aware of the importance of our discovery that goes back more than twenty years and may soon be used by official medicine. This mysterious radiation, an unsuspected power is not a single vibration, pure, but a beam of intense radioactive radiation, which extends from the infrarouge to ultra . Violet The diagram below shows the graph against the main vibrations (Figure 50) is: infrared, black, pure negative Green White ultra-violet. But, apart from these we have isolated other Radiation Side ts we lettered Greek: Between 1 and V-pureBlack: alfa, beta, gamma, 2 Between V-pure andwhite: chi, psi, Omega (Figure 51). exists an infinity of other intermediate vibrations, but if we confined ourselves to identify those named above, is that we recognized them, some at least, extraordinary healing powers, particularly in. cancer cases

tifier celles ci-dessus nommées, c'est que nous leur avons reconnu, à certaines tout au moins, des pouvoirs curatifs extraordinaires, en particulier dans les cas de cancer.

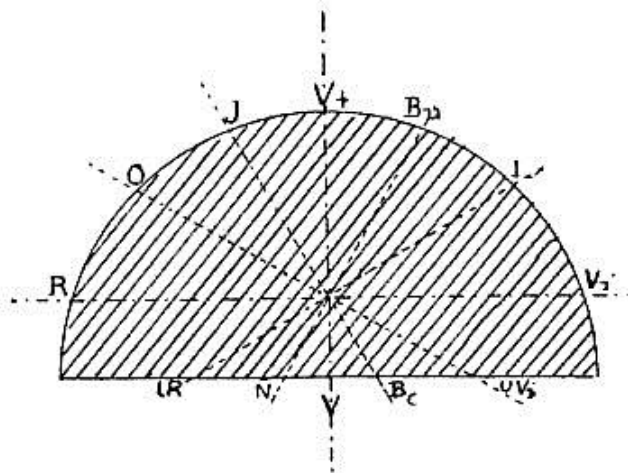

FIGURE 50.

Faisceau complet du rayon vert négatif tel qu'il s'échappe par le côté plat d'une demi-sphère.

V-pure mummified with prodigious power: meat, fish, eggs, flowers, etc... Doing it sterilizes and destroys microorganisms agents of putrefaction. It is not necessary that the action of this vibration lion occurs on site, all you need is a witness

(piece of meat) and submit it to the action of V-so that even remotely significant, sterilization takes place. Thus we have a way to mummify a remarkable piece of meat (which we had been sent a fragment as a witness) of Brittany in Paris. Since it is possible to sterilize even remotely a piece of meat It is also possible to mummify a cancerous tumor.

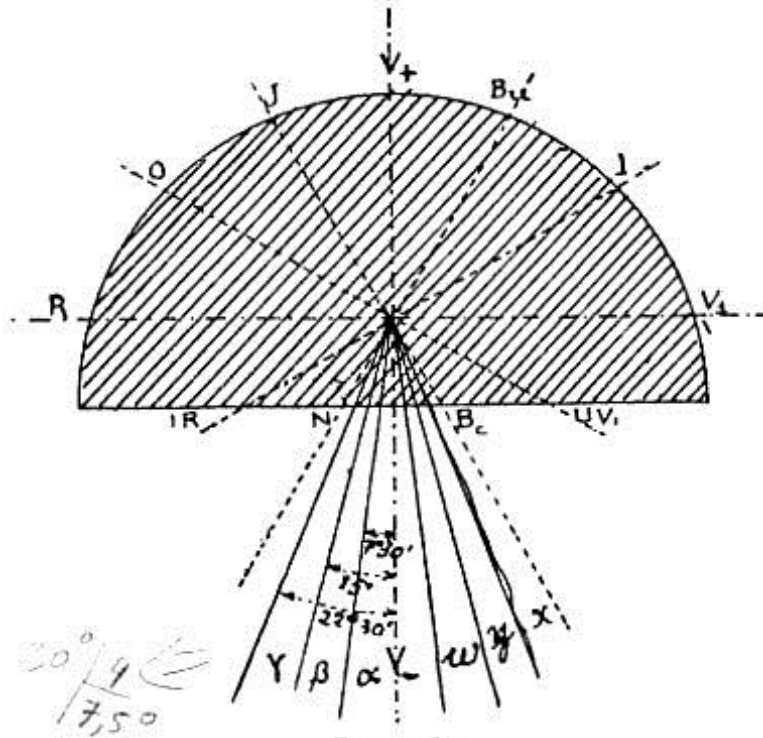

FIGURE 51.

