INTRODUCTION

Welcome to the *Universal Vibrational Spectrum* online training!

This is the second class in the series of three classes, which comprise the full *Vibrational Testing and Healing* series.

In the first class in this series *The Personal Wavelength*, you learned a number of important skills, including:

- * How to Clear the Mind and Energy Field before beginning Vibrational Testing.
- * How to Test Energy Fields accurately using Vibrational Radiesthesia, whether in Person or at a Distance using Witnesses.
- * How to Detect the Polarities present on any object or living being.
- * How to Test the Strengthening or Weakening effect of any Material or Vibration on any living being.
- * How to Identify the exact Focal Point of any Energetic Disturbance in the Physical or Subtle Bodies of a Person, and how to determine what will balance and correct that disturbance.
- * How to use Samples of any Material or Vibration to determine the presence or absence of these within any body, material, or location; this includes finding hidden materials within a body or in the Earth.

In this second class in the series, you will learn to detect and identify the full range of Vibrations present within the invisible world of Energy which surrounds us. As will be described in this course, the breakthrough discovery of the Universal Vibrational Spectrum was accomplished by leading researchers of the French school of Physical Radiesthesia between 1930 and 1940.

The information and techniques in this course have been clarified and simplified from their often confusing presentation in the written works of the French School. I have also added new precise details regarding the inherent powers and functions of each Band within the Spectrum, which were not described in the original French research.

This Vibrational Testing and Healing series provides the foundation for all of the Vibrational Healing Science trainings offered by the Vesica Institute. This series provides you with practical skills to detect and apply the complete range of invisible vibrations which create and sustain all life in the physical world. Our future trainings in Vibrational Healing Science will focus on practical applications of the vibrations of Naturem including those contained within Crystals, Plants, Essential Oils, etc.

The work of the Vesica Institute is based on two essential areas of Holistic Health: Spiritual Science and Vibrational Healing Science. You will find that the skills you learn in our Vibrational trainings support in many ways the information and practices contained in the Spiritual Science courses. For example, the practices you learn in this class will allow you test the exact vibrational forces created by any Spiritual practice, or

even to identify the nature of non-physical spiritual beings by the vibrational “trail” they leave behind when they pass through the energy field of people or locations.

Thank you my friends, for joining us in these trainings.

It is your support which allows us to conduct our research, and to offer practical trainings in these important areas of Holistic Health and Self-Development.

Many Blessings,
Robert J. Gilbert Ph.D.

DISCLAIMER

The Vibrational paradigm which this series is based upon is common to all traditional healing systems around the world. They describe the existence of a Life Force (Chi, Ki, Prana, Ether, etc.) which is what animates and determines the condition of all living beings. This Life Force is a vital energy which is itself part of an invisible spiritual and vibrational world which surrounds us and affects every aspect of the world around us.

However Modern Science and Medicine, especially in the Western world today, completely dismiss all classical concepts of Vital Energy and Life Force. They focus only on physical, mechanical references.

This class provides access to historical methods of holistic testing and energy balancing which are based on concepts of Vital Energy. Accordingly, nothing in this class will be considered as valid by the standards of modern reductionist Science or Medicine, nor do we make any claims related to their concepts of “health care” or in any way seek their approval or support.

This class is for the millions of people interested in their own holistic exploration of dynamic energy and vibration, outside of the boundaries set by reductionist science and medicine.

- * All methods in this class are for your personal exploration only. User assumes all responsibility for their exploration of these methods and concepts.
- * This course features descriptions of historical methods of energetic analysis and healing. Any health-related statements given in the text are accurate historical descriptions of terms and concepts used by the researchers described -- no medical claims whatsoever are made or inferred for these methods. All methods described are based on classical concepts of vital life force and healing, which are not accepted in modern science or medicine.
- * Neither Robert J. Gilbert Ph.D. nor any employee of the Vesica Institute are licensed Medical Doctors. We do not diagnose nor treat any illness, nor can we respond to any questions from the public regarding medical diagnosis nor treatment.
- * Never interfere with the Medical Care being provided to any person.
Always follow the advice of the health care professional you trust, and never put yourself or another person in any danger through these methods!

ACKNOWLEDGEMENTS

The discovery and applications of the Universal Vibrational Spectrum have very deep roots, which go back to ancient spiritual traditions. This knowledge of the invisible Divine Vibrations which create and sustain our world is a living spiritual flame, carried by many different Initiates throughout history.

Only in the last 100 years has this hidden Initiation knowledge manifested publicly into the precise science and techniques you will learn in this training.

First and foremost, my heartfelt thanks to my teacher who introduced me to French Radiesthesia, the remarkable Dr. Ibrahim Karim from Cairo Egypt. In addition to teaching me the foundations of French Radiesthesia, Dr. Karim also allowed me to become the first person outside of Egypt authorized to teach his new system of BioGeometry®. Dr. Karim has made the French work accessible to a new generation of seekers, along with the addition of breakthrough new discoveries including methods to detect and apply the BG3® (the Universal Centering Vibration.)

To Christopher Hills, who introduced French Radiesthesia to North America in the 1970's, and whose extensive library of rare texts became the foundation of our collection at the Vesica Institute through the help of his widow, Penny Slinger Hills.

To Jane Weaver, who translated many of the most essential French Radiesthesia texts into English for the first time, providing essential reference material for our research.

To the many friends and helpers of the Vesica Institute, who have supported us in developing our new research and trainings in Spiritual and Vibrational Sciences. It is your help which has allowed us to now make this work available.

To the lineage of Initiates into the Invisible Vibrational World from around the world, and across time. They exist in every area of the globe, and in every tradition.

To the "Masters of the Net" of the Ancient Egyptian Temple Science and those in the Middle East and Europe who carried the flame into modern times.

To the hidden Masters of the Rosicrucian Vibrational Science, including the great leaders St. John the Divine and Rudolf Steiner.

To the French Catholic Priests who chose to reveal their Radiesthesia knowledge in written texts in the early 1900's, making this knowledge available to the general public for the first time in history.

To the great Vibrational Researchers of French Radiesthesia -- Turenne, Chaumery, de Belizal, Scariatin and so many others -- who created the foundation of a modern

Vibrational Science, and created the original insights into the Universal Vibrational Spectrum.

I hope this training will help to preserve -- and to spread -- the knowledge and techniques of this great tradition.

The methods provided in this course can help to ease suffering in the world, so please find ways to use them to help yourself and others,

Remember that these methods can also help to awaken your direct perception of the Invisible World of Spirit and Vibration, creating a major step forward in your own core spiritual development.

Although this work has ancient roots, in its new public form it is only just at its very beginning.

We invite you to become a part of bringing it into the world.

I. THE SPIRITUAL AND SCIENTIFIC BACKGROUND TO THE VIBRATIONAL SPECTRUM

A. THE PLANES OF CREATION

To understand the Universal Vibrational Spectrum which we will be exploring in this training, we must first understand the larger context which the “Vibrational Spectrum” exists within.

The first step is to see where the Plane of Vibration fits into the overall system of the different levels of Creation.

BASIC 5-FOLD MODEL OF THE PLANES OF CREATION

As described in the Vesica online training ***Spiritual Science: Essential Teachings and Practices*** there are many different models of the levels of existence, taught in various spiritual traditions around the world.

These levels of existence are each stages of movement from the ONE -- the unified source which is purely spiritual and non-material -- outward to manifest all the different aspects of consciousness and energy into specific “Planes” of activity.

One common element of the different conceptual models taught by various spiritual traditions, is that all the Planes of Creation also exist inside the human being; to put this another way, all of the levels of the human being are detachments from the greater Planes. The different Planes can truly be considered the “Body of God” which creates our own physical and subtle bodies.

The Human Spirit is a detachment from the unified Spirit behind all creation (the Godhead, the ONE.) In some traditions the Godhead is described being a pure field of Being which is like an Ocean of Fire; each human being receives one Spark from that Ocean of Fire, which becomes our own individual immortal Spirit. This is the Flame depicted above the heads of Spiritual Initiates in many world traditions; for example in the Christian tradition this appears as the Flames above the Heads of the Disciples at Pentecost, showing the activation of their Divine Spark by the Holy Spirit.

The Human body of Consciousness, which allows us to be awake and aware, is called the Soul in the Western tradition; the esoteric schools of the West call it the “Astral” (meaning “Star”) body. Our body of consciousness, the Astral Body, is a detachment from the greater “Astral Plane”; the Mind of God spread throughout creation.

The Human Life Force - the vital power which animates our physical body - is called the Etheric Body in the Western tradition. It was called the Ka in Ancient Egypt and is known as “Ki”, “Chi”, “Prana” etc. in the Eastern traditions. Our Life Force is a

detachment from the universal field of Life Force energy, termed the ‘Universal Chi Field’ in Chinese metaphysics; this is the Vital Force of God spread throughout Creation.

The Human Physical Body is a detachment from the Physical plane. It’s name in Sanskrit means the “Sheath made of Food”; it is the vehicle for our Spirit to manifest fully into the Physical world of Nature, which is the Physical body of God.

When the Etheric Life Force has animated the Physical body and begins to break down and disintegrate, it creates another level below the Physical plane; we can call this the **Sub-Physical level**, or Sub-Nature.

For the purposes of this class, we are going to use this very simple 5-fold model which is derived from the Western Tradition with additions from the work of the great Rosicrucian teacher Rudolf Steiner. There are other models with different divisions of the worlds of creation, however those are described in the Vesica *Spiritual Science* classes.

In Summary, there are 5 Levels or Planes of Existence in our conceptual model for this training:

Spirit: This is the source of Beingness, of Self-Awareness; in the human being this is our spiritual core, our essence.

Consciousness: Emotional / Mental level.

Life Energy: Called the “Etheric”, also called Chi, Ki, or Prana in the East. This is the level of Vibration which we will primarily be focusing on in this class.

Physical: The crystallization of Spirit, Consciousness, and Energy into Matter.

Sub-Physical: In the work of Rudolf Steiner this is described as the realm of “Sub-Nature”, where Life energies have decayed to a level below the Physical plane. In modern culture we think of this as the Electro-Magnetic Spectrum.

THE IMPORTANT DIFFERENCE BETWEEN LIFE ENERGY AND ELECTRO-MAGNETIC ENERGY

When the Life Force which animates the Physical Body in all living beings begins to break up and decay, it passes into the Sub-Physical level where it becomes electro-magnetic (EM) forces. These EM waves are slower than the speed of light (Nikola Tesla referred to these “Hertzian waves” which we use in our modern technology as being “retarded” waves.)

Tragically, the concept of the Sub-Physical level, or Sub-Nature, has almost been lost today. The realm of the Sub-Physical is often confused for the true Vital Life Force which animates the Physical body.

Motivated by a desire to explain and justify vibrational methods of healing by using terms accepted by modern materialistic science and medicine, many persons active in Energy Healing work today describe the realm of Life Energy as being Electro-Magnetic in nature.

Tragically, this not only does this not lead to the desired goal of acceptance by mainstream science (which still shuns and persecutes Energy healing), it also fundamentally distorts our own understanding of Life Force in general and of our own human Etheric Body in particular.

Electro-Magnetic (EM) energies are below the level of the Physical, existing in the realm of the Sub-Physical; the Etheric is above the level of the Physical. The EM energies are Etheric forces in states of decay and disintegration.

EM forces in the human body are very weak and refined compared to the intensities of electricity and magnetism used in modern technologies. The extremely weak EM forces in the human body can only be measured by highly sensitive, specialized electronic equipment in medical research; they are the decaying “shadow” of the true Vibrational forces of Life in the human being.

As we will see in this training, standard Electro-Magnetic Field (EMF) meters can only pick up energies within the Sub-Physical level; they cannot detect Life Force energies, nor can they pick up the energetic effects of any type of Energy Healing or balancing method. This is why modern science and medicine reject all Energy Healing methods; it simply does not fit within their completely materialistic paradigm, and since the subtle Life Force vibrations cannot be picked up by their EMF detectors they assume it must not exist.

However we will find that our Vibrational Radiesthesia methods can not only detect any and all vibrations at the Life Force level, they can *also* detect the specific Vibrational qualities of EMF energies.

In fact, Vibrational Radiesthesia has the capacity to detect the specific qualities in any Plane, and to differentiate one Plane from another -- something no standard EMF meter can do.

You will learn the essential methods for testing the Vibrational qualities of both Etheric fields and EMF in this class.

In our next class ***Custom Vibrational Healing*** we will take this further, teaching you how to use Radiesthesia for testing on each Plane of Creation.

SPECTRUMS ON EACH PLANE

The 5 levels or Planes of existence each manifest their own full range of qualities within each plane.

This provides the larger context for the Vibrational Spectrum which you will learn to detect in this class.

SPIRITUAL: The *Full Range / Complete Spectrum of Divine Experience*.

CONSCIOUSNESS: The *Full Range / Complete Spectrum of Mental and Emotional States*.

VIBRATIONAL / ETHERIC: Divided into the French *12 Band Spectrum* which you will learn to detect in this course, or other systems which divide the Vibrational spectrum into further smaller components such as the *144 Sub-Bands* system which we will introduce later.

PHYSICAL: We call this spectrum in modern science the *Periodic Table of Elements*: this is the complete spectrum of all physical matter.

SUB-PHYSICAL: We call this in modern science the *Electro-Magnetic Spectrum*: seen in this larger context, the EM spectrum is the complete spectrum of Etheric energy which has fallen below the level of the physical plane and is in a process of disintegration.

B. VIBRATIONAL CONCEPTS OF DIFFERENT WORLD TRADITIONS

Virtually all traditional healing systems are based on characterizing different energies through a particular number of divisions. Many of these divisions were linked to qualities which were observed in Nature; these natural qualities were also connected with the vibrational effect of specific colors, just as they would later be in the French Radiesthesia research.

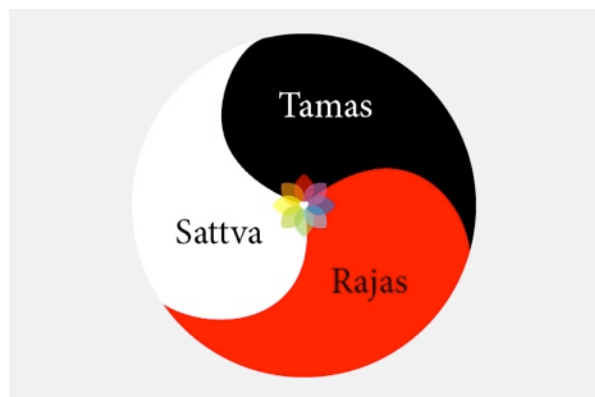

DIVISION INTO TWO

This is the simple primal polarity created when the original unified Sphere of Creation divides into two counter-balanced opposite poles of energy. This model of opposite -- but complementary -- polarities is most commonly associated with the “Yin-Yang” principle of Chinese philosophy.

DIVISION INTO THREE

This is a major focus in the Indian tradition. It appears in terms of the 3 “Gunas” cycle of nature which particularly affects conditions of consciousness, and the 3 “Doshas” used in Ayurvedic Medicine to evaluate a person’s constitution and body type.

The Three Gunas are used in Vastu Vidya, the Indian art of design and placement (similar to what Feng Shui is for China but with different concepts) with specific color correspondences.

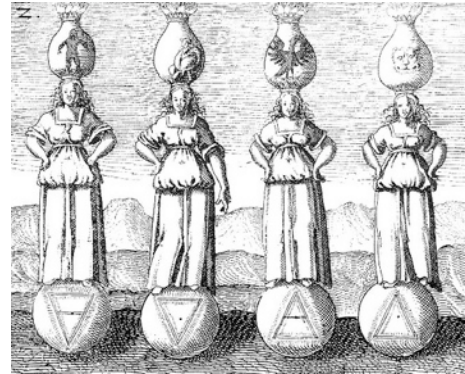

Sattva: Calm Abiding and Preservation; periods of Joy, Clarity and Intelligence.
Colors: Blue, Green, White, and light colors.

Tamas: Heavy, Inactivity, Sleepy, Destruction. Colors: Brown, Dark Blue, Black.

Rajas: The restless energy of creation that moves between Sattva and Tamas:
Desire, Activity, Instability, Heightened Emotions. Colors: Bright fiery Red,
Orange, Pink (can be Terracotta for room color.)

DIVISION INTO FOUR

The best known four-fold divisional system is the common Western model of the Four Elements of Nature: Earth, Water, Air, and Fire. These are also associated with specific Geometric symbols in Alchemy.

THE “4 ETHERS” ROSICRUCIAN SYSTEM

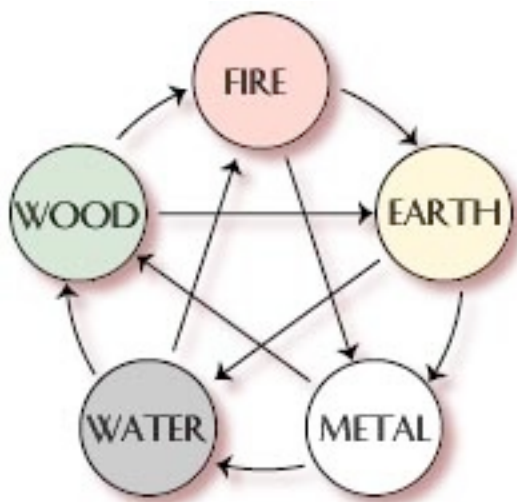

The little-known Rosicrucian system of “Etheric Physics” from Rudolf Steiner breaks down the level of Etheric Life Energy into 4 parts:

- **Warmth Ether:** Related to Heat / Fire [Reflection of Spirit Core / I AM Level into Etheric] – Geometric effect is Spherical / Rounded; Red.
- **Light Ether:** Light / Air [Reflection of Astral Level into Etheric] – Geometric effect is Triangular; Yellow.
- **Sound Ether:** (also known as Chemical Ether) Sound / Water [Etheric Level on the Etheric] – Geometric effect is Crescent Moon / Scalloped; Blue.
- **Life Ether:** Solid / Earth [Reflection of Physical Level into Etheric] – Geometric effect is Square; Violet.

The Four Ethers			
	Warmth	Radial Expansive Centrifugal	Impulse creating Binding biological force
	Light		Makes things visible Upright force in plants and humans
	Tone/ Chemical	Suctional Contractive Centripetal	Harmonizes Structures development of phenomena
	Life		Unifies an object and its environment

DIVISION INTO FIVE

Both the Chinese and Indian systems have well known systems of “5 Elements.”

CHINESE “5 ELEMENTS” SYSTEM

The Chinese System integrates the fields of Medicine, Internal Alchemy (Chi Kung internal energy circulations and development), Astrology, and Feng Shui into one unified system. The “Five Elements” system is key in every one of these fields.

The term we use in English “5 Elements” is in the original Chinese literally “5 Movements” or phases. Movement and change are key, so 5 element systems which are static are missing the main importance of the original concept. For instance, the seasons are a yearly cycle through the qualities of the 5 elements: increasing Yang from Spring to Summer,

increasing Yin from Autumn to Winter, etc. The same is true in Chinese Medicine,

where a person's health conditions can move through a cycle of different energetic phases.

FENG SHUI 5 ELEMENTS AND GEOMETRIC SHAPES

The term "Landscape" in Chinese is 'Shan Shui', literally "Mountain-Water", the two aspects which create the Earth. Originally Feng Shui was a system of becoming a Doctor to the Earth, managing the energy of the Land. Feng Shui means literally "Wind-Water", the 2 elements which sculpt the land and circulate Chi.

The 5 Elements in Feng Shui are associated with specific Shapes and Colors:

Metal: Round, Spherical: White

Water: Curving Horizontal shapes: Blue, Black

Wood: Rectangular: Green

Earth: Square: Yellow

Fire: Triangular: Red

(Note: Different schools may place Blue either into the category of Water or into Wood.)

ELEMENT	DIRECTION	SHAPE	COLOR
WATER	NORTH 	WAVY 	BLACK
FIRE	SOUTH 	POINTED 	RED
WOOD	EAST 	TALL & SLENDER 	GREEN/BLUE
METAL	WEST 		WHITE
EARTH	CENTER 		YELLOW

INDIAN "5 ELEMENTS" SYSTEM (TATTWAS)

India has its own "5 Elements" system, which is slightly different from either the Western Four Elements or the Chinese Five Elements systems. The Indian system has the four natural elements of Earth, Water, Air, Fire and then the addition of Akasha (a higher spiritual element). These are known as the 5 Tattwas or elements.

(Note: The above description is only the simplest aspect of the Tattwas system. There are Indian systems of Tattwas with further levels added, including systems of 25 or 36 total Tattwas.)

Although the Chinese system of Feng Shui has become much better known in the West recently than has the classical Indian system of Vastu Vidya, the Indian system is equally vast and profound.

Just as Yin & Yang and the Five Elements are key to understanding Chinese Feng Shui (and Chinese Medicine), so understanding the Three Gunas (fundamental natural cycles) and Five Tattwas (Elements) are key to understanding Vastu. As with the integrated Chinese system of healing and metaphysics, so the Indian system too is

integrated between its various branches: medicine (Ayurveda), astrology (Jyotish), environmental energy balancing (Vastu), etc.

THE FIVE TATTWAS (Elements in the Indian System):

Earth: Yellow Square
Water: White Crescent
Air: Blue Circle
Fire: Red Triangle
Akasha: Black Egg

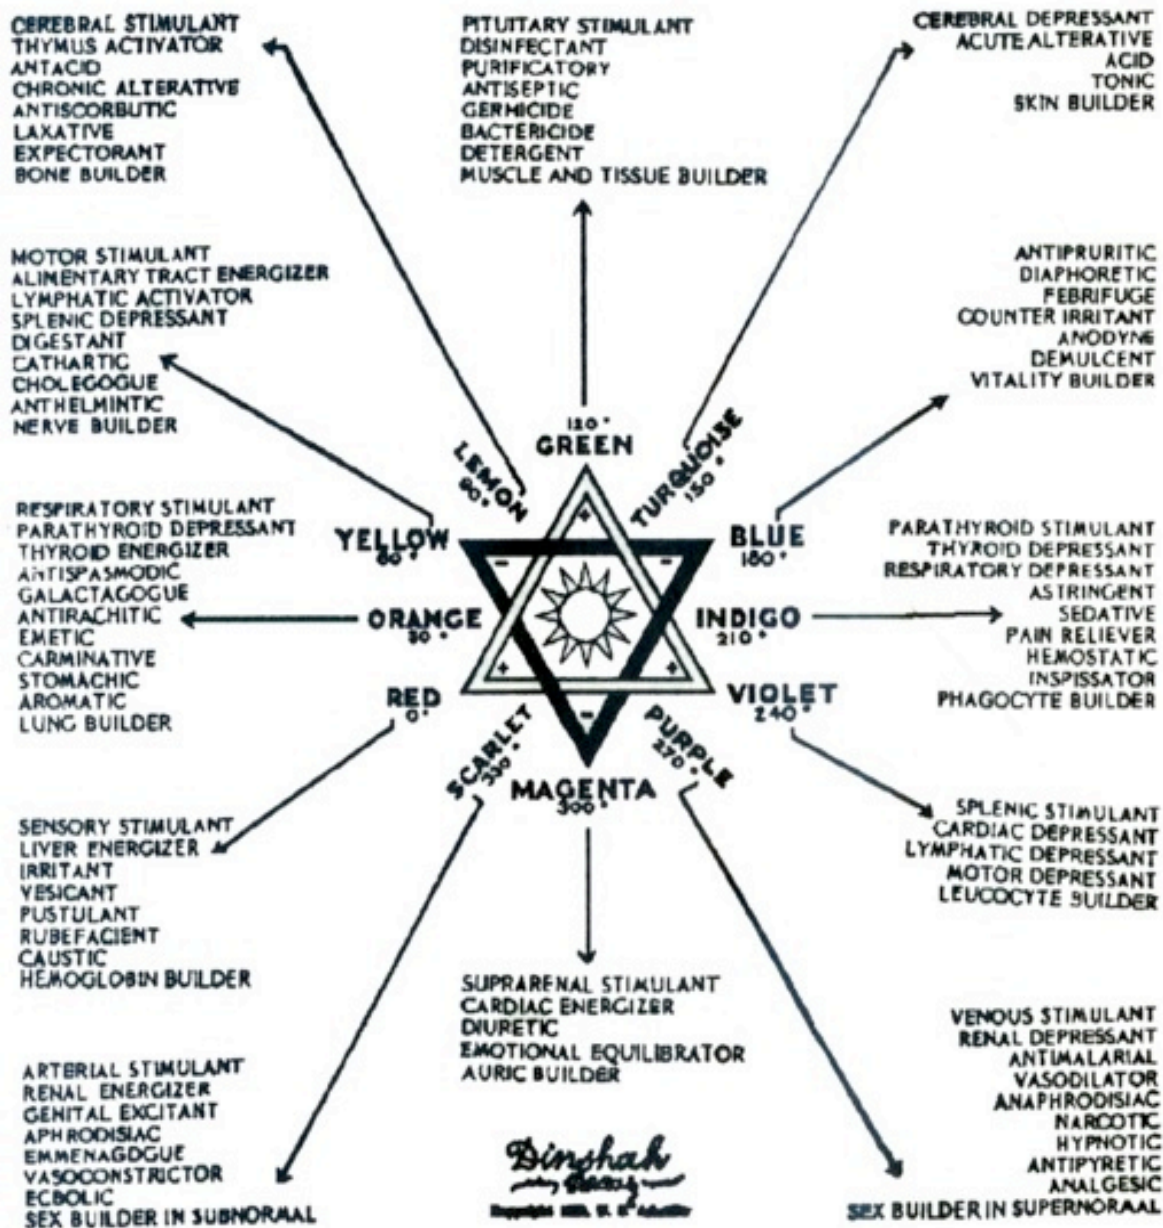

These 5 Tattwa elements are also understood to be related to the system of 3 Doshas described earlier, as seen in the chart to the right.

These are just some of the best known systems of dividing natural forces into different numbers of elements, each with their own Vibrational powers and effects.

Mention should also be made of systems of Color Therapy, which often use divisions of from 7 to 12 colors, identifying the exact vibrational functions of each color. One of the best known modern color therapy systems is Dinshah's Spectro-Chrome system, as seen on the next page. Systems of Sound Therapy which divide the sound spectrum into specific notes and their powers are similar in concept and application.

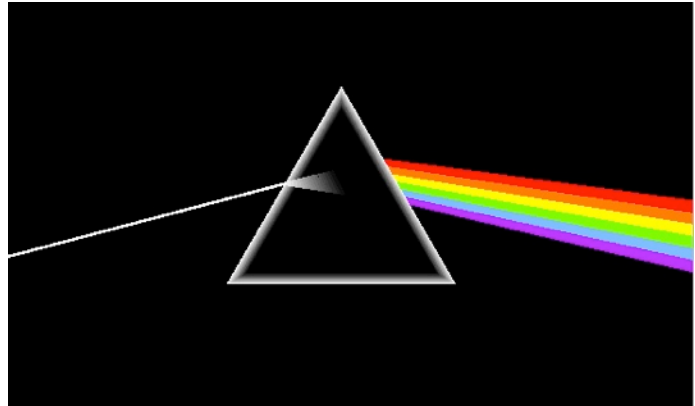

Spectro-Chrome Tonation System

C. THE “NUMBER PRISM” AND THE IMPORTANCE OF 12-FOLD SYSTEMS

THE “NUMBER PRISM” PRINCIPLE

One of the key original concepts in the Vesica ***Sacred Geometry*** training is the “Number Prism.” **Just as a physical Prism can reveal the hidden colors within clear light, so the number of divisions we conceptually apply to a phenomenon can reveal hidden aspects within it.**

For example, we will be able to clearly perceive certain energetic realities when applying the Yin-Yang polarity concept of 2-part division to a particular phenomenon; the aspects revealed by Yin-Yang analysis may be obscured by applying the Doshas 3-part division. However for other energetic realities, they could only be perceived through the use of the 3-part division of the Doshas and may be obscured when seen from a Yin-Yang 2-part perspective.

So the number of conceptual divisions we choose to apply will allow us to isolate and reveal previously hidden energies or dynamic relationships within a phenomenon, while it may obscure other energies or relationships that would be revealed by other divisional systems.

This is why all of the divisional systems of analysis we just described from classical traditions are all valuable; it is not a matter of one being better, or more accurate, than another. They are all important perspectives, which become even more powerful when we learn how to apply each one as needed (and not be restricted to just one system, as unfortunately happens so often done today in our modern culture of “specialists”.)

THE IMPORTANCE OF THE TWELVE-FOLD SYSTEM OF DIVISION

Understanding that it is not a question of one system being “better” than another, we can go further and ask; if each divisional system helps to identify particular phenomena

which are otherwise hidden, **what is the minimum number of core divisions needed in order to most fully identify each separate, essential function within a phenomenon?**

In the story of the Blind Men and the Elephant, each individual blind man only sees one aspect of the total Elephant; mistaking the Ear for a Fan, a Leg for a Pillar, etc. Only by bringing together all the different perspectives can the reality of the Elephant be fully comprehended.

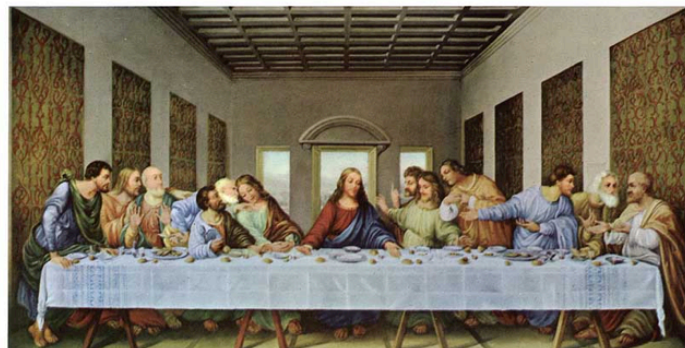

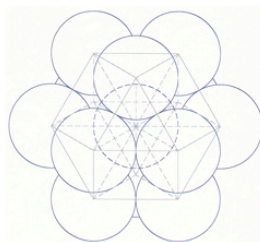

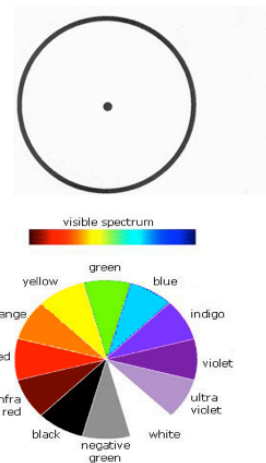

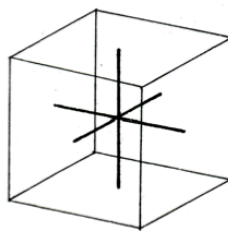

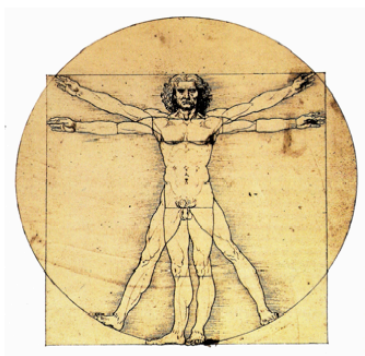

Rudolf Steiner described that to fully understand any phenomenon in its totality, requires seeing that phenomenon from at least 12 different perspectives.

This can be thought of as “walking a circle” around the central subject, stopping at 12 equally spaced points in that circle to see a new perspective on the subject. We can refer to this as the “12 around the 1” principle.

This principle is embedded in the teachings of Great Spiritual Traditions around the world, and in the science of Sacred Geometry.

This principle appears in multiple forms in great spiritual traditions, including as systems of 12 Initiates, Spiritual Leaders, or Higher Beings. For example in Christianity there are the 12 Disciples around the Christ; in Shia Islam as the 12 Imams who are the successors to the Prophet Muhammed; in Shingon Buddhism the 12 Devas of the Directions; etc.

Physical Manifestation: “12 Around the 1”

At a larger scale, this principle manifests in the division of the stars through which the Sun travels (the Plane of the Ecliptic) into 12 signs of the Zodiac in the Western tradition (12 signs around the Sun, like 12 Disciples). This principle appears in the Chinese tradition as the 12 different animal birth signs assigned by year (based on the 12-year orbit of Jupiter) and as the 12 “Earthly Branches” in Chinese Medicine.

Rudolf Steiner indicated that the principle of 12 as the minimum number of divisions is the reason why it required 12 Disciples around Christ to fully perceive all of the key facets of this Being. He also noted that there is an esoteric group of 12 Initiates in the Rosicrucian tradition; 12 Bodhisattvas; and there were 12 Initiates present for the Initiation of Christian Rosenkreutz. Steiner once stated that to fully activate the spiritual potential of the Earth would require 12 groups, each containing 12 Initiates; this gives a total of 144, as the spiritual number manifested by 12×12 (we will discuss the 144 principle later in this series.)

In Sacred Geometry, this Principle of the “12 around the 1” is understood as a Thought in the Mind of God which gives rise to the fundamental forms of Creation.

In Sacred Geometry the first Form of creation is the Sphere, where each point on the Perimeter is equidistant from the Center; in 2D the Sphere becomes a Circle. The Sphere is the primordial container for Energy and Consciousness.

To completely cover a Central Sphere (the primordial form) in all directions by Spheres of equal size, takes exactly 12 spheres (see illustration on the preceding page); this phenomenon was called by Buckminster Fuller “the close packing of spheres.”

The Cube is the Crystallization into the most stable form of matter, just as Salt (a preservative) crystallizes in Cubical form; in 2D the Cube becomes a Square.

To create a Cube (the form of crystallized materialization) requires exactly 12 lines to create the boundary that defines the shape of the Cube around the center.

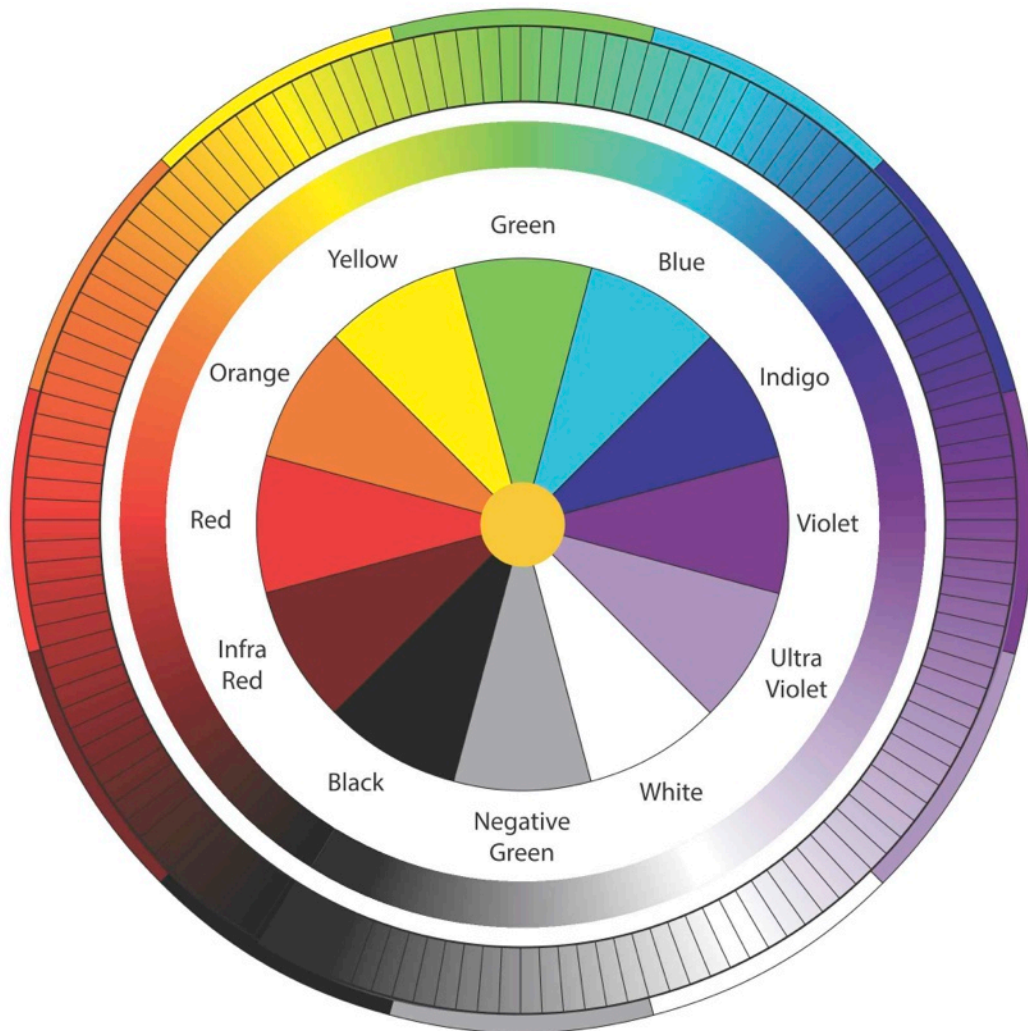

The Sacred Geometry mystery of “Squaring the Circle” is related to this principle of uniting Heaven and Earth, the Source and its Manifestation, with the power of the 12.