Rayonnement du faisceau vert négatif, uniquement compris entre le Blanc et le Noir.

And if, instead of we use the V-pure, we issue alfa radius, then we get a healing vibration of the neoplasm. As the patient progresses to healing, this vibration beneficial tends to move away from V-pure and approaches the black. The rayon mummification is exceeded and we are in a sector whose powerful though invisible effects are fully curative. Since here we come to the question of cancer, however, we believe that healing it remains highly problematic when the No evil invaded metastasizing body but taken at its beginning all hopes are permitted. In the first case it is nevertheless the possibility to bombard the patient with pure V-mummified which all tissues and nerve centers, removes all suffering and prolong life a few months. This V-pure vibration is definitely the shortest wavelength but the most penetrating of the universe and its power is much greater than that of X-ray. It is possible, if one takes no precautions, to be achieved by burns that are reminiscent of radio dermies.

New discovery on Negative Green (V-)

This amazing discovery of V-which was done in collaboration with my good friend Leon Chaumery, circa 1932 was taken by me only in 1968, 11 years after the death of my colleague, and that's when I leaned over further experience this mysterious vibration, I could observe that she had two different frequencies: A pure magnetic frequency, vibration beneficial for excellence . This isa vibration OK, on a philosophical level, one that restores ill health, provided of course be rigoureusement tassayed. A pure electric frequency is harmful vibration and philosophically vibration MAL. It was she who destroys healths are and causes death by vibrational imbalance of the cell. For example, it is possible for me, and I do, kill a mature tree in one week in subjecting it to the action of the Green Negative (V) supply. Czech and Russian physicists now kill laboratory, and will, flies, worms, spiders, mosquitoes, etc ... by subjecting them to the action of aV electric pure. In 1974, reconstituted with my laboratory with large batteries and magnetic cosmic V-electric emitting via a shock wave transmitter, and having exposed to this radiation very sensitive emulsion films gamma they obtained absolute darkness, Time of exposure 88 h., emissions ray ons Roentgenmuch more intense than the pro dice classics. They named this radiation BELIZALOGRAMME. Reproduced either on the laboratory level, but on an industrial scale, with a radar emitting high intensity V-pure electric on a large scope, it would be possible to remove all life by dehydration in an entire sector swept by the vibration of death.

CHAPTER IV HARMFUL WAVES

Carrier waves, waves carried. - Rupture Forces Wedges. – Physics Device, Stabilizer Balance of Forces. - Kaolin to protect versus harmful radiations.

This natural phenomenon is more than ever on the agenda; denied by some, recognized by others, it is a constant subject of discussion or exchange of views that oppose them most. dowsers What is a harmful wave? What is the mechanism that allows it to vibrate? How it recognizes? These are questions that we would like in these pages bring some light based on rigorous logic and. a longstanding experience This long experience has shown us that vibration harmful elements consisted of two completely independent:

1 A carrier wave, V-beam, that is, the wavelength range dowsing, that wave radio is the modulated wave:

A wave range 2 ° on this vibrating carrier conveyed by it, having a length of clean wave that can synchronize with the full range of the spectrum and is comparable to the wavelength of the modulated TSF This is actually the wave sickness.

This vibration-V, even if it is not accompanied by the wave range is dangerous for the health rays penetrating it radiates too. When accompanied by a wave scope, which is usually the case, the harm is even greater since this vibration can create, on a ground prepared and lacking a favorable climate for the development of intense microbial flora, and do so with the time, damage to health sometimes irreparable. It is not even need to be under the direct action of these vibrations to suffer the harm, since we know that they emit harmonics on three levels, including action, although less virulent is however, sufficient to weaken the Grand Sympathique. If the wave can reach and attack the body of living beings, it owes to the radioactivity of the carrier wave V, but it can not escape from the ground and up in the atmosphere that the condition be on a "

breaking strengths offset

. " And here we are asked to explain this theory, we apologize few rehearsals deemed necessary for clarity of the subject. The following has already been the subject of a report to Congress International Dowsing in Paris in May 1954. According to us a harmful wave is unopposed Earth vibration fuse soil under the form of a carrier wave for itself support a range wave can be just the time for a vibration of water soiled, microbial emanation cemetery, sewer, river underground poorly drained, or radioactive dry stack fault forming as a result of different layers of ore in the ground. Throughout the land there are body can contribute by their magnetic field to destroy the state equilibrium of the living cell, but that can be harmful, it is essential that these vibrations déséquilibrantes find a support, a wave carrier. enabling them to

escape into the atmosphere . This carrier wave is negative green. playing in the ground even role in the radiowave ether, relative to the modulated wave. It brings with it all the destabilizing radiation which, without assistance, could not escape into the stratosphere. Some may say: "But then there should be everywhere harmful waves." Well no, thankfully, because for there to be harmful emissions, there must have rupture forces compensated. Most ills of humanity, and here we are not referring to diseases of epidemic origin, contagious, hereditary or secondary to accidental causes, but the born oplasmes to come 'elmstuberculosis, mental illness, depression nerve , rheumatism, liver impairment, cardiac, almost all of these evils for original natural harmful vibrations. For millennia in China example, it would never have come to the idea of anyone to build without having previously been a qualified specialist to determine the nature of the vibrations of the selected location and if that location happened to be on a "Grain Dragon "(c It is thus that the Chinese named the harmful waves), it was careful to build in this area. Nowadays in Europe, who cares about these invisible contingencies and yet so terrible? Yeah, so formidable is that 'Indeed, the human cell, animal and plant to grow, develop normally, running, aging and finally die, but die of old age and wear and not any disease, must, throughout its existence, vibrate in the balance of two forces:

1 One Telluric the Force comes from the center of the earth,

2 The other is the Cosmic Force of the Cosmos, our galaxy and our system .

solar cell While human, animal or plant, is in the balance of these two forces at least other secondary causes accidental, it is protected from all evils plaguing humanity, but if for any reason one of these two forces is to be lacking, and it is still Cosmic Force is rapidly imbalance causing the disease in its various forms, and that as soon as the Grand Sympathetic will flinch and no longer fulfill its role as defender of the body. L disease state therefore come from a vibrational imbalance caused by a "

rupture. of force offset

"And these only telluric waves are precisely these harmful areas, reported by all competent and serious dowrsers, evil vibrations that we always find in all tell "cancer houses" or disease, these lines of force, when he s 'is not current underground waters are sensible ment on a North-South or East-West route, but it is possible to detect sometimes as a sort of griffin or vertical climb well defined. would exist in notre knowledge, three methods to neutralize harmful waves: 1

A psychic process

. - This method is based on the appeal to the Higher Forces, call always listened when running, full awareness of his own nothingness, begins in the state of mind necessary for the success of such an operation. Doing so it touches the Cosmic Forces failing and allows, for his intervention, the return to equilibrium

Forces offset s.

We know this invisible action unseen forces can be challenged by spirits surface for which only have concrete facts and data of a problem solved mathematically in terms of physics, chemistry or biology, and yet

evidence is there, convincing, irrefutable wherever the balance of power has been restored, it was a marked improvement of health, as well as respect to humans and animals, and in cases of cancers advanced, the patient continues to suffer and gently off. As evidence of this psychic action, the detector had detected wave by turning violent negative, remains inert at the. successful operation Next measurements made in a particular case, we can say that the protection of a building extends in the form of an ellipse having the following dimensions: 70 meters in the direction N. -S. and 45 meters in the direction EO. 2

A physical process: Since it was recognized that harmful vibration came from a Out Forces Wedges It was logical to design a device which by its power transceiver, restore the balance of power, and thereby remove the radioactivity. This offset radioactivity wave range can not find support in the ROUTING nt travers soil and space. This device is constituted very simply by two identical shapes, made of wood or metal, which slide on one another and whose relative displacement cancels radioactivity telluric wave, even if neutralizing is not placed vertically in harmful emissions. Its scope is broad enough to protect the surface of a means building (Figure 52). Note, however, that the offset of the two parts in contact must be calculated exactly following the vibrational wave power harmful. In the case of an incorrect setting device becoming radioactive generates harmful secondary vibration harmful to the health.