In summary we can say that the 12 are the full spectrum of different perspectives / abilities / powers; they form a circle around the One in the center, the representative of the Divine Unity. This “12 around the 1” archetype then is the principle of the unified source (the ONE) manifesting into 12 different aspects to create the world.

These considerations help illuminate the deeper justification for our use of 12 bands to divide the Vibrational Spectrum into separate components. Each Band is a Divine Power manifested from the ONE source in the Center.

The 1 in the Center is the secret of the Source,
identified in its Vibrational Components by Dr. Ibrahim Karim.

The 12 on the Periphery are the secret behind all Manifestations
of the Source into the worlds of Creation, identified in their
Vibrational Components by the great French Radiesthesiasts.

D. THE SCIENTIFIC DISCOVERY OF THE ELECTRO-MAGNETIC & PHYSICAL SPECTRUMS

As seen in the previous section, classical traditions focused on elements and cycles at the Vibrational / Etheric Life Force level. In the modern era, scientific analysis has focused on the lower Planes of the Physical and Sub-Physical.

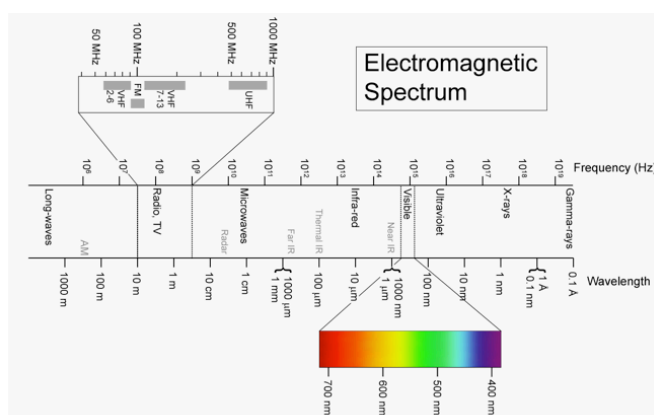

The discovery of modern Spectrum Analysis has been a major advancement in human development, allowing us to “crack the code” of the Physical and Sub-Physical world.

We are using here the term “Spectrum Analysis” in its most general sense, of identifying all the component parts of a system and defining their individual powers & functions.

All of our modern technology, all the accomplishments of our contemporary civilization, are based on two fundamental breakthroughs:

1. **The identification of the Electro-Magnetic Spectrum:** as described earlier, this is from a larger perspective the Spectrum of the ***Sub-Physical*** level; this is the decaying vital energy, which is slower than light and can be forced through wires or through receiving circuits to send energy or information.

DISCOVERY OF THE ELECTRO-MAGNETIC SPECTRUM 1800's - 1900's

1800: InfraRed

1801: Ultra-Violet

Mid-1800's: Radio-Waves

1870's: EM Wave Theory by Maxwell

1880's: Hertzian Waves produced Electrically

1890's: Tesla Creates AC Electrical System, shows difference between Hertzian and Scalar Waves

1895: X-Rays

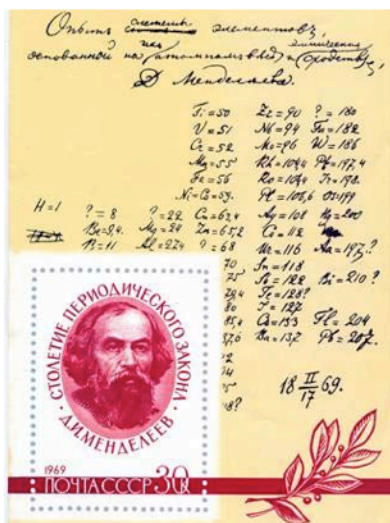

1900 - 1914: Gamma Rays

1932: Microwaves

The discovery of the modern Electro-Magnetic Spectrum began in 1800 with the identification of Infra-Red, followed soon thereafter by the identification of Ultra-Violet. By the 1880's Hertzian waves were being produced through electrical apparatus, leading to Tesla creating the Alternating Current (AC) system which we use today in the electrical grid systems which now cover the Earth. Our modern EM Spectrum was completed in 1932, with the identification of Micro-Waves. (Interestingly, this is the same year when Chaumery and de Belizal began to finish the Vibrational Spectrum through their work with "Negative Green", as we will see later.)

2. The identification of the Periodic Table of Elements: this is the spectrum of all physical matter, everything which makes up our physical world.

1869: Discovery of the Spectrum of Physical Matter ("Periodic Table of Elements") by Mendeleev

The foundation of the Periodic Table was established in 1869 by Mendeleev, with an ongoing identification of new man-made (not naturally occurring) Elements at the end of the Spectrum.

This discussion of the discovery of the Electro-Magnetic Spectrum and the Periodic Table of Elements provides more background to our previously described basic system of Spectrums based on Plane Level, which we repeat now below:

SPECTRUMS IN EACH PLANE:

SPIRITUAL: The *Full Range / Complete Spectrum of Divine Experience*.

CONSCIOUSNESS: The *Full Range / Complete Spectrum of Mental and Emotional States*.

VIBRATIONAL / ETHERIC: Divided into the French *12 Band Spectrum* which you will learn to detect in this course, or other systems which divide the Vibrational spectrum into further smaller components such as the *144 Sub-Bands* system which we will introduce later.

PHYSICAL: We call this spectrum in modern science the *Periodic Table of Elements*: this is the complete spectrum of all physical matter.

SUB-PHYSICAL: We call this in modern science the *Electro-Magnetic Spectrum*: seen in this larger context, the EM spectrum is the complete spectrum of Etheric energy which has fallen below the level of the physical plane and is in a process of disintegration.

MODERN SCIENTIFIC SPECTRUM ANALYSIS

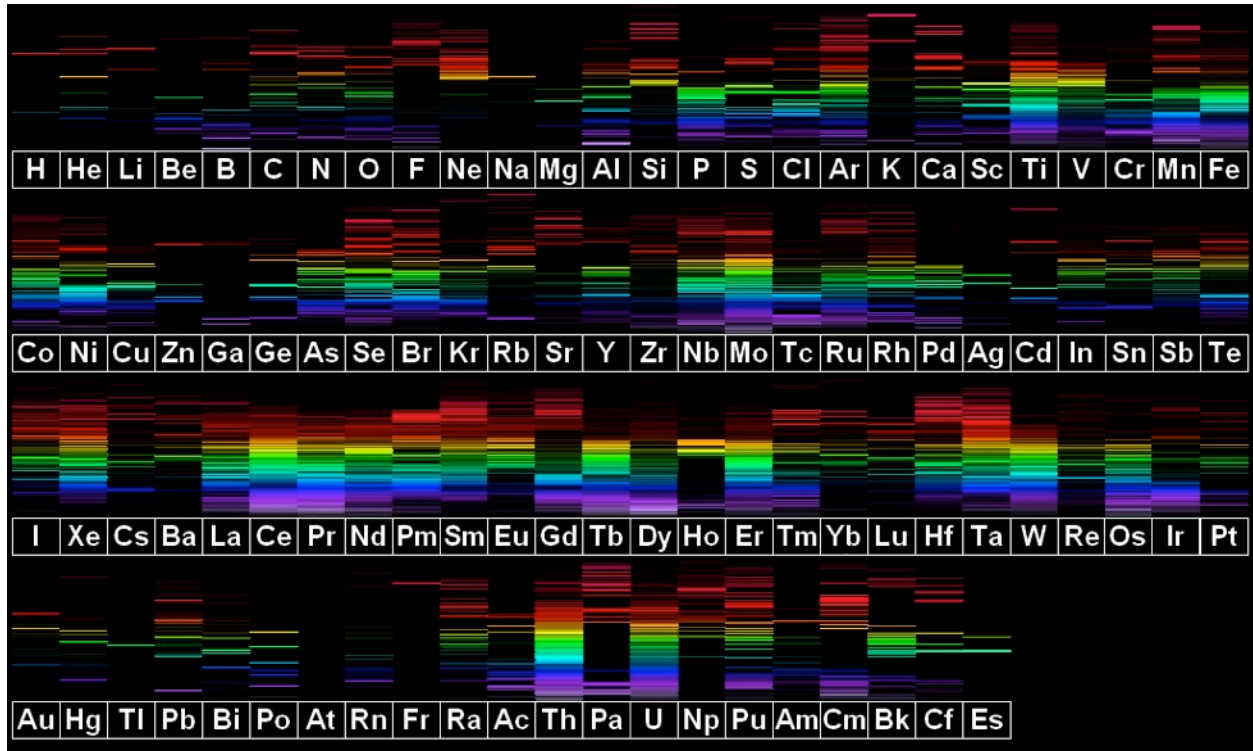

Beyond the general concept of Spectrum Analysis we also have the specific modern form of Spectroscopy in chemistry and physics, wherein the electromagnetic aspects of different forms of matter are analyzed.

Modern Spectrum Analysis allows us to know the exact composition of materials, even of distant stars.

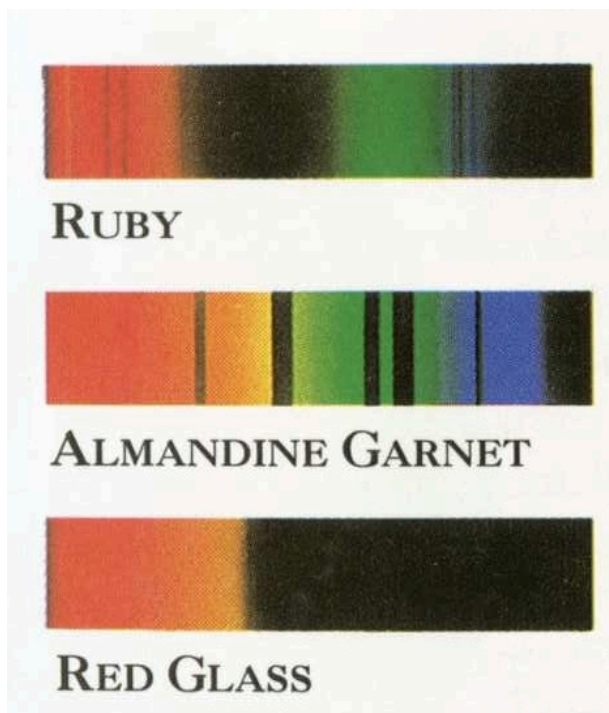

Spectrum Analysis of Electro-Magnetic Energies allows us to know the exact wavelength Spectra coming from any EMF, including Light Sources.

For example, in comparing natural Sunlight to different types of artificial lighting, spectrum analysis demonstrates which lighting sources offer the most complete spectrum of color bands (the most similar to natural sunlight) and which are the most deficient.

Below are the Spectra for each Element on the Periodic Table (everything which makes up the physical world):

Below is the analysis of three substances, which all appear on the surface to be a similar red color.

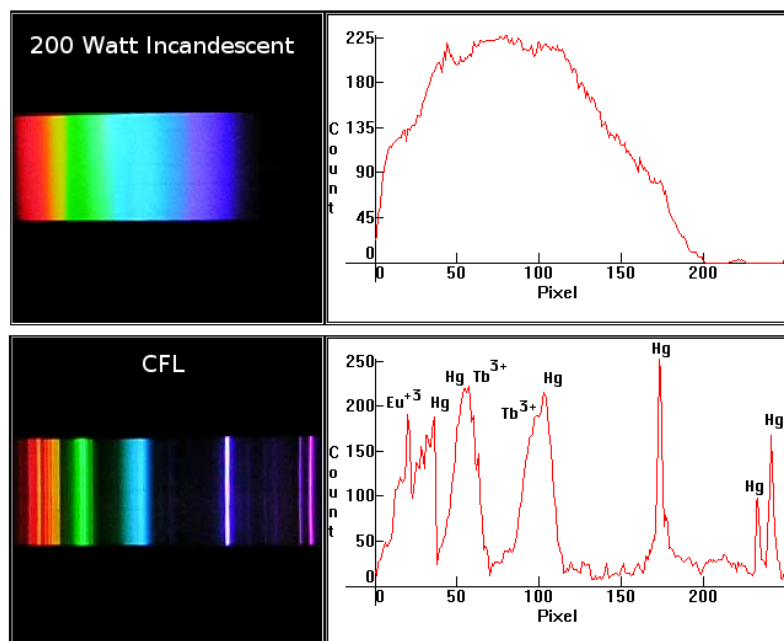

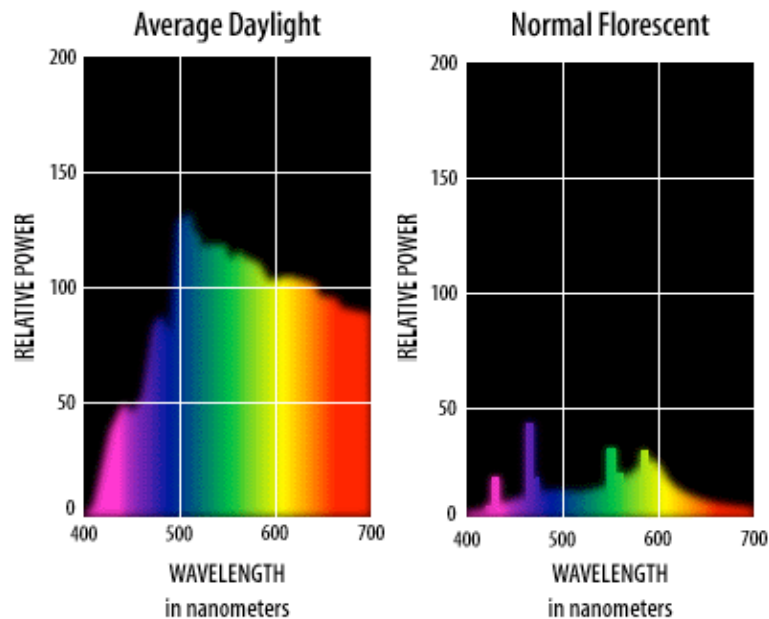

Note that Ruby is primarily Red, and is used as a primary Red Vibration (“Prana”) stone in classical Indian Vedic gemology, whereas Garnet is a secondary Red source in that tradition (and we can see here that it has a wider range of color than Ruby, ie it is not as specifically focused in the Red band.)

What this physical spectrum analysis does *not* show is the **Etheric activity** of the substance - Red Glass appears to be a very strong Red in spectrum analysis, but does not have the Etheric activity / functions of natural Ruby or Garnet.

Below are the Spectra of different light sources. Note the differences between natural daylight and Incandescent bulbs on the one hand, and on the other hand Fluorescent bulbs (which also have Mercury spikes); these differences indicate the superiority of natural light and Incandescent bulbs over Fluorescents.

Vibrational Spectrum Analysis, as we will see later, goes further and can directly identify the detrimental *vibrations* which are much stronger in Fluorescents than in Incandescent or LED sources.

E. RUDOLF STEINER AND THE SPIRITUAL SIGNIFICANCE OF SPECTRUM ANALYSIS

There is a remarkable -- and little-known -- spiritual background to the development of Spectral Analysis in modern science.

The great European Rosicrucian teacher Rudolf Steiner was once asked for the background to his own spiritual purpose and Spiritual Initiation, by the French writer Edouard Schure. His answers are found in a document known as the “Notes of Barr” from September, 1907.

He describes in this document that there were specific events in human evolution which were foreseen in the European Rosicrucian tradition, led by a great Spiritual Initiate whose was known to the public only as Christian Rosenkreutz. When certain of these foreseen historical events came to pass, this would then be the trigger for the previously hidden spiritual mysteries of Rosicrucianism to be revealed to the public (as was carried out by Steiner himself.) As Steiner described in the Notes of Barr document:

“...Rosicrucianism was intended to be a strictly secret school for the preparation of those things which would become the public task of esotericism at the turn of the 19th century, when material science would have found a provisional solution to certain problems.

These problems were described by Christian Rosenkreutz as:

- 1) The discovery of spectral analysis**, which revealed the material constitution of the cosmos.
- 2) The introduction of material evolution** into organic science.
- 3) The recognition of a differing state of consciousness from our normal one** through the acceptance of hypnotism and suggestion.

Only when this material knowledge had reached fruition in science were certain Rosicrucian principles from esoteric science to be made public property.”

(From Part II of Rudolf Steiner’s *Notes of Barr*, emphasis added.)

There is a very deep spiritual background to these statements, which we will briefly outline on here as an important context for our work with the Vibrational Spectrum. We

will look consider the significance of each of the three “triggers” mentioned by Steiner in the *Notes of Barr* document.

THE DISCOVERY OF SPECTRAL ANALYSIS

As discussed earlier, it was the development of Spectral Analysis in its largest sense -- the ability to “crack the code” of every component of the Physical and Sub-Physical Planes -- which has created the powerful modern technology which has completely transformed the Earth over the last 100+ years. Sadly, this new technology has also deeply poisoned the Earth, and with it the bodies of humans and all other living beings, with toxic Chemicals and Radiation.