3 Natural Process: Kaolin, screen protector. - We noticed a clay subsoil of a certain density formed a powerful and stable shield against the influence of unbalancing the harmful wave, but when the clay layer is neither constant nor sufficient, radioactive vibration password anyway and this would explain some mounted very localized wave. After many experiments, we are confident that contaminated home can be made safe by a stiff coating, and as the cellar floor, a layer of kaolin to about 20 cm thick. After setting this state, it is no longer possible to find traces of harmful vibration, except in the walls, the inwardly is absolute protection. The radioactivity removed, the wave cosmic can swim again largely of its beneficial radiation the area previously unbalanced by breaking Forces. Such is our opinion on natural harmful waves, on the other that can be called artificial because manufactured and calculated that if their action is more veiled it is no less dangerous and degree of harm depends on their shape, their mass and their material; she is also poisonous products that come in purpose in the composition of these issuers wave. The activity of these statues, buddha, sphinx etc ... is variable depending on whether they are in neutral ground or harmful area. In the latter case there is an induction phenomenon just reinforce their action, that is how we found a reproduction statue Island Easter 35 cm caused, after three days, an operation scar dating 17 years of pain and intolerable itching. These disappeared in one night, the statue was transported out of the dwelling. His action had a radius of about 4 meters in Slots time it bothered the person subject to these conditions, it mummified piece of meat perfectly.

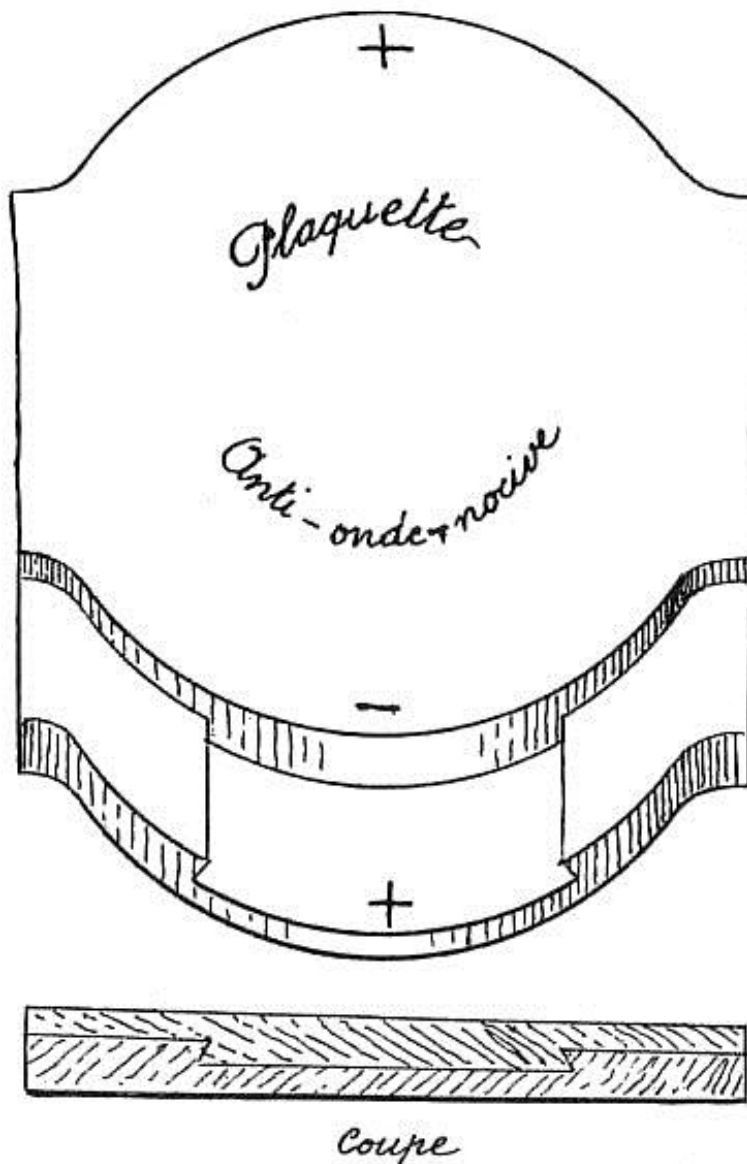

FIGURE 52.
Plaque stabilisatrice de l'équilibre des Forces :
anti-ondes nocives.

There is a new device, set developed in 1966, the model was introduced, which has the property restore the balance of forces in a house subject to Ruptures That is why it was designated as the Rebalancer.

Principle, physics, falls wave form. It has the property to attract cosmic waves positive so that they come again bombard the negative telluric waves, which restores balance offset strengths. This wave magic Form was discovered in a sarcophagus of the Valley of the Kings during excavations in Egypt there are some 150 years. Well placed in the magnetic field, its effectiveness is positive 100%. Wherever the unit is in operation in a contaminated house subject rupture strength, health is restored and a joy of life reborn.

CHAPTER V THEORY

GREAT CURRENT MAGNETIC *IN SEARCH OF LIVING WATER*

The problem of water

If a problem is a burning issue, which is that of water. Water this essential element, capital, essential to life, and without which our planet would be a huge desert like the Gobi, Sahara, or as the Moon. The human body itself does not it contains 80% water: a swift and brutal dehydration, especially among young children, causes the most . often death Presently, with a growing population whose curve log is somewhat disturbing, in a consumer society to comfort always phis refined and demanding the water needs become a problem allforeground, in front of which the governments and municipalities are overwhelmed. then attempt to satisfy the most urgent needs, more immediate, it drains all surface waters, streams, polluted streams, rivers irrigating even large cities, whose waters spooof all the rubbish and waste cities, when it is not sewage or productschemical pollutants from industries upstream. Obviously these polluted water, contaminated, microbial, are not delivered as such to the consumer. It must first of all proceed with the construction of dams to detain them, the "water tower" of treatment plants to obtain a neutral water called "safe" bleach, pasteurized, all but dead never to taste more or less dubious if not terrible, not that can be used for cooking and livestock watering, but not as water table. As companies exploiting mineral waters (which are notsurface water, but water depth) Have beautiful game to develop their industry. Bottled water are sold at low prices now not only in supermarkets, but in any grocery store in the village. It is the triumph of the water table in plastic bottles because it would not come to anyone thinking of cool tap water to the service that is provided by the Compagnie Générale des Eaux in France who holds a true monopoly, as well as gas or electricity. Yet if these mineral waters ""Are biologically sound, in theory, they do agree, however, not all organizations because containing outstanding minerals in excess, can harm certain temperaments.

VIBRATION TEST DOWSING L. Chaumery - A. OF Belizal

Professor Louis-Claude Vincent, following severe bioelectronic analysis indicates the mineral content of certain thermal waters:

Vichy (bi-carbonate, sodium) ..4 g. of salt in a liter

Badoit (bi-carbonate, sodium) ..2 g.

-Contrex (calcium sulphate) water to plaster 1.7 g.

-Vittel GS (sulfated calcium) 1 g

-Ferrier (carbonated calcium).0.6 g

.-Evian (carbonated calcium).0.5 g.