Spectral Analysis was the trigger for our modern destructive technology to be set loose in the world. The reason it became so destructive is that it only took into account the Physical and Sub-Physical levels, and not the level of LIFE itself; so that the detrimental vibrational effects of all the toxic chemicals and radiations are not taken into consideration when new technologies are applied in the world. In fact, only the Physical and Sub-Physical (in the guise of the “Electro-Magnetic Spectrum”) levels are proclaimed to exist by modern materialist science; all higher planes, even Life Energy itself, is denied to exist and is proclaimed a fantasy.

What this requires is for the process of Spectral Analysis to move now upwards to the next level of the Planes: from the Sub-Physical and Physical, to the Etheric Life Energy level.

This basis for this Vibrational Spectrum Analysis was accomplished by the French Radiesthesiasts in the early 1900’s.

THE INTRODUCTION OF MATERIAL EVOLUTION

The concept of material evolution has become not only a scientific concept, it is now used as a de facto *replacement* for any and all concepts of energetic or spiritual realities beyond the physical plane. Everything in creation is held by modern science to have developed by a blind random process of material evolution, with no higher forces, consciousness, or Beings involved.

In contrast, Steiner and other researchers of Spiritual Science introduced the concept of the Evolution of *Consciousness* beyond just the Evolution of *Matter*. As is understood in many great spiritual traditions (and particularly prominent in the Indian / Himalayan tradition) the foundation of existence is Consciousness, not Matter. Matter is a secondary phenomenon, created by Consciousness and then given its specific Form by Vibrational energies. (The creation of Form by Vibrations was demonstrated in the *Cymatics* work of Hans Jenny.)

In the Evolution of Consciousness, the modern stage of human consciousness has gone through multiple earlier states of development. Ancient texts describe the non-

physical spiritual realities around us as clearly as they talk about the material world; in fact, the older the text the more the physical world appears as an illusion, with spiritual beings and planes the true reality. Human beings were once effortlessly clairvoyant, but not self-aware; they referred to themselves in the third person, and identified completely with their group or tribe.

The ability to perceive spiritual realities was linked to certain configurations (“structures”) in the human energy field. One of these was the extrusion of the Etheric body of life energy beyond the confines of the physical body.

Over time, the human Etheric body contracted into the Physical body. This allowed us to master our sense organs and made us self-aware; it increased our perception of the physical world while causing us to lose our perception of higher realities. The contraction of the Etheric body in our head area allowed us to use our brain to create tools, and to master the physical world through intellectual scientific thinking, while eliminating clairvoyance.

Many spiritual traditions resorted to the use of psychotropic plants to open up direct perception of the spiritual world in their Initiation processes, while the elders watched over and protected the Initiates under the influence of the plants from harmful astral influences (these plants have the effect of extruding the human Etheric body beyond the Physical body again, but only for a short period of time.)

The current stage of the Evolution of Consciousness was known in the European Rosicrucian tradition as the time for us to enter a new octave of awareness; to regain our old direct perception of higher realities, while at the same time now *keeping* the clear self-awareness and logical thinking we have gained in the previous stage of evolution.

This new stage in the Evolution of Consciousness leads to the third and final condition foreseen by Christian Rosenkreutz for the public release of the Rosicrucian mysteries.

THE RECOGNITION OF A DIFFERING STATE OF CONSCIOUSNESS

This next stage of the Evolution of Consciousness was described by Steiner as including specifically the development of direct perception of the next Level beyond the Physical Plane: the Etheric realm of Life Energy, of Vibration. Steiner termed this the “New Etheric Clairvoyance.”

This is the ability to directly perceive the Etheric energy all around us -- the “Universal Chi Field” in the language of Chinese metaphysics -- which is invisible to most people today.

To understand how this “Etheric Clairvoyance” can manifest, we need to know some basic Spiritual Science.

We don’t actually have sensation in our physical body; the sensation is provided by the Etheric Life Body. When a part of your body “falls asleep” and you can’t feel it, then the

Etheric has been withdrawn from it; as you regain feeling, the Etheric is returning (this is linked also to the movement of blood, as the Etheric is carried to a great degree by liquids in the body.)

When we experience the pure Etheric level we are aware of Vibration, which we may experience as a “tingling”, or sense of pressure, or a feeling of heat or cold.

We can also perceive the Etheric reflected in the next level above it, on the Astral plane. Just as we experience the Etheric in sensations of *Vibration*, so we primarily experience the Astral in terms of Light, Color, and Images (ie, literally “Clair-Voyance”, clear inner vision.) One manifestation of this ability is to perceive colored light “auras” around people or objects.

SPIRITUAL DEVELOPMENT THROUGH EXPLORING THE VIBRATIONAL SPECTRUM

The above considerations, including the development of the “New Etheric Clairvoyance”, provide the larger context for this training.

The first, and most obvious, purpose for this class is for you personally to attain the empirical ability to detect the full range of invisible Vibrations that affect us, which you can then apply to Energy Healing or to any other purpose.

But you will not simply be learning a series of “tricks” or mechanical techniques to detect and work with subtle energies in this class.

The deeper potential for this training is for it to become a profound process of self-guided, independent Spiritual Initiation for you.

Then the Vibrational Spectrum practices will open the new organs of spiritual perception which lie dormant in your -- and every person's -- subtle bodies.

As you practice the skills you will learn in this training with sincere openness and commitment to regular practice, you will start developing your own Etheric Clairvoyance; your own direct perception of the invisible world of Life Energy in which we all live, which affects every aspect of our life every day, yet which most people are completely unaware of.

As your skills in Vibrational Radiesthesia develop, you will begin to feel the difference between each of the bands in the Universal Vibrational Spectrum.

You will learn to recognize certain internal “signals” that are triggered when you encounter a particular vibration, which in the case of beneficial vibrations may be pleasant (for example a feeling of expansion in the chest or head) or in the case of detrimental vibrations may be unpleasant (for example a feeling of a twisting in the stomach, or a constriction in the head.)

You may also learn to experience the pure vibrational quality of each Band in the spectrum, beyond its effect on your own energy field; this is a higher level of development.

In time, you may start to perceive the vibrational fields around people and things with an inner spiritual vision. At this stage you may inwardly “see” the extent, intensity, and / or “color” of the vibrations present.

At still higher levels of spiritual vision development, it is possible to enter into the realm of the true Spiritual Initiate; perceiving the non-physical Spiritual Beings which weave through the Vibrations. These Spiritual Beings may reveal themselves to be of different types; whether Elemental Beings, Discarnate Humans, or higher Spiritual Beings.

THE SPIRITUAL SIGNIFICANCE OF THE YEARS 1930 - 1940: DISCOVERY OF THE VIBRATIONAL SPECTRUM

The comments above are a very brief gloss on a very deep subject, with further aspects described in more detail in our Vesica trainings in *Spiritual Science*.

One other item worth mentioning here: Steiner spoke multiple times between the years of 1911 and 1924 about the emergence of these new human Etheric Clairvoyance abilities, before his own death in 1925. In 1911 he stated directly:

“The first sign of these new soul faculties will soon begin to appear in a few isolated souls. Those signs will become clearer during the Fourth Decade, between 1930 and 1940, and especially in 1933, 1935, and 1937. Faculties that are still rare in people will begin to manifest as natural abilities.”

These years predicted by Steiner dovetail perfectly with the creation and public release of the Vibrational Spectrum by French researchers, and their development of practical methods to directly detect each band of the Spectrum.

It is these methods, when done correctly and with regular committed practice, which can start to activate our new organs in the subtle body to perceive these formerly invisible energies.

The key publications providing the basis of the Vibrational Spectrum took place between 1930 and 1940, starting with Louis Turenne’s 1931 book on *Light and Color*; this text provided the basis for the 12 band structure, which was depicted with the specific angles through which one can either test or manifest their vibrations (shown later in this training.)

The key written descriptions of the Vibrational Spectrum concluded with Chaumery and de Belizal’s 1939 book entitled *Traité Experimental de Physique Radiesthésique* (*Treatise on Experiments in Radiesthetic Physics*) which clarified the true nature of the 12th band (which they called “Negative Green”) and thereby completed the vibrational spectrum. They also created the essential tools used to effectively detect or manifest each vibration in the spectrum.

Steiner’s indication in the above quote of the critical years in which “signs will become clearer” is also synchronized with major milestones in this French Radiesthesia research. 1933 was the time of the key discoveries regarding the final Band in the Vibrational Spectrum termed “Negative Green” by Chaumery and de Belizal, and the year of the publication of Turenne’s third book which described in detail the “Law of Similars, the most important law in Radiesthesia.”

(The Law of Similars is the basic principle of Resonance between similar Vibrations, which allows us to connect to any vibration which exists across any boundaries of space or time, for the purpose of either energetic testing or application.)

In 1935 Turenne published his fifth book which included key findings on the vibrations emitted by Shapes and Forms; it also detailed the Horizontal and Vertical Waves which are essential to understand the beneficial or harmful effects emanating from each band of the Vibrational Spectrum.

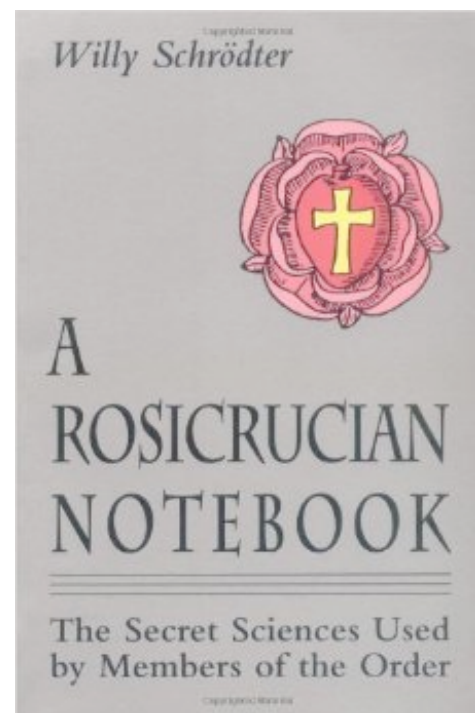

A FINAL NOTE FOR THIS SECTION

It was a matter of some debate whether or not to include this discussion of the deeper spiritual context for this class. For myself, this background is essential for my understanding of the purpose and potential of this work, and is a key reason why I have devoted so many years of my life to researching and teaching this Vibrational Science.

Hopefully this background will be meaningful for many students of this course, and will help to clarify the intimate connections between Spiritual Science and Vibrational Healing Science.

At the present time, most followers of Steiner's work (known as Anthroposophy) are not aware at all of the French Radiesthesia work and its connection to Steiner's indications. Steiner died in 1925, before any of this work began, so it is not mentioned in any of his works. There is also a tendency among Anthroposophists to either condemn or ignore Dowsing as being beneath them, or to consider it as "not something Anthroposophists do" because Steiner did not give it out; when there is any knowledge of Dowsing at all in these circles, it tends to be of more superficial types of Mental Dowsing with no awareness that the Vibrational form of Radiesthesia even exists.

Similarly, few people involved in Radiesthesia know the aspect of Steiner's work described above, which gives real context and larger purpose to Vibrational Radiesthesia practices. Even the original French Radiesthesia researchers apparently had no knowledge of Steiner's indications (we have to bear in mind also that Steiner was seen as a German, and the wounds from the First World War between the French and Germans were still fresh at the time of the French research.)

Today most people are not aware of the classical Rosicrucian Vibrational Science. it was never made public, and does not feature prominently even in Steiner's work. Many rare Rosicrucian texts were lost in the bombings of Germany in the Second World War. For those interested in the roots of Rosicrucian Vibrational Science, a good resource is Willy Schrodter's book which is called in its English translation *A Rosicrucian Notebook*.

II. THE DISCOVERY OF THE VIBRATIONAL SPECTRUM

A. THE FRENCH SCHOOL OF PHYSICAL RADIESTHESIA

THE CONSEQUENCES OF MODERN TECHNOLOGY

Through the breakthroughs of modern scientific Spectrum Analysis, we have harnessed the physical and sub-physical realms. However the materialistic science which accomplished this feat has no understanding of the effect of these technologies on the higher levels of the human being and of the natural environment.

This is particularly true of the effect of modern technology on Life Energy, the Vibrational level of human beings. Our new technology is breaking down the human immune system; this is occurring at the Physical Spectrum level with chemical toxins, and at the Sub-Physical Spectrum level with the ever-increasing density of electro-magnetic fields.

**Once unknown conditions like “Electro-Magnetic Sensitivity”
are now commonplace.**

**According to the *New England Journal of Medicine*,
Cancer rates in the U.S. have almost tripled between
1900 (around the start of our modern technology era) and 2010.**

As we will see later in this *Vibrational Testing and Healing* series, the detrimental effects of the vibrations created by modern technology can also be tracked regarding their impact on still higher aspects of the human being; our emotional, mental, and spiritual levels.

Dr. Ibrahim Karim, founder of BioGeometry®, has done particularly important work describing the impact of detrimental vibrations on human feelings, thinking, spiritual connections, and morality.

Later in this class we will explore the effects of each band in the Vibrational Spectrum on different levels of the human being. In our next class in the series (*Custom Vibrational Healing*) we will explore methods of testing or applying corrections to these higher levels.

MOVING TO THE NEXT LEVEL: VIBRATIONAL SPECTRUM ANALYSIS

As described earlier, since our modern technology has “cracked the code” of the Physical and Sub-Physical levels through Spectrum Analysis, we now need to move up

to the next level in the sequence -- the Vibrational, Life Energy level -- to redeem our modern technology and use it to support life itself.

As we have seen, many classical spiritual and healing traditions created systems to analyze a specific number of stages within energetic cycles, and to understand specific vibrational qualities.

Today we need a complete Spectrum Analysis at the Vibrational level, to identify each Vibration and its functions -- and to be able to manifest any specific Vibration, or set of Vibrations, as needed from within the complete Spectrum.

We have seen that this complete Spectrum Analysis requires a minimum system of 12 divisions of the Vibrational Spectrum, in order to clearly delineate each essential quality contained within the totality. Each of these divisions will then be defined as a specific *Band* of the Vibrational Spectrum, each Band having very different energy functions for practical applications.

As noted earlier, this Vibrational Spectrum of 12 Bands was created, and described in publications, by French researchers between the years 1930 - 1940. Tragically this work never became known to the larger public, and has been almost forgotten today.

Each Vibrational Band can be expressed in terms of Color, but also in terms of other Quality Scales; each Band is an archetypal energy function which appears in Sound, Shape, Color, Angle, Proportion, Number etc. This is implicit in the work of the French researchers, and has in recent years been made explicit and greatly expanded into a new "Physics of Quality" by Dr. Ibrahim Karim.

HALLMARKS OF VIBRATIONAL RADIESTHESIA VS. MENTAL DOWSING

As described in detail in the first class in this series (*The Personal Wavelength*) the techniques taught in this class are part of the method known as "Physical Radiesthesia" or "Scientific Radiesthesia" in France during the early 1900's. In this text, we will also use the term "Vibrational Radiesthesia", another term for this work used by the important researchers de Belizal and Chaumery. I have found that the term "Vibrational Radiesthesia" is a more intuitive and easily understood description for a modern audience which is familiar with the terms "Vibrational Medicine" or "Vibrational Healing."

Vibrational Radiesthesia is essentially the study of the vibrational radiations which create and sustain everything in our world. In English, Radiesthesia it is usually associated with the better-known term, "Dowsing". However, an important distinction needs to be made between Mental (also known as "Psychic") Radiesthesia/Dowsing and Scientific or Vibrational Radiesthesia/Dowsing. The latter term refers to practices which study pure vibrational phenomena with no asking of mental questions in the

dowsing protocol; the former term refers to dowsing methods which involve asking mental questions and receiving answers through the movement of the pendulum or other device. The mental form of dowsing is the predominant form of Pendulum Dowsing in the English-speaking world today, and it has also become dominant in France since the 1950's.

French researchers of the early 1900's felt that the mental form of dowsing could be overly subjective. They wanted to use Radiesthesia as an extension of modern Physics, with scientific protocols to detect the vast number of subtle radiations which cannot be detected by the crude electro-magnetic meters of modern science.

KEY RESEARCH DISCOVERIES REGARDING THE VIBRATIONAL SPECTRUM

The next four sections are devoted to describing the most essential discoveries by four researchers, which have created the basis for our work with the Vibrational Spectrum.

This will then be followed by instruction in practical methods to test for each Vibration in the Spectrum; how to differentiate the beneficial from harmful waves within each band; and a detailed description of the exact effects of each band on different levels of the human being. This will provide the basis for applying the Vibrational Spectrum for both analysis and practical applications, including for new expanded forms of energetic healing.

The first researcher we will introduce is Louis Turenne, who laid the foundation for the Vibrational Spectrum and for differentiating the beneficial from harmful components. We will also discuss his vibrational analysis of the effect of Waves on Illnesses and Toxins, as well as his pioneering research into the vibrational emanations from Shapes (the hidden energy science behind Sacred Geometry.)

The second researcher is Andre de Belizal, who along with his first collaborator Leon Chaumery completed the Vibrational Spectrum with the identification and analysis of the mysterious "Negative Green" band. We will look at his application of Vibrational Spectrum Analysis to different phenomena, and offer keys to understanding his work.

The third researcher is the Russian Col. Scariatin, who wrote under the pen name of "Enel". Enel introduced a spiritual dimension to the French Radiesthesia.

The fourth researcher is the Egyptian scientist and architect -- and my own Radiesthesia instructor -- Dr. Ibrahim Karim, founder of modern day BioGeometry®. Dr. Karim has discovered the Centering Vibration ("BG3") and many other new insights which have taken the French work to a new level.

IMPORTANT NOTE:

The French Radiesthesia research is very deep and technical; the sections which follow have been greatly simplified, and only the most significant aspects of their research related to the topics of this training series are described. There is a tremendous amount of research present in the French texts, far beyond the concise introduction to the Vibrational Spectrum which you will find on the next pages.

Because few people today have read the original French texts, we will describe some key concepts and discoveries from each researcher.

Please be aware that knowledge of these details can be very important for your safe, accurate, and effective use of Vibrational Radiesthesia.

B. THE DISCOVERIES OF LOUIS TURENNE

Louis Turenne was a Professor of Radio Engineering, who also served as an Instructor in Radio Wave technology to the French Military.

His work provided the foundation for the discovery of the Vibrational Spectrum, and the development of tools to detect it with Radiesthesia.

Turenne's training in Radio Wave technology showed him that we are surrounded by a wide range of invisible waves, which humanity had no idea even existed until we developed tools able to detect them.

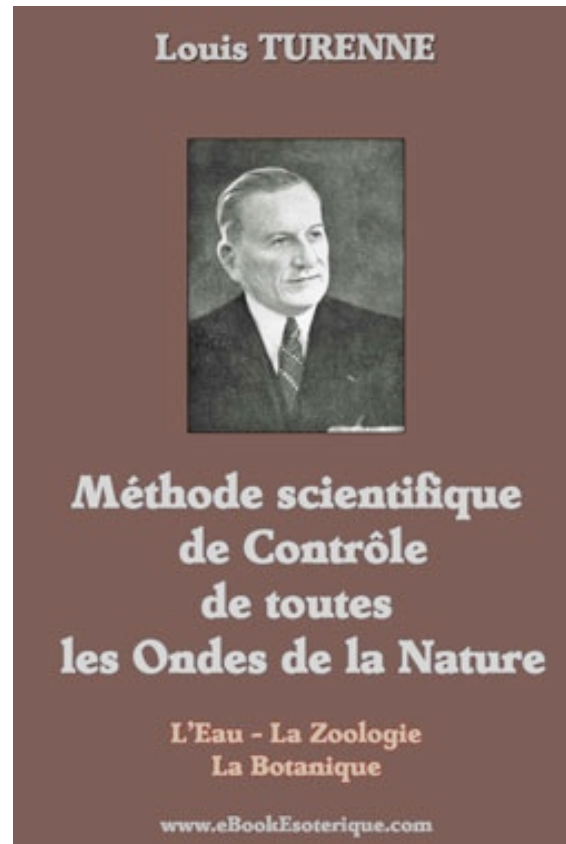

He knew that human beings and all life on Earth is being constantly affected by these invisible radiations, many of which are too subtle for the gross electro-magnetic meters used in modern science to be able to detect.

Turenne's goal was to apply Vibrational Radiesthesia as a 'Scientific method to control all the Waves of Nature'. His works are highly technical and detailed. He fully considered his work to be an essential breakthrough in modern Physics, and was deeply disappointed when mainstream Physics refused to consider his empirical discoveries. He simply went too far beyond the conceptual boundaries set by the field.

This brief survey of his Radiesthesia discoveries is highly simplified, with many of the more complex details of his work not included.

We will focus our attention on the aspects of Turenne's discoveries which are the most relevant to the topics of this training:

1. Establishing the Foundation of the Vibrational Spectrum.
2. Differentiating the Beneficial from the Harmful Waves.
3. Effects of Waves on Illness.
4. Waves of Form (Shape-Caused Waves).
5. Complete List of Publications by Louis Turenne.
6. Summary of the Discoveries of Louis Turenne.

1. ESTABLISHING THE FOUNDATION OF THE VIBRATIONAL SPECTRUM

Louis Turenne is the researcher who laid the foundation for the discovery of the Vibrational Spectrum and practical Radiesthesia methods to detect each Band in the Spectrum.

Beginning with his 1931 book on *Light and Color*, he created a system to identify a full range of invisible waves. The names of the waves were given in terms of color, although it is important to realize that by this he did not mean simply visible colors; the same vibrational quality as is present in the visible color is also present in invisible waves emanating from many different sources.

The use of color terminology to identify the different waves is also linked to his technique using specific Angles which can both generate as well as test for that invisible wave. This is the same principle as found in the refraction of white light at a particular angle in a prism, creating a specific color light ray.

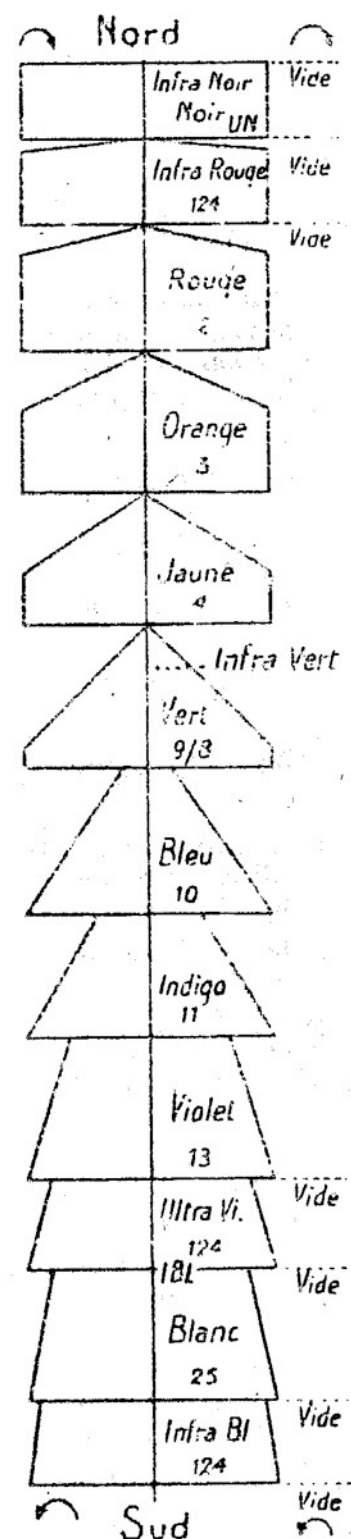

Turenne used this idea to create testing devices with specific angles.

This principle of using something (in this case an Angle) which *generates* a particular wave, as part of a testing device which can then be used to *detect* an invisible wave of that same quality, was referred to by Turenne as “the law of similars, the most important law in Radiesthesia.”

On the right is an illustration from Turenne’s early work, showing the foundation of the Vibrational Spectrum. The waves are identified by color names, with the angle that generates that wave (and is used for testing invisible waves of that quality) shown with it.

In this illustration he presented 12 different angles and their associated waves.

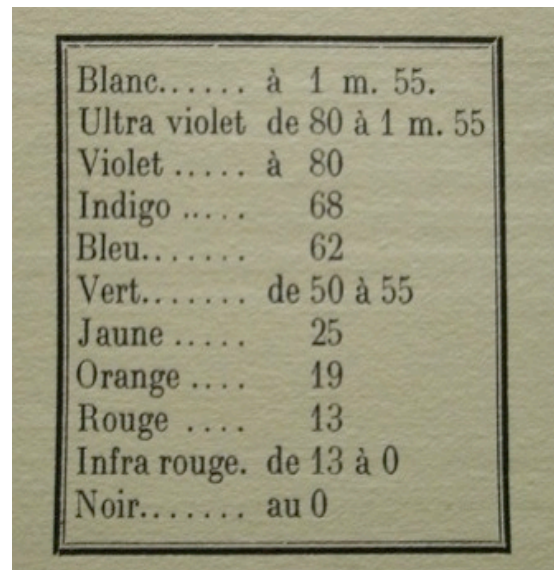

Starting from the bottom, the divisions in this early 12-fold version of the Vibrational spectrum are:

1. Infra-White
2. White
3. Ultra-Violet
4. Violet
5. Indigo
6. Blue
7. Green
8. Yellow
9. Orange
10. Red
11. Infra-Red
12. Black with Infra-Black (same angle)

In later works Turenne gave the wavelengths of these different bands, as seen in the illustration to the right. Note that in this list of wavelengths, he has only 11 bands listed; he has dropped Infra-White and Infra-Black.

NOTE 1: It is in this area regarding the ends of the Spectrum -- which Turenne called “Infra-White” and “Infra-Black” -- that de Belizal and Chaumery made their discovery of the 12th and final component of the Vibrational Spectrum, “Negative Green”, as will be described in the later section on their work. Turenne also noted in his works that Infra-White and Infra-Black is a “radio-active” region: and it is in Negative Green that we find the waves of literally Radioactive substances.

Blanc.....	à 1 m. 55.
Ultra violet	de 80 à 1 m. 55
Violet	à 80
Indigo	68
Bleu.....	62
Vert.....	de 50 à 55
Jaune	25
Orange	19
Rouge	13
Infra rouge.	de 13 à 0
Noir.....	au 0

NOTE 2: Turenne expected his work to be accepted by modern Physics, as a breakthrough discovery of previously unidentified invisible waves and their effects. He used concepts from standard physics to identify these invisible waves, such as giving their quantitative wavelength.

However the later work of Egyptian scientist Dr. Ibrahim Karim demonstrated that these invisible waves can only be fully understood in terms of their energy QUALITY, and that descriptions in terms of wavelength QUANTITY are insufficient. This will be discussed in more detail in the later section on Dr. Karim’s research discoveries.

2. DIFFERENTIATING THE BENEFICIAL FROM THE HARMFUL WAVES

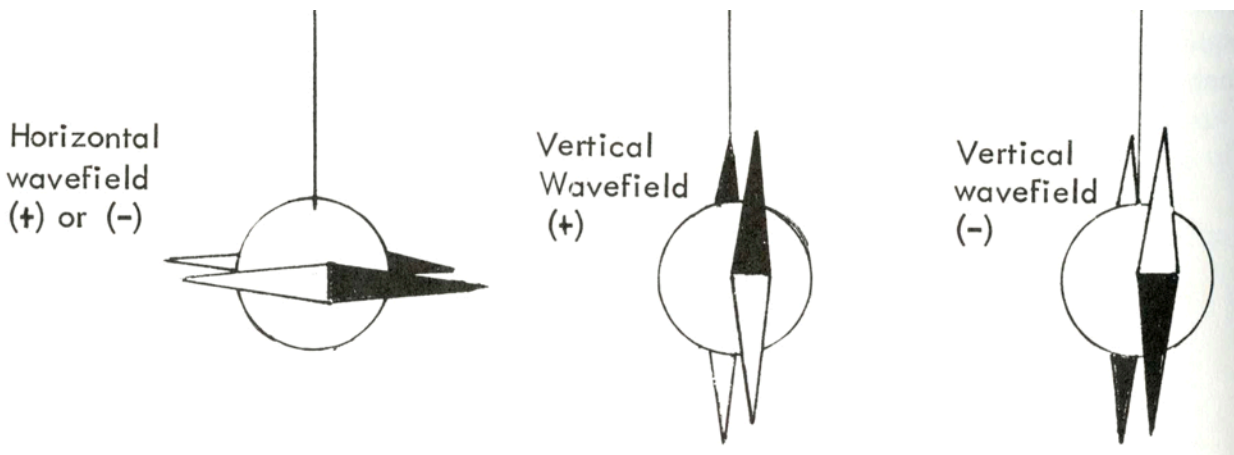

Turenne did extensive research into the direction(s) which invisible waves travelled, a research focus which continued throughout the entirety of his decades of empirical testing.

His system differentiated waves moving in a horizontal plane (Horizontal Waves) from those moving in a vertical plane (Vertical Waves.)

For this work Turenne needed a pendulum which could accurately detect the direction of energy movement of any and all waves. He created this by mounting standard Compass Needles on either side of a spherical pendulum. The alignment of the needles determined which waves were being detected.

When both needles were pointing the same way at a horizontal orientation, the pendulum would only detect waves (shown by a rotation of the pendulum) moving horizontally from the direction the red pointers indicated; if the needles were pointing the same direction vertically then the pendulum would only detect waves moving vertically from the direction the red pointers indicated (either upward or downward moving.)

Needles pointed in opposite vertical or horizontal orientations, or mixed vertical and horizontal aligned needles, would detect mixed waves with more than one flow direction of energy movement.

Unfortunately I am not aware of anyone making these pendulums for commercial sale today; however they are not difficult to make for oneself by attaching standard compass needles to either side of a spherical pendulum, so that the needles can be adjusted to turn to the desired direction. Turenne liked to use Green as a color for the pendulum

(related to his concepts regarding detecting Vertical Waves) whereas other researchers preferred to use black (primarily as a neutral color for the pendulum); I have not found the color of the pendulum to be critical, and have seen that clear plastic pendulums also work well.

I have found that used this type of Pendulum can be used to track the basic direction of energy movements from many different phenomena, including:

- * Finding the direction of flow of Earth Gridlines;
- * Identifying Horizontally propagating Gridlines moving through a location at specific heights of the room;
- * Identifying the movement of energies in major Earth Power Spots;
- * Identifying the movement of energies in the human body from particular energy practices, meditations, ingestible herbs, crystals and stones, etc.

See the section in the streaming video for this class for a demonstration of the basic principle of the Turenne Pendulum.

Please be aware that Turenne's methods for using this Pendulum were often more technical and complex than described here in a simplified form.

Turenne also noted that Electrical fields were detected in his method by Vertically oriented needles, and Magnetic fields by Horizontal needles. (A good overview of the principles of the Turenne Pendulum is found in Turenne's posthumous 1976 overview text *Scientific Radiesthesia: A Complete Introduction*.)

This became a foundation for the later work of de Belizal, with the two types of waves being described as Electric (in place of Vertical) and Magnetic (in place of Horizontal).

NOTE: The physical orientation of an object is not the same as the type of waves it emanates; in other words, vertical waves may come from an object that is oriented horizontally or vertically, and the same for horizontal waves. One can never assume what types of waves are coming from an object based on its physical orientation; the waves must always be tested with Radiesthesia.

Turenne summarized Horizontal and Vertical Waves in the following excerpt, translated into English from his 1950 French book *Radio-Disintegration*:

DEFINITION OF HORIZONTAL AND VERTICAL WAVES

We call *horizontal waves* those which are detected with our pointers set with horizontally-oriented antennas. There are three kinds: positive, negative, East-West.

We call *vertical waves* those which are detected with our pointers with vertically-oriented antennas. There are the same three.

In both cases their spectra are ellipsoid. The first are placed in a horizontal plane, the second in a vertical plane. The waves of crystals, for example, are horizontal, like those of gender, human, animal, and vegetable cells. The waves of illnesses on the other hand are of vertical aspect as are those of rare gases, atomic disintegration, etc.

This quote illustrates a key finding by Turenne: that the waves of Illness are vertical, as are atomic disintegration (radiation, known to be potentially deadly). This can be simplified by saying that the Horizontal waves (which Turenne attributes above to those emanated from natural crystals, plants, animals and humans) tend to be beneficial, and Vertical waves tend to be detrimental.

That is the key thing you need to be aware of for this course; however we will take this a bit further in the next section, regarding the Effects of Waves on Illness.

3. EFFECT OF WAVES ON ILLNESS

Turenne studied the effects of different waves on helping to control specific illnesses, or to activate them and make them more virulent.

In his 1931 book on ***Light and Color*** Turenne provided a general view of the effect of color wavelengths:

In *infra-red*, the diameters diminish and we know, by the numerous applications, that the venoms and microbes are reinforced there. In *ultra-violet* the diameters increase, and we know from the other experiments that the microbes and venoms are attenuated there. One can conclude from this that if microbes or venoms are in different milieux, their pendular waves are modified.

Diameters become larger in the milieux that diminish the virulence of the poison, and conversely, they concentrate and become more dangerous when this wave diminishes. We have also seen that poisons have pendular waves that likewise are the *shortest when they are the most virulent*.

Elsewhere in the ***Light and Color*** 1931 text Turenne went into detail about how he found that different vibrational bands impacted microbes, venoms, poisons, and Cancer (which he had found did not function in the way other microbes did.)

To give you a sense of Turenne's descriptions of these phenomena, below is an extensive excerpt from that 1931 text. Be aware that there are particular indications in this excerpt which go beyond what we are discussing in this class (such as radiesthesia aspects of electrons and protons.)

"The problem consists in finding the milieu in which each microbe, each venom, each poison and cancer will see their pendular waves of virulence become the largest possible; it is at this moment that they will be the most

dangerous. By following the example of ultra-violet, one will only have to look to create this milieu and to fight with it against the universal enemy.

We have seen that the total group of colors can be spelled out, by commencing on the negative side corresponding to the South pole of the magnet.

[Note: Turenne's work included analyses of the the poles of magnets, and the poles of the Earth. In French Radiesthesia many vibrational tools for testing or applications are oriented to magnetic North-South, so that they are aligned with the flow of the Earth's magnetic field.]

1. Ultra-white

2. White

3. Ultra-violet

Violet, Indigo, Blue, Green, Yellow, Orange, Red.

4. Infra-red

5. Black

6. Infra-black

7. Between black and white, if one removes the colors, one has black light (infra-white, ultra-black). This zone is radio-active.

8. Ultra-white and infra-black put behind and in their magnetic order.

We are going to successively put microbes and cancer in the 8 zones numbered and look how they carry the pendular waves of virulence there.

1. *Ultra-white*. Microbes annul all radio-activity. Cancer is very touchy here. It no longer has a pendular positive wave and seems to create, in its defense, circles of virulence analogous to those of microbes. The circles of great diameter cause a diminution of virulence. Here is the first time that we see cancer acting from the vibratory point of view like a microbe. But it is because we notice that only its negative pendular wave remains. It no longer can make its evil with just its negative wave.

2. *White*. All microbes annul their radio-activity; cancer alone becomes to contrary radio-activity.

3. *Ultra-violet*. In this radio-active zone, all microbes, venoms, and poisons see their wave diminish. Cancer, on the contrary, becomes radio-active there and charges the detectors with an excess of available protons and

electrons. Ultra-violet, by consequence, does not seem to cause much obstruction to cancer, but it really disturbs microbes.

Cancer annuls the radio-activity of the zone. It seems to touch it, but it seems to fold back on itself, ready to do its damage. Indeed, if one compares it to a microbe, one sees that it becomes as virulent as in infra-red, and the cancer tricks it into doing the evil that is prohibited doing on its own. Here is then the first time that one finds a zone that can influence cancer a bit, in a mediocre sort of way.