Consequences for the organization: these waters are entartrantes (mineral deposits in tissues, joints and arteries phase blood oxidized) and the fhas, thrombosiques and carcinogenic. The only mineral salts assimilable by the human body, are those organic origin, that is to say from plants, animals or animal by-products (eggs, milk, butter, etc ...). Otherwise, the blood thickens and becomes alkaline instead of remaining acid. This opens the door to all the thrombosaires diseases, arteriosclerosis clogging arteries, etc.. The body can not use as minerals that have been metabolized by plant life. All hard water are rejected as harmful, so that ea ux source granitic or volcanic s (Volvic, in Auvergne, and Katell Roc Lisio, Brittany), is highly advisable because chemically pure and without. against any medical indication- In reading the above, the reader may be tempted to think: the earth will therefore running out of drinking water because, firstly polluted waters are to be rejected and that of Secondly, the waters of Companies distribution, even in the regenerated plants sewage, are dead water , nuked in chlorine, unfit c ike watertable. Moreover, mineral waters, as indicated above, are for use with most large reserves, not risking calcify the body. The world situation, in which cc H2O concerns, given the current and future needs would be most alarming, and this despite the desalting sea freshwater, whose cost is also prohibitive. In addition, the desalinated seawater has become a dead water, neutral course, but not having the energy value of untreated water and living sea.

Large magnetic currents

Fortunately, a breakthrough has been made, there are a few years and experienced both in France, Belgium, Italy, Malta, Pantelleria, the Balearic Islands, Spain and always with equal success. This discovery puts our planet safe from any water problem, especially pure water and LIVING, and is the law Basic: The earth is a living lie as men being. It has arteries, arterioles, the veins, veinlets, and all his blood, life principle, is a pulse motor, the heart, to return to the same motor, and after being purified oxygenated in the lungs. Well, it is the same for the land, but instead of carrying blood it conveys H2O. Like humans, it has its arteries, arterioles his, his veins, his veins and all that pulsed water LIVING two hearts back to these two hearts after purify themselves in the lungs of the Cosmos. As humans, it is a closed circuit. remained to discover the two hearts that pulsate LIVING water and this is where the discovery

comes into its own: the two hearts of the earth, these are the two poles Arctic and Antarctic: the northern and southern poles of these two large arteries leaving MAGNETIC of LIVING water going to reach the equator, where they feed Tropical Rivers and the water pumped partly by the sun, vaporize themselves in the lungs of Cosmos, then fall into living water to two poles in the form of snow and ice. This is a closed circuit, inexhaustible, of pure water and ALIVE (I répète) because responsible for cosmic rays: Just as the human body can not fail to bleed, and the earth may run out of water and he just drilled on magnetic arteries to bring forth. These surround the entire planet as a whole thread around a balloon, and it is very possible to map the route of the arteries throughout the globe. They are located some 20 km from each other, and it is on which they are connected veins and veinlets that they are not subjected to the magnetic field: these are all sources fuel our campaigns by providing life. And if these arteries can vary in their path as they consist of ducts invisible radiation submitted to Earth's magnetic field used to convey the rivers underground until the reach of the equator, by course may vary in depth, depending on the nature and profile of the land under which they cheminate. Any wooded hill above all, the whole mountain is for magnetic artery flowing deep beneath this profile genuine natural pump that draws water from the artery, capillary, and often go back to less than 50 meters from ground level. These natural pumps used to supply water source Every veins of our campaigns. Here, there is more magnetic field and the water pumped into the arteries follows the profile of the terrain and slopes in all directions. These are all the wells which we find in our villages, but with water from all ways, the origin of all magnetic eras. How average depth in the earth, flowing these arteries? Experience has shown that it must be between 180 to 250 meters on the ground at normal altitude, but in the highlands the depth of the artery can reach 350 meters. flow is extremely important but can vary depending on the nature of drilling, as was done in the center of the artery or edges. This rate variation plays on values of the order of 60,000 to 80,000 liters / hour, up to 250,000 liters / hour, without the water level drops in the borehole. This water is of extraordinary purity and pressure from the hubs tends it is back in the borehole 50 a few meters from the ground and remains there regardless of the amount drawn. When the artery is on its way a geological fault, a fireplace in which water can rise by natural pressure, which sometimes springs into the open air and it is the explanation of all wells artesian. Throughout the Mediterranean, the former perfectly aware of the existence of all these streams of water and this, even the smallest underground streams. But perhaps they were unaware that these currents came from arteries begin to magnetic north and south poles, true hearts pulsating the LIVING water in all directions, that is to say LIFE. To report the presence of the groundwater they used, and they always have, to put on the dry stone walls surrounding fields, three stones, two extremes indicating the width of the stream and the middle, the center. And the angular center stone is accurately directed in the flow direction of water.