4. *Infra-red.* The microbe, cancer and the two together are strongly augmented in virulence, and we have known this for a long time, given all our experiments on this subject.

5. *Black.* Placed directly on the black band, microbes experience the suppression of their radio-activity. Cancer itself is very touchy. There is no more than one of its two spectra, the positive, and it can no longer wreak its havoc with only protons.

6. *Infra-black.* The microbe and cancer here annul their radio-activity, and this time it seems that there is a palpable result and that the enemy commences to be forced into entrenchment. It no longer even appears to do battle for the microbe. However, if one puts the microbe on the line of separation of infra and ultra-black, it does not annul the radio-activity of these two zones, while cancer does annul them.

Cancer looks then to extinguish any last opposing radio-active fires around it and to fight to the desperate end. Having arrived at this point, only one last experiment remains, one last chance to try in order to have victory.

7. and 8. To create infra-black and ultra-white, which both counteract cancer, put them side by side, and put the cancer on the line separating them. Each contributes radio-active power; ultra-white supplies protons and ultra-black supplies electrons in order to fight against the electrons and protons of the two pendular waves of cancer. Who will be the stronger? Who will have the freedom of the battle? Who will remain master of the terrain?

The microbe that is already ill in ultra-white, then a bit more in infra-black, is going to be completely attenuated on their line of separation.

Cancer still struggles a bit with its ultimate electrons, but on this separating line it hopelessly extends its 4.5 m. pendular wave of virulence that it had in infra-red. Here it stretches to 7.30 m., an electrical charge certain to failure. All three detectors no longer register its existence.

This time the cancer seems to actually be vanquished.

There is, however, still more to do against it, because when removed from this location, it recovers its vigor that was a moment ago sleeping. Replace it on the separating line, it falls asleep again, a prisoner of waves more powerful than it is.”

As noted earlier, Turenne’s research was based in many cases on standard Physics concepts of quantitative wavelengths. Although we will be using a qualitative paradigm in this training rather than quantitative wavelengths, to understand Turenne’s concepts it is necessary to know his view of the effects of wavelengths.

The most often cited key wavelength in Turenne’s work was the “8 Meter Wave”. Below is an excerpt from his important 1942 book ***Scientific Methods for the Control of All Natural Waves***:

“After the application of radiesthesia to research on the waves of water, metals, and many physical laws (more than 4000 successful experiments), it is natural that the radiesthesists research *human waves*, the waves of organs, illnesses, parasites, etc., and to deduce what waves are beneficial for health...

All living things emit waves and receive them. I have been the first to prove that these waves have a wavelength of 8 meters, when the organism is in perfect health, and a diminution of this wavelength amounting to less than 8 m., when there is a deficiency of health or illness...

We emit waves:

a) Simple horizontal waves all over the body. The waves of the vibrations of our cells are:

Positive for men and male animals, during the day

Negative for women and female animals, during the day,

At night, the opposite. Very few persons give inverse waves. We experience the change in direction just like the plants do at the change of the chlorophyll function.

b) Radio-active waves (four movements of the pendulum). At the armpits and the pubis (the three V's), the solar plexus, the medulla oblongata, the lumbar, and for women able to have children, from the armpit to the point of the breast (in order that the small baby with his radio-active lips can find the mother's milk).

Finally, the thénar eminences and hypothénar [areas on the palm of the hand which are able to pick up waves through the use of pendulums or rods in radiesthesia] are condensers that communicate directly to the medulla via the *Grand Sympathique* [Central Nervous System]. Between the eyes one feels also the waves of the pituitary.

Note. All other radio-active points of the organism are points of illness.

c) Some vertical waves are emitted by the brain, and they can be easily detected at the temples.

Note. Outside of these waves, our cells are made to vibrate only with horizontal waves. **When we meet vertical waves in the organism, it is of absolute necessity to suppress them immediately. This is the Enemy No. 1.**

BRAIN WAVES

If we test at a person's temples, or the axis between the eyes, then toward the pituitary gland, we notice there is an emission of vertical waves.

In consequence, we will say that intelligence acts upon us like an illness, it diminishes our wavelength..."

[NOTE: This finding by Turenne of how "intelligence acts upon us like an illness" is an empirical validation of Rudolf Steiner's observation that the human thinking process is a "death process"; what is meant by this is that our etheric life forces are used up by the intense energy demands of higher thinking processes. This does not mean that intelligence and thinking is bad or to be avoided; it is that it is an opposite polarity to the dynamic life forces, and that thinking depletes life forces and vitality -- one reason why so many people subconsciously avoid the hard work of thinking!]

SUMMARY:

The Key things to bear in mind from this survey of Turenne's research on health and illness are the following:

- a) Different vibrational bands have different effects on poisons, microbes, and other diseases.
- b) The 8 meters wavelength is natural to human body (and other phenomena) and linked to health, and below 8 meters wavelength is connected to illness.
- c) Horizontal waves are linked to health, and vertical waves are linked to illness. However there are some vertical wave areas in the body which are natural and necessary, but in all other areas they are linked to illness and must be kept out of the human organism.
- d) Another important observation, made explicit elsewhere in Turenne's work: that ***not all vertical waves are harmful***, it is those which are less than 8 meters which are the most dangerous.

These observations provided a basis for the work of the later researchers we will survey.

We will see that some of Turenne's observations were moved into new, simplified concepts and techniques which we will be using in our practical work later in this course.

4. WAVES OF FORM

In the French Radiesthesia research into invisible waves, one of the fascinating areas of study was the “Waves of Form”, also known as Shape-Caused Waves.

In this research, the hidden Vibrational Science embedded inside of what we think of today as “Sacred Geometry” was revealed.

One of the most interesting of Turenne’s texts is his 1942 book *Scientific Methods for the Control of All Natural Waves*. It is packed full of interesting new research into shapes, numbers, ancient and new forms of the Chinese Ba Gua, and other topics; while also being somewhat less technical than many of his other works.

Here are a few samples of Turenne’s discoveries regarding “Waves of Form” described in this 1942 text.

ENERGY EMANATIONS FROM HIEROGLYPHIC SHAPES

Turenne examined a mystery from Egypt; that in some locations, the ancient carved Hieroglyphs had a chisel taken to them in an earlier time, cutting a section out of the continuous line which created the original shape of the Hieroglyph. Why was this done?

Normal and Cut Hieroglyphs

Turenne discovered that he could pick up a specific energy wave coming from the regular, full form of the Hieroglyph (for this he used a system based on the “Series Point” method from Abbe Mermet, a method we will not be describing in this series.)

Turenne discovered that this energy wave was cancelled in the Hieroglyphs which had the chisel cut made through them. Not only were the Egyptian Hieroglyphs created with an understanding of the energy effect their shapes created, it was also understood (by others perhaps opposed to the working of the Hieroglyphs) that making a cut through

the form (so that the boundary lines making the shape were not longer continuous) would neutralize the energy they emitted.

HOW TO MAKE A FORM WHICH RADIATES AN ENERGY SIMILAR TO RADIUM

Turenne regularly used another technique we have not yet mentioned in this course; he put Radium salts in a wooden block, and then placed that around things he was testing with Radiesthesia. The strong emanation from the Radium salts acted to greatly amplify the subtle vibrational fields of the test subject, making them easier for him to test.

He found that a spiral drawn in a precise way would actually create the same strong broadcast of energy as Radium salts, and could be used for the same purpose; but this drawn form does not have the toxicity of radioactive substances.

This pattern is shown below, along with a section from our English translation of the original text.

It requires exactly 7 turns of the spiral -- no more, no less -- to create an energetic broadcast wave similar to that obtained with using a radioactive substance, but without the toxicity.

This principle would later be clarified by Dr. Ibrahim Karim's work on the "Power of Number" in BioGeometry: that forms containing exactly 7 elements can create a broadcast of the "Negative Green" carrier wave energy quality, a vibration which we will describe in the later section on the research discoveries of Andre de Belizal.

Making a spiral of wire, of some kind of metal, or even a drawing on paper, produces exactly the same waves.

If the solenoid has more or less than 7 turns, it must have radium to activate the waves. With 7 turns, there is no need, for disintegration appears all by itself.

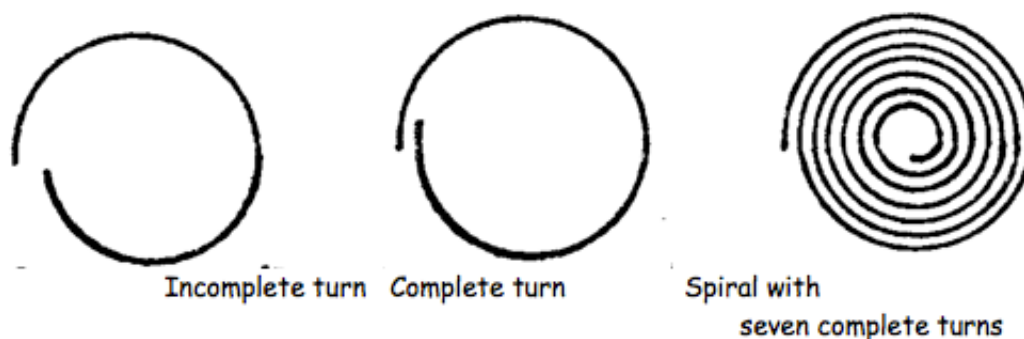

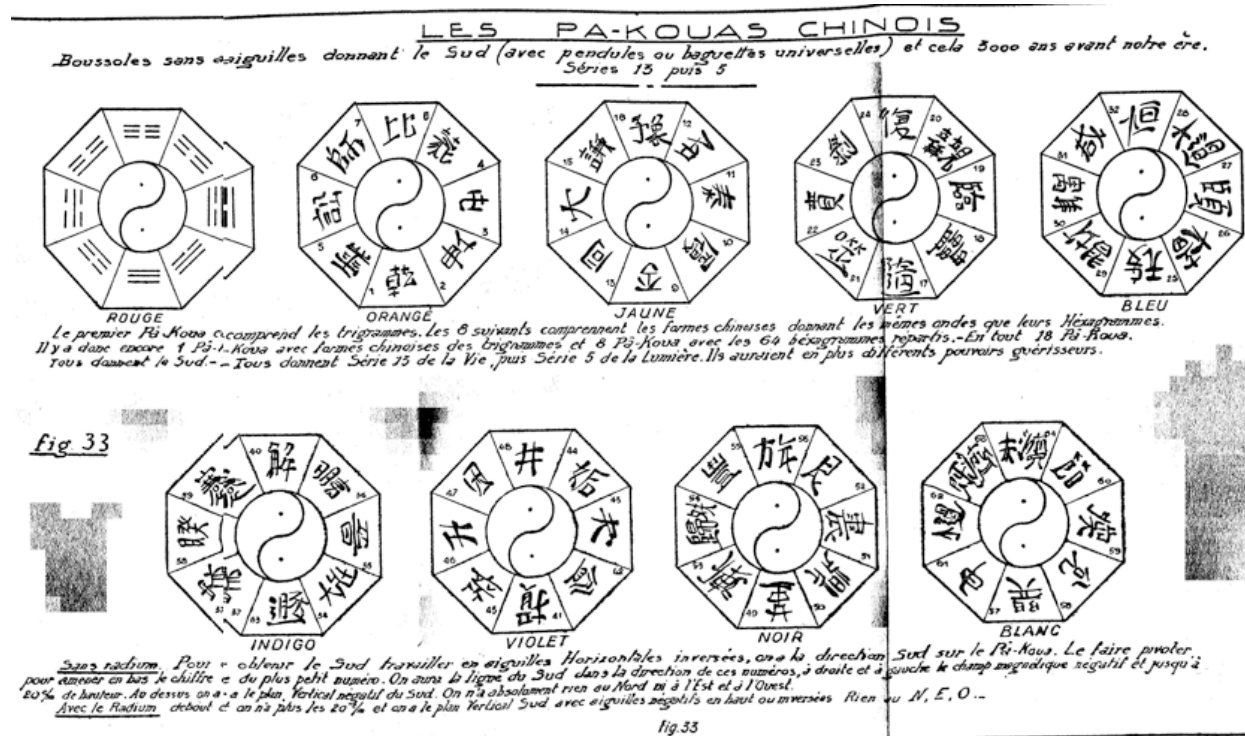

Figure 60.

VIBRATIONAL EMANATIONS FROM CHINESE BAGUAS

Turenne examined different forms of the octagonal Chinese BaGua symbol, and discovered it had specific vibrational bands present based on what forms or characters were placed in the 8 sections around the Yin-Yang symbol in the center. The illustration below from his 1942 text shows the BaGuas which produced different invisible radiations connected to the color bands.

He also examined in this texts some of the elements which appear in Indian iconography, including with representations of the Chakras, the Shiva Lingam, and other forms. He then applied his study of the Indian and Chinese forms to create his own original BaGuas, which contained in their design a combination of Chinese and Indian elements so that the new BaGuas radiated highly beneficial energy effects.

THE CONNECTION BETWEEN THE SHAPE OF THE ARABIC NUMERALS AND THE NUMBERS THEY REPRESENT

Turenne tested the vibrations from a number of dots representing a particular number -- for example four dots for the number four -- against the the vibrations of the shapes of the Arabic numerals representing that number.

He discovered that their vibrations were identical in many ways, indicating that the persons who created the Arabic numerals had found the shapes for the numerals to match the actual number vibrations.

For this testing he was using the Turenne Pendulum described earlier.

Below is an excerpt from a translation of this part of Turenne's 1942 text.

THE WONDER OF THE ARABIC NUMERALS [9]

In a horizontal line draw 1, 2, 3, ... 10 dots, and underneath, the corresponding Arabic numerals. Stand the radium block vertically on the piece of paper in order to induce radioactivity (that is disintegration), and find below the laws that show the valuable extraordinary ingeniousness of the Arabs who have discovered the vertical waves emitted by the geometric forms of their numerals:

0 1 2 3 4 5 6 7 8 9 10

1. Vertically, the pendulum beats in vertical waves between the dots and the numerals that represent the number. Law of Similars (extension of the Law of Newton).
2. In the line of the dots, the pendulum beats as on the line of numerals, indicating that there is a wave that travels between them.
3. If one exchanges two numerals or even two groups of dots, the phenomenon ceases.
4. With vertical positive needles, there are movements of the pendulum only on the even numbers (or on an even series of dots). With negative vertical needles, only on the odd numerals (or their dots).

Conclusion: The Arabs have found the even numerals and the odd numerals, their continuity and their order of emission of waves, *the natural decimal system*, and this law follows indefinitely for the numerals, with ten designs of which the combinations give the series of numbers until infinity.

Note: We could replace the line of dots with a line of dashes (or of holes) in the same number, and the law remains true.

Later in the text he uses the “Series Point” technique (which we will not be using in this class; it was a technique popularized by Abbe Mermet, in which the pendulum calibrated to a specific string length makes a specific number of movements before reversing, thus revealing a “series number” associated with what is being tested) to test the Arabic Numerals vs. Shapes.

In this project, he tested the series number created by archetypal shapes which had specific numbers of sides: four sides for a square, five sides for a pentagon, etc. He then drew the Arabic numerals related to that number (the number 4 for a square for example) and then put that drawn number where the nodal points that shape would be; for example a 4 at each of the four corners of a square, but with no lines connecting them.

He found that the series number given by the drawn shape, and by the Arabic numeral for that number drawn at the nodal points defining that shape, were identical. If he replaced the numbers used at the nodal points with an Arabic numeral which did not match the number of sides of the shape, it did not work. This again demonstrated the vibrational effects created by the shape of the Arabic numerals.

4. A rectangle or four figure 4's give the series 4:

Figure 9

5. A pentagon or 5 figure 5's at the vertices give the series 5:

Figure 10

6. A hexagon or 6 figure 6's give the series 6, and so on.

Figure 11

5. COMPLETE LIST OF LOUIS TURENNE'S RADIESTHESIA RESEARCH PUBLICATIONS: 1931 - 1976

[Below is the translation of a section appearing in Turenne's 1950 book *Radio-Disintegration*.]

BOOK 1 (green cover), 1931. – Forms of rods and pendulums. Matter, physics instruments reproducing movements of the rod and pendulum. Magnetism. Solenoid magnets, spectra, directions of rotation. Antenna carrier waves. Carrier waves. Pendular waves. Veins of water. Pockets.

BOOK 2 (red cover), 1931. – Light. Colors. Seven colors of the spectrum. Wavelengths. Infra and ultra. Frequencies of colors. Action of the colors on microbes, venoms, poisons, illnesses. Cancer. Green light.

BOOK 3 (orange cover), 1933. – Law of Similars, *the most important law in radiesthesia*. Illness-waves. Witnesses. Turenne bridge. Radium. 92 elements and their waves. Shock waves. Waves of the organs. Illnesses. Remedies. Homeopathic dilutions. Waves of mushrooms. Plants. The chlorophyll function. Wave mechanics.

BOOK 4 (violet cover), 1934. – Water. Zoology. Botany. Summary of discoveries made in 1934. Diffraction. Disk of colors, metals, 92 elements. Measurement of waves. Adding magnetized pointers to rods and pendulums, perfectly. Witnesses. Classification of elements by families of waves. Analysis by waves. Water. Research on subterranean waters. Mineral waters. Quality, depth. Direction of movement. Rate of flow.

BOOK 5 (chamois cover), 1935. Minerals. Waves of form. Reading on plans. Toxic waves. Horizontal and vertical electro-magnetic waves. Veins of water, dry faults, pockets of water, cavities. Witness 93. Suppressions

of waves in closed boxes.

Extraordinary experiments of the Persians. Contaminated houses. Turenne Disks. Universal Ruler for all measurements. Series. Research on minerals, metals, petroleum, treasure, etc.

Crystallography with tables. Waves of geometric forms, points, straight lines, angles, circles, squares, common curves, etc.

Rainbows. Measurement of waves. Reading on plans and photographs. Evolution of matter. Instruments of protection against toxic waves. Radio-disintegration. Radio and radiesthesia are sisters. Spider pendulum and solenoid pendulum. Heavy waters in mineral waters. Map and table. Photography of waves.