Yes, in the Mediterranean basin, and stones placed on the muretins dry stone speak to the intelligence and one would be tempted to say: "When the stones speak, streams sing ." It is only know to hold a hazel wand between his fingers, to realize the reality of the thing.

SOME RESEARCH EXPERIENCE

Some readers would probably be interested to know exactly the detection process of the Great Magnetic Currents. However, we traveled all over Italy from north to south and everywhere we passed arteries water LIVE from the Adriatic generally very shallow and whose basement, at a certain level consists of impermeable clay in which water circulates LIVE arteries. Going back to the north we find these Dalmatia, Yugoslavia, Austria, Poland, Siberia, Lithuania and the Arctic Circle. These arteries through Italy from side to side in the northeast-southwest direction. One that goes under the island of Capri (given that the island is composed of two mountains rising from the sea separated by a neck), running 750 meters under the collar, or some 450 meters below sea level, but find arteries LIVING water, inexhaustible, is one thing, getting the drilling of a well on one of these arteries is another thing, because at this time, we are faced private interests powerful that it is not possible to 'break. For Capri, for example, the island is replenished water drinking by tankers that carry the precious liquid from the mainland and this three times a week. This water is stored in huge tanks and then pumped under pressure to the towns of Capri and Anacapri. This is a virtual monopoly which nobody has the right of touch, because if drilling ensured the independence of the island drinking water, would finished profits that ensures the Company replenishing this pearl of the Gulf of Naples: in two words, it would be bankrupt. artery passes under Capri, we find in Sicily and Malta before reaching the coast African to Tripoli. island of Malta is not very well supplied with drinking water because the arteries in all of the island, have sulfur and brackish water unfit for consumption and the recent government of the island was placed under the UNESCO protection for all affecting drilling, which can not be with his authorization. Again and always monopoly ... the Balearic Islands, there is a beautiful island Ibiza, a small paradise with five arteries - an area 48 kilometers long and 25 kilometers wide. There it is possible to drill wells and water inexhaustible and LIVE for the comfort of the population and its vacationers. A case among thousands: there is a farm six hectares, Can-Toni, near Santa Eulalia; gold, on this farm with a dwelling house had been abandoned, three wells had already been dug 80 meters deep but without success, because dug out veins or arteries. Sounded for exploration, we mean a point specific to a width of 20 meters where passes a large vein taking on an artery to the west. We show a depth of 140 meters and upwelling stabilized at less than 50 meters from ground level. drilling is at 147 meters, the water is at the rendezvous and recovery stabilizes at 47 meters from the level soil, a volume of more than 100 meters of water in the borehole. Equipped with a 35 hp engine with submerged 80 meters deep pump, drilling debit of 1967 lince a water volume of 40,000 liters / hour, 24 hours 24 without the water level drop in the drilling. drilling This was done not on an artery, but on a large vein (artery passes to the west) in a property owned by Ms. Martell. The volume of water is so important that the owner sells all its excess water to nearby hotels in the region Portinax, which passes the magnetic artery. In Spain, north of Valencia, in a "big of Spain "related to the royal family

with a culture of some 200,000 plants orange, drilling on an artery has solved the problem of irrigation planting at a rate of 240,000 liters / hour without falling water in the borehole. Here again the miracle of the great magnetic currents. In Belgium, south of Brussels, Wallonia and Flanders border, the owner of land would create an artificial pond. Heaven was with him since his field was located on an artesian artery, so that water gushed out, and the game of the slopes, the lake was as fed directly without pumping, and inexhaustibly . Always the miracle of mainstream magnetic. In France, in the Aveyron, on the Larzac plateau, in a property of 300 hectares crossed by a magnetic artery 250 meters in width, we find a point of giving drilling 315 meters depth, flow about 300 m³/hr. Comparable results were also obtained recently in South Africa and Japan. When we consider that there are water arteries. living every 10 or 20 kilometers, which poles descend not to reach the equator, it is astonishing to hear that soon the earth will run out of water and that this water is essential to life, is only collected in water surface and microbial polluted, while circulating around in the bowels of the earth water ALIVE, inexhaustible.

CHAPTER VI

TELERADIESTHÉSIE

Rather contentious issue, despite the impressive success of some dowsers, but the complete denial of this possibility is more rare. And yet, at first glance, everything here seems incomprehensible how a plan, even rigorously established identically oriented with its subject, Fulani it vibrate in unison with it? When it is a test photo, the mind can even conceive that there is exact identity, possibility for the purpose of passing, in addition to the light and the dark, the radiation of Object it then forward the plate, but in a drawing can not be grasped by a transmission wavelength light game. Here is a geometric question, compass, ruler and square have only plotted the data points, separately, dimensions prev wheels; eye even dowser has also acted twice. It is difficult to imagine a radiation recorded in the eye of the designer and field then postponed, after a longer or shorter time, on a sheet of paper. This is why some people believe in dowsing link yet between an absolute geometric design and reality. For those who admit the possibility of phenomenon, the image or plan is a kind of screen through which the téléradiesthésiste actually see the object as if it had before. This may be true when it comes to mental method, the brain is so powerful that it can interpret his imaginative faculties and set their vibrations lions on a sheet of paper. In our method we have to deliberately eliminated the psychic action, we will try to give a real link unit level and field. It will not be a demo, but we will see if objectively and, after many experiments, this finding is recognized true, the reality is téléradiesthésique be proven regardless the mechanism. It will not however believe in the infallibility of the téléradiesthésie there and there will always be an error Dukes percentage external causes poorly known, as it abounds in all emerging science. Here is the detection of a plane in a room subject to harmful waves which by composition waves, give a false solution, then vacuum or issuing form, located in the room, the sensor will panic . Therefore, before starting a study plan, we seek, as far as possible, to "neutralize" the disturbing influences which disturb our detection. Certainty of téléradiesthésie was given to us when we discovered the relay: an accumulator having been responsible for a wave-cure and placed on the floorplan of a patient, at a specific location, we check on the spot, sending the healing ray that was perfectly detected despite the distance. The wave vibrating beam and was not simply a point, line, this projection seemed larger in proportion to the reality from the plane. interposed person, not educated in our experience, but having in hand a detector tuned to ray emitted, eliminated auto suggestion always possible. After many experiences in this field we affirm the reality of Dowsing relay. téléradiesthésie Other evidence: We have 450 kilometers away permeated the garden of Mr. Lacroix at Henri a silver wave was detected at the exact location of his friend Mr. Chalançon ignoring the experiment in progress. Quite recently we have completely sterilized a piece of meat Brittany Sucy- en-Brie, near Paris. A piece-witness we had been sent by post, it was immediately bombarded by shock waves big intensity, and less than a week later the piece 'meat on which the plot-witness had been taken, was completely mummified and rendered rot

All this leads us to the conclusion of an absolute identity between map and terrain, but also between two elements from the same strain and it sSimilar have two inversely acting one on the other by CW beats. It may be that we had the perception of téléradiesthésie sensitivity of our detectors, perception may be difficult to feel with ordinary clocks unless verygifted. At the moment, apart from the law of similars we say we do not want to take a position on the mysterious detection mechanism on a map, we see just a relationship of cause and effect, the explanation will come later when the science of waves will be safer itself. Dowsing The diagnosis of anatomical chart n already surprised many people, not to mention the doctors themselves, it is the branch ofmost exciting of téléradiesthésie.

Sign conclusión

Here is submitted to the reader the results of our observations, we tried to classify a rational way around so that the layback in easier and more attractive. Should not believe that we have said everything in these few pages, this book is rather a plan. research in a new way of dowsing. We have only a few gaps and very weak in this part of the invisible in this field waves that tomorrow will to men the most surprising discoveries. What we have done is absolutely disinterested, our work has had one goal: to advance dowsing trying to rise to the level of a science. It may be that in our work have slipped some mistakes, surprisingly, we would be surprised us own it otherwise. Man is not universal ... like the pendulum, as we ask the indulgence of those who judge these pages.