BOOK 6 (white cover), 1942. – Waves of the Arab numerals. Series. Families of 7. Heavy waters. Mineral waters. Human waves. Proofs and challenges.

The marvel of Arab numerals. Series. Saturation. Desaturation. Arithmetic operations by radio-disintegration and tested geometric drawings. Families of 7. Proportions in nature. The Divine Proportion. Golden number. Chinese Ba-Gua. Tibetan chakras. Ancient forms.

Atomic disintegration and series. Principal series. Disintegration by the sun, the moon, by shock waves, radium, etc.

Heavy waters and mineral waters. Their electrons. Green water. The three heavy waters of health and their actions. Human waves, waves of emission, reception. Tests on persons by measuring instruments. Curves of health. Rural hygiene. Waves from hands. Ruler of tension, pH, red blood cells. Rule of the three favorable heavy waters. Measure of neurasthenia and of folly.

Experiments in chaos concerning mathematics. Physics, waves of form. Pharmacy and medical analyses. Chemistry. Biology. Geology. Phenomena of disintegration. Mummification.

The hunt. – The three planes of induction of criminals and hunting dogs. Artificial hunting indoors. Hunting on a map with rod and pendulum. Objections to radiesthesia. Challenges. Advice to students.

BOOK 7 (gray cover), 1943-1950. – Radio-disintegration in light of all the sciences.

Mathematics. – Decimal system. Forms of 11 and 12. Spectra. Arithmetic calculations with the pendulum. Incommensurable numbers.

Numbers without series. Parentheses. Continuous series, discontinuous, interrupted.

Physics. – Foucault and his pendulum. Waves of form. Effects of ice. Infra, ultra. Waves from phonographs. Spherical magnet. Three electricities. Faraday cage. Coiling direction of waves. Table of the Elements and electronic classification. Infra, ultra of families of 7. The moon and its cross. Stopping the pendulum at distance.

Chemistry. – Trans-uraniums and void 124. Their drawings on rulers, disks, and geometric curves. Ba-Gua transformations into compasses. The series of series.

Disintegration. – Mummification. Spectrum of disintegration. Waves from the eyes. Cross of seven points. Catalyst. Waves of radio receivers. Mummification by different emitters of waves.

Pre-medicine. – The 44 metals in the human body. Metals used in illnesses, organs, plants, remedies, foods, cerebrum, cerebellum, skin, etc.

Medicine. – Examination, prescription, and care with medications of the discovered illnesses.

Radiesthesia. – Detection of metals, measure of waves of physics. Giving catalysts, without medication, permitting the uptaking of metals in the atmosphere. Balance of waves in the human body. Atomic void in the cells, even for persons without illness. Toxic waves. Rule for tension, pH, red blood cells. Rule of seven functions, heavy waters, measures of physics. Witnesses of metals and new illnesses. Goatfish (red mullet). Ditches. Lympho granulo in the houses of man and the rabbit. Vitality. Determining gender before birth.

Pharmacy. – Waves of hemoglobin and chlorophyll. Waves of medicinal plants, their metallic names. Homeogenes. Mushrooms. Vitamins. Hormones. Toxicology. Transport of illness waves. Electricity. Poisons. Venoms.

Chemistry. – Electrons and Arab numerals in chemical formulae. Qualitative and quantitative analyses. Infinitesimal analysis of water. Mineral water. Bad water. Meteorite powder.

Geology. – Quartz. Feldspar. Mica. Their waves. Stones named by metals. Rocks and minerals. Geologic studies at Creuse and HauteVienne. Enigma of the Pacific Ocean.

Astronomy. – waves of the stars. Solar, lunar and terrestrial Ba-guas. Their rainbows. Meteorological observations.

Archeology. – Egypt and the Pyramids. The number 7 in antiquity. The pyramid pendulum. Waves of ancient signatures. The zodiac. Studies on four Egyptian steles.

BOOK 8 (not yet finished at this time, but it will contain the completions of these studies on all the sciences already studied with many more new experiments.)

Scientific articles regarding the results of our experiments. Complementary experiments on mathematics, physics, and the laws of electronics. Ba-Gua and families of 7, chemistry, human waves, pharmacy, botany, geology, ancient science.

Reading on the plan on Michelin maps, on photos, on anatomical charts, engravings, etc. I am also preparing a complete book on pre-medicine.

New patents. – on reading on the plan, vertical cuts on the plane. Tracings of the unproductive areas in mines on vertical cuts. Determination of the best points for postponed surveys on the map or the plan.

Witnesses. – We will be able to furnish more than 1200 different witnesses without contaminating interference and which will never discharge.

NOTE 1: The above list is taken from 1950 book *Radio-Disintegration*.

After this the next book in our collection is a 1962 book which says it is *Book X: Final Wave Studies*. The foreword by Turenne's wife indicates that he had died sometime in 1959 or before, and that this book of his final research was being published after his death.

The final book in our collection is the posthumus 1976 overview book *Scientific Radiesthesia: A Complete Introduction*. The introduction to this book is by R. Felsenhardt and states:

"We are indebted to the kindness of Turenne's heirs, and in particular, to his *collaboratrice*, Madame Massa, for having recovered the instructions that he dispensed to his students. We publish them now, not in order to convince, which we already know is impossible, but in order to create better understanding of the work of those whom he inspired: Chaumery, de Belizal, and more recently, Jean de La Foye.

Whether or not one accepts physical radiesthesia, one must judge by the evidence, and this book will help you do that."

NOTE 2: The most complete collection of descriptions and pictures of Turenne's Rulers and instruments are at the end of the *Radio-Disintegration* collection book from 1943-1950.

6. SUMMARY OF THE DISCOVERIES OF LOUIS TURENNE

For the purposes of this training, the key concepts for you to remember from this survey of Turenne's discoveries are the following:

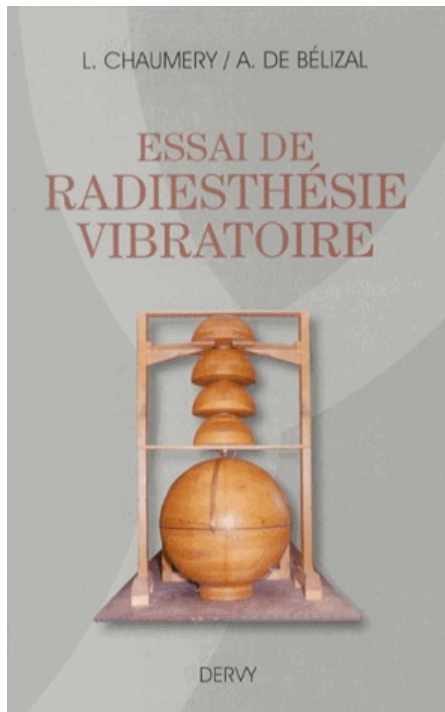

1. **The foundation of the Vibrational Spectrum was established, using a system of 11 Bands which would remain in the later completed model of the Spectrum** (Black, Infra-Red, Red, Orange, Yellow, Green, Blue, Indigo, Violet, Ultra-Violet, White) and then the further extensions of Black and White at the end of the linear Spectrum which he called "Infra-Black" and "Infra-White". These last two extensions would be transformed in the later work of de Belizal and Chaumery into the final component of the 12-Band Vibrational Spectrum, which they called "Negative Green."
2. **Each Band of the Spectrum was not simply a visible color; they emanated from all phenomena, usually as invisible radiations** with the same qualities as the color. To be able to test or generate each band through the "Law of Similars", Turenne found specific angles which were linked to the bands (just as refraction of white light in a prism gives different colors based on the angle of refraction.)
3. The Waves of each band could move in space in a Horizontal or Vertical Direction. Turenne created a pendulum to test these Horizontal and Vertical Waves, and discovered that **most healthy phenomena were linked to Horizontal Waves. Vertical Waves in the Human Being or most other living beings were linked to illness, and to the amplification of toxic microbes and poisons.**
4. However there were some necessary Vertical Waves in the human system, linked to specific functions. Although it can be said that **although generally Vertical Waves are harmful to most living beings, there are exceptions.**
5. Turenne found that **Electrical phenomena was primarily linked to Vertical Waves, and Magnetic phenomena to Horizontal Waves.** This would later become the concepts of "Electric and Magnetic" Waves in the work of de Belizal and Chaumery, which were functionally equivalent to the Vertical and Horizontal Waves of Turenne.
6. Turenne used conceptual models based on Wavelength (as is the case in mainstream Physics today) to describe the functions of the Bands in the Vibrational Spectrum. However more recent work by Dr. Ibrahim Karim, founder of BioGeometry, has demonstrated that the true functions of the Bands can only be understood by their energy qualities and the resonance these qualities have with various phenomena which are of the same quality; **the wavelength model is insufficient, and has been replaced in recent times with Dr. Karim's "Physics of Quality."**

7. Turenne used his Vibrational Radiesthesia skills to **identify the invisible waves generated by different Shapes, and the effect these waves had on living beings.**

He discovered that classical traditions around the world knew aspects of this hidden vibrational science and engineered precise vibrations into the geometric patterns they used. This work included analysis of:

- * the shape of the Arabic Numerals
- * emanations from different Geometric shapes
- * the vibrational quality of numbers
- * the Bands generated by different forms of the Chinese BaGua
- * the vibrations of patterns used in the Indian spiritual tradition, etc.

C. DISCOVERIES OF DE BELIZAL AND CHAUMERY: COMPLETION OF THE VIBRATIONAL SPECTRUM

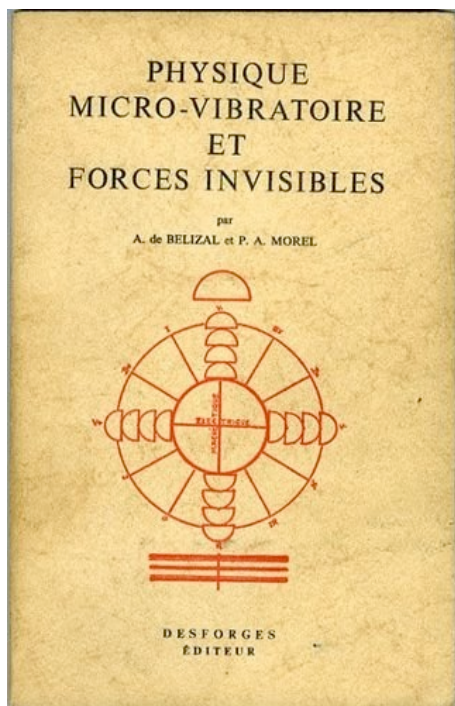

The first book by Léon Chaumery and Andre de Belizal was published in France in 1939, under the title *Traité Experimental de Physique Radiesthésique* (Treatise on Experiments in Physical Radiesthesia). The book was later reissued with expanded contents and updated research with the new name *Essai de Radiesthésie Vibratoire* (Trials in Vibrational Radiesthesia).

After the tragic death of Léon Chaumery, de Belizal published a second and final book in the 1960's with his new coauthor, P.A. Morel, entitled *Physique Micro-Vibratoire et Forces Invisibles* (Micro-vibrational Physics and Invisible Forces).

These titles have been in print for many years and are still available in French.

As with our survey of the work of Louis Turenne, this overview of the work of de Belizal is quite simplified.

We will focus our attention on the aspects of de Belizal's discoveries which are the most relevant to the topic of this training:

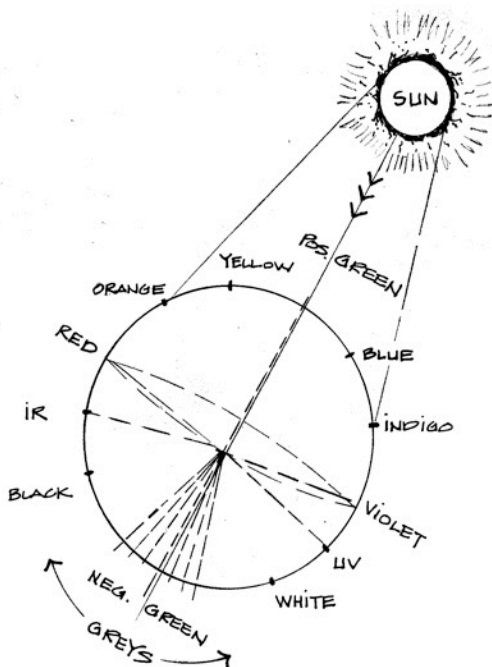

1. The Completion of the Vibrational Spectrum.
2. Differentiating the Beneficial from the Harmful Waves.
3. Vibrational Spectrum Testing Tools
4. Vibrational Testing of the Natural World

6. Summary of the Discoveries of de Belizal

1. THE COMPLETION OF THE VIBRATIONAL SPECTRUM

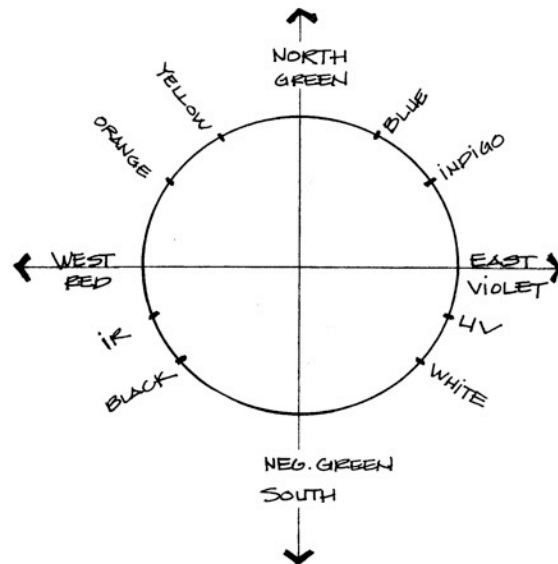

Starting around 1932, de Belizal and Chaumery began exploring the area of the spectrum identified by Louis Turenne as the “infra-black” and “infra-white” areas on the opposite two ends of his linear spectrum.

From 1932 to 1934 de Belizal and Chaumery identified the energy quality present in this area which lay beyond the Black and White bands. They transformed the linear spectrum of Turenne into a circular spectrum, testing how the complete spectrum formed on different geometric surfaces.

ON A SPHERE, COLORS MOVE WITH THE SUN

ON A 2D CIRCLE, COLORS ARE RELATED TO THE COMPASS POINTS

TESTING THE CIRCULAR SPECTRUM

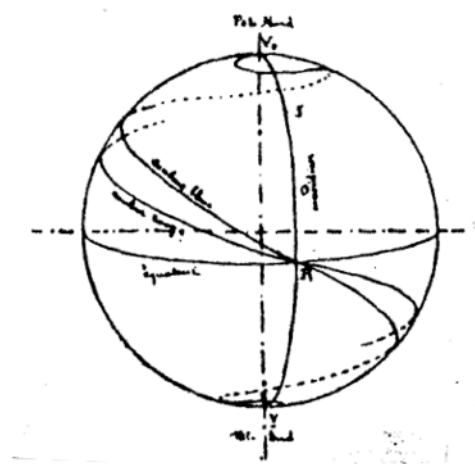

In Sacred Geometry the Sphere is the perfect form; every point on its surface is equidistant from the center.

De Belizal and Chaumery tested how the energies of the Vibrational Spectrum moved over the most uniform of surfaces, the Sphere in 3-D and the Circle in 2-D. On the surface of a sphere, the primary energy movement source location is marked by the

invisible vibration of the “Green” quality. This became an emanation point for creating the entire spectrum forming over the surface of the sphere. This created a complex pattern of spiral propagation of the different bands over the sphere.

[Note: Dr. Ibrahim Karim, founder of BioGeometry, has clarified the principle of the “Energy Key”: this is the primary ray of energetic movement creating the spread of the 12 bands around it. The primary energy key for 3-Dimensional objects, including the Sphere form, is the Sun; directly beneath it, where its energy ray strikes the object, is the Positive Green Energy Quality. The ray penetrates through the solid object and emerges out the other side with the Negative Green Energy Quality. The picture above shows the basic principle in simplified form; the Green energy quality is directly beneath the Sun’s position, ie at the location where the ray of energy moves into the object and then through the object, and the other Bands form up equidistant around it.]

The picture below illustrates the more complex aspect described by de Belizal, of the Vibrational Bands’ spiral movement over the surface of the sphere.

On a flat 2-Dimensional surface, de Belizal and Chaumery found that the North - South magnetic line of the Earth determined the placement of the bands. This is shown in the illustration on the previous page. A circle drawn on a piece of paper, or simply drawing a circle in the dirt on the Earth’s surface, demonstrates that the vibration of Green appears toward magnetic North. A simple drawn circle can thus be used like a magnetic compass to determine directions, because magnetic north will be marked by where we can detect the invisible vibration of Green on the circle, when using Radiesthesia testing equipment.

THE MEANING OF THE NAME “NEGATIVE GREEN”

With the spectrum converted now from the linear format of Turenne to a circular format, de Belizal and Chaumery focused their attention on the area directly opposite the Green Vibration on the Sphere or Circle. This was the area which had been termed the “Infra-

Black” and “Infra-White” by Turenne, but now that they were projected onto a circular surface these two qualities were revealed to be connected together.

Through testing the Polarity of the Green vibration area on the sphere, and then the area opposite Green on the far side of the sphere, they found that the Green area gave a positive, clockwise spin to their pendulum; the opposite area gave a negative, counter-clockwise spin (this practice is essentially the same as the Polarity testing method you learned in our first class in this training series, the ***Personal Wavelength.***)

They then named the area opposite Green on the circular spectrum “Negative Green” and the original Green area thus became “Positive Green” to reflect their polarities.

Unfortunately this name of “Negative Green” has caused confusion ever since amongst people not well trained in French Radiesthesia methods; often being confused for something that has a Green appearance, or that this energy is “negative” in the sense of all bad. In reality Negative Green does not have a visible Green appearance (the Green color quality is the exact opposite quality of Negative Green; in fact it is an antidote for it) nor Negative Green it all bad; like every one of the 12 bands in the spectrum, it has both beneficial and detrimental components.

Some French researchers would later use the term “Radiesthesia Grey” to refer to the same area which de Belizal and Chaumery named “Negative Green” because this area is between Black and White, ie Grey.

However this name did not catch on the way “Negative Green” did, so despite the confusion created by that term it is how this Band of Vibration is commonly referred to by Vibrational Radiesthesiasts.

THE POWER OF THE NEGATIVE GREEN BAND

De Belizal and Chaumery set out to explore the actual qualities of this mysterious Negative Green vibration. They found that it had the most highly penetrating energy in the entire Vibrational Spectrum, having the capacity to penetrate thicknesses of Lead which could not be penetrated by X-Rays.

Similar to the concepts held by Turenne regarding wavelengths of the Vibrational Bands, de Belizal and Chaumery considered Negative Green to be the shortest wavelength in the Vibrational Spectrum; they considered this shortness of the wave to be what gave it the most penetrating power of all the Bands, just as the ionizing radiations (such as X-Rays, Gamma radiation etc.) are the shortest and thus the most penetrating waves in the Electro-Magnetic Spectrum.

[Dr. Ibrahim Karim has critiqued this explanation of energy qualities by means of physical wavelengths as being a fundamental error made by the French Radiesthesiasts. He has cited compelling evidence that the Negative Green energy quality has to be understood qualitatively and *not* as a physical wave of a given fixed length. **However the empirical functions and effects of the Negative Green ray observed by de Belizal and Chaumery are correct.**]

De Belizal and Chaumery came to understand the penetrating power of Negative Green as one of its primary natural functions: it is nature's premier Carrier Wave, able to transmit any type of energy or information -- whether beneficial or detrimental -- straight through solid matter. It would later be discovered that all modern Electro-Magnetic technologies transmit energy using the Negative Green vibration; thus all modern EMF devices radiate Negative Green (unfortunately with an emphasis on the detrimental aspect of that Vibration, as we will see later.)

THE COMPLETION OF THE VIBRATIONAL SPECTRUM

With the identification of the Negative Green Band, the Vibrational Spectrum was completed. As seen below, it contains 12 bands, 7 of which are the standard 7 colors of the rainbow (Red, Orange, Yellow, Green, Blue, Indigo, Violet) then just as with Turenne the Violet goes to Ultraviolet and White, and the Red going to InfraRed and then Black. Now between White and Black, the Negative Green vibration was added.

It is important to emphasize the following points:

- * Although given the names of Colors, each division (Band) of the Vibrational Spectrum is in fact a transcendental energy. It may manifest into physical reality as the

emanation from a Color, a Sound, an Angle, a Shape, a Proportion, etc. or it may be entirely invisible.

* These Vibrational Bands often are present in a completely invisible form, as a wave which affects all living beings yet which can only be detected by specialized Radiesthesia tools, just as invisible electro-magnetic waves can only be detected by meters designed to detect them.

* The average human being has no sense organ to perceive these invisible Vibrational waves, yet they affect our health, energy, and consciousness in a profound way all the time -- below the level of our conscious awareness. The practice of Vibrational Radiesthesia can not only allow us to detect these invisible influences through our Radiesthesia tools and methods; these practices can also entrain us to develop new organs in our subtle bodies to directly perceive these invisible waves after much practice time, even without the use of the tools.

However it is important to understand that the use of the tools is vital for properly entraining our energy field to perceive these vibrations accurately; the tools keep us focused on the correct precise vibration, until the entrainment process is complete and the new organs are imprinted and stabilized in our subtle bodies.

This entrainment / development of subtle organs requires an extended period of regular practice; it is common in our modern impatient culture that many students try to move too quickly beyond the tools and just start testing the vibrational bands based on their own inner perception. I have seen time and again that this results in the student ending up simply testing their own energetic projections and thoughtforms, not getting accurate information about the true qualities of the energy fields they are supposed to be testing.

* Negative Green is an invisible wave which has no visible color manifestation. The closest color that we can perceive with our eyes to its quality is Grey. There are interesting German language works which posit that Grey is a color which we do not yet have a sense organ to fully perceive, but which we will be able to perceive visually at some future point in evolution. If accurate, this would mean that our relationship to Grey currently is similar to a color blind person's relationship to color; they can only perceive color as shades of black and white, yet the color is there even if their sense organ cannot pick it up.

* De Belizal would sometimes continue to use the terms "infra-black" and "infra-white" in his studies regarding the areas moving from Black or White towards Negative Green; but for practical purposes those earlier terms from Turenne were replaced with the addition of Negative Green as the final, 12th Band in the Vibrational Spectrum.

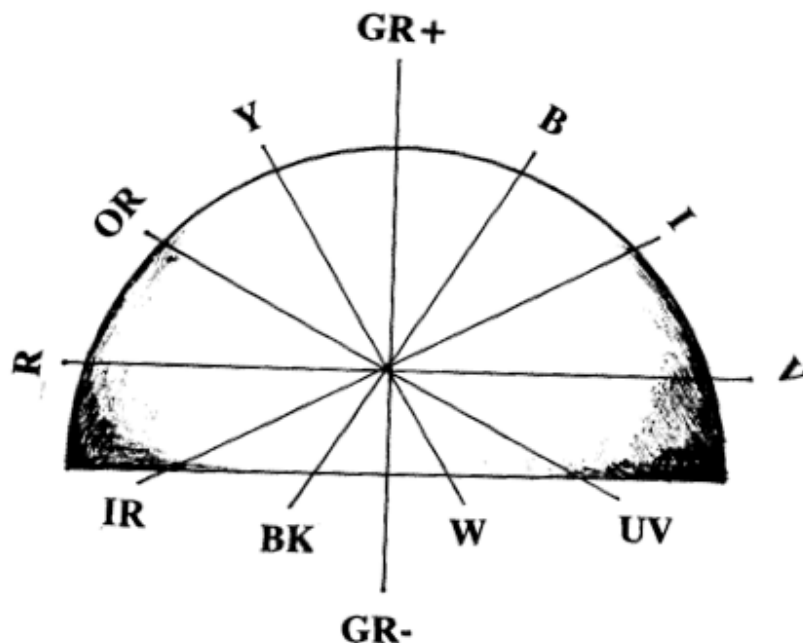

*** A shorthand way of expressing "Positive Green" is either +G or G+; a shorthand way of expressing "Negative Green" is either -G or G-. We will be using these abbreviations at times in the remainder of this training series.**

RESEARCH METHODS TO STABILIZE AND CONCENTRATE THE NEGATIVE GREEN BAND

Chaumery and de Belizal wanted to concentrate the Negative Green energy which they had discovered, in order to study it further. However on a Sphere the placement and intensity of Negative Green could vary.

They found that if they cut the sphere in half, they could stabilize the Negative Green emission from the base of the Hemisphere (this method is referred to in modern BioGeometry® as the creation of “Fixed Polarity Geometrical Emitters”).

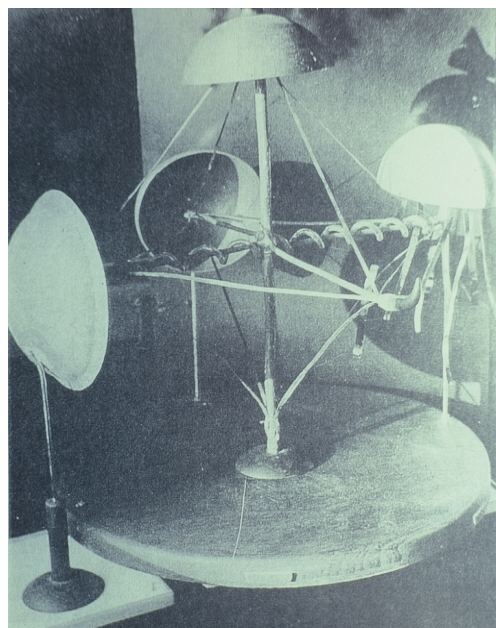

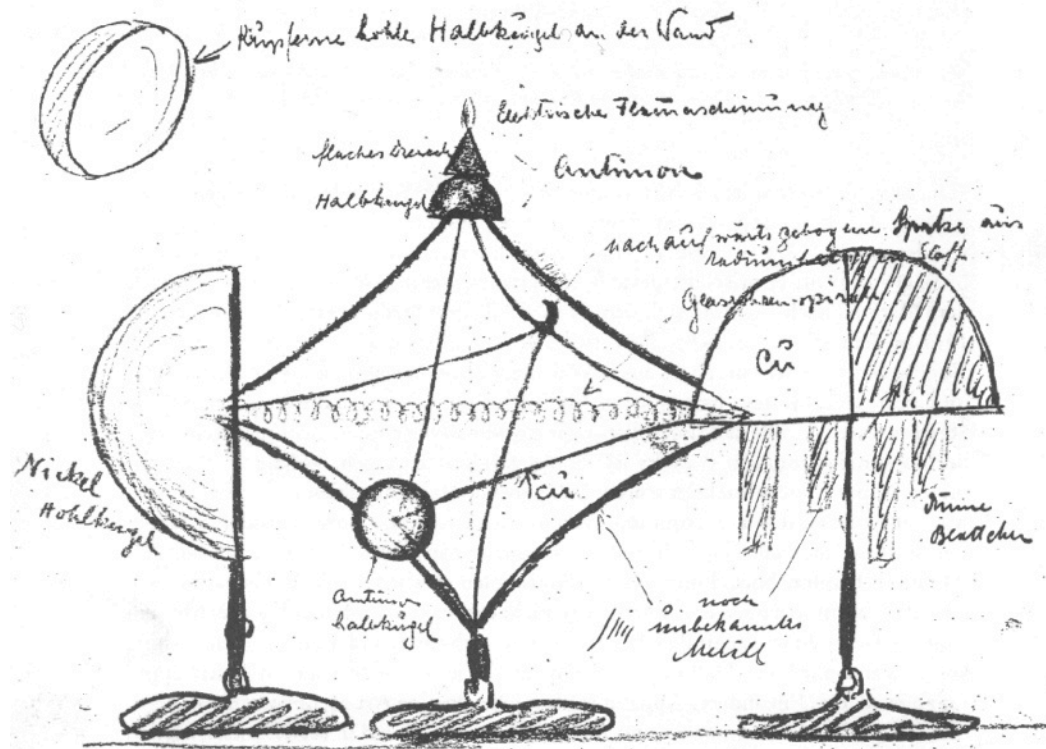

When the Sphere is cut in half into a hemisphere, the top of the dome has +G and -G will always be emitted out of the base. The other bands will form in a spectrum around this axis. The use of hemispheres allowed Chaumery and de Belizal to study Negative Green, and to concentrate it though using multiple hemispheres in a linear series.

The knowledge that the powerful, penetrating energy of Negative Green is emitted from the base of a Hemisphere appears to be something held as a secret in Spiritual Traditions. We will see examples of this later in this section, drawn from the research of de Belizal.

An interesting illustration of this secret knowledge of the power generated by the Hemisphere can be found in the work of Rudolf Steiner. In Steiner's "Mystery Dramas" there is an important character in the play known as Strader. Strader is a person who creates new Etheric Energy technologies, what we would think of today as "free energy"

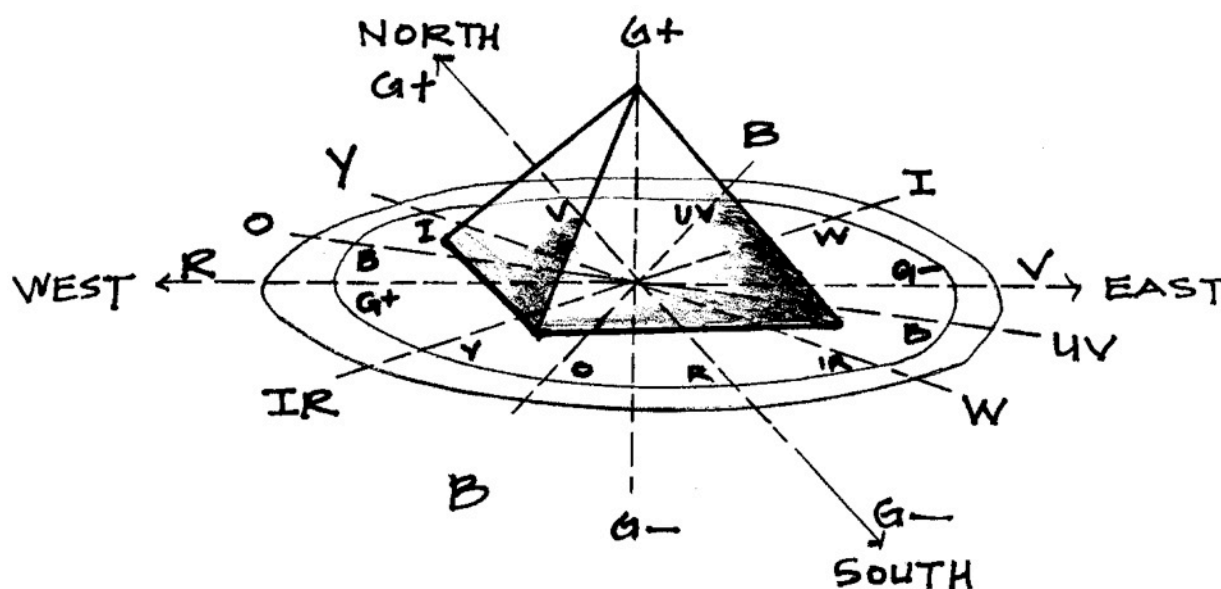

devices. Steiner was asked how the stage model for the Strader Device should be constructed; in answer he drew the illustration below, showing multiple hemispheres placed at different nodal points of a pyramid form. Below that is a photograph of the completed stage model of the Strader Device.

Steiner's model of a new Etheric Energy technology was based on the forms of multiple hemispheres around pyramid structure (actually an Octahedron, the Platonic Solid in Sacred Geometry which has the form of two pyramids connected base to base.)

This suggests that Steiner had knowledge, decades before the research of De Belizal and Chaumery, of the energetic radiations from the hemisphere form.

Interestingly, a pyramid is functionally identical in its basic Vibrational Spectrum formation to a hemisphere or dome. This means that the pyramid gives +G at the apex and that -G is emitted from its base. This would prove to be a vital key in unlocking the use of the pyramid in ancient spiritual initiation. The -G emission serves not just as a physical plane carrier wave, it also is a "spiritual carrier wave" connecting spirit and matter, as will be discussed in the later section on Enel. In ancient times, the pyramid was used as the geometric form for places of initiation, in order to provide the needed -G emission; today it is most common to find the dome (hemisphere) used as the preferred geometric form in churches, mosques, synagogues, and other Temples. Both create the -G carrier wave needed to connect the physical sacred site to the higher spiritual plane.

Two complete spectral decompositions are shown around the pyramid above, in this illustration based on a diagram in de Belizal's first book. These are: 1) as shown on the outer circle above, a spectrum manifested by the North-South Magnetic Line, and 2) a second decomposition shown on the inner circle, related to the form of the pyramid itself.

Chaumery and de Belizal were fascinated by the penetrating power of Negative Green, and very proud of their discovery of this final Band in the Vibrational Spectrum. They wanted to concentrate the Negative Green energy further in order to study its potential effects, and did so by creating linear arrays of hemispheres stacked one above the other. The picture below shows de Belizal with an experimental array of wooden hemispheres above wooden spheres.

Unfortunately, these multiple hemisphere arrays are not safe, because of their concentration of the Vertical Wave of Negative Green -- the most dangerous energy quality in the entire Vibrational Spectrum.

The consequences of this Negative Green concentrations created by Chaumery and de Belizal's experiments will be discussed in the next section, after we survey their understanding of the beneficial and detrimental components of each Vibrational Band in the Spectrum.

2. DIFFERENTIATING THE BENEFICIAL FROM THE DETRIMENTAL WAVES

All of the Bands in the vibrational spectrum were shown by Turenne to have two components, a generally harmful Vertical Wave and a generally beneficial Horizontal Wave. Turenne also noted that electricity was primarily a Vertical Wave phenomenon and magnetism primarily connected to Horizontal Waves.

In the works of de Belizal, the detrimental component of each Band was referred to as the Electric Wave, and the beneficial component as the Magnetic Wave.

Chaumery and de Belizal also explained their use of the terms “Electric” and “Magnetic” waves in terms of observations they had made in a series of experiments regarding what substance could block the different Waves.

The “Electric” Wave was found not to cross electrical insulators such as porcelain and Bakelite, whereas it did penetrate iron shielding.

The “Magnetic” Wave, on the contrary, was found to be blocked by iron screen but not by electrical insulators.

It is important to emphasize that de Belizal’s use of the terms “Magnetic” and “Electric” to designate the different types of waves in each Band is *not* the same as the technical meaning of Magnetic and Electric in physics. He chose the names based on which waves could pass through either Magnetic or Electric insulators, but that does not make them identical to mainstream use of the terms Magnetic and Electric today.

For our purposes in this training we can treat Turenne’s “Vertical Waves” and de Belizal’s “Electric Waves” as interchangeable terms; although they do have technical differences, both indicate the detrimental aspect within each of the 12 Bands.

Similarly, we will in this training treat Turenne’s “Horizontal Waves” and de Belizal’s “Electric Waves” as interchangeable terms; both indicate the beneficial aspect of each of the 12 Bands.

For the majority of this training, we will simply use the term “Vertical Waves” to refer to this detrimental component in each of the 12 Bands, and “Horizontal Waves” to refer to the beneficial component.

Simply put, Vertical waves are usually detrimental to living beings, and Horizontal waves are beneficial. Many living things in the natural world, such as most plants, animals, and humans intrinsically emanate the horizontal wave and not the vertical; however, vertical energies in the environment can be lodged in the energy fields of living beings

and cause disruption to their natural energy balance, causing illness.

It is also possible for conscious beings to generate harmful Vertical Waves through internal states of destructive thought and emotion; this is very much the case with human beings, who intrinsically are connected to Horizontal Waves but who commonly generate extremely harmful Vertical Waves through their own detrimental thoughts, feelings, and actions.

All EMF radiations in our modern technology -- coming from 60 Hz Home Power electricity, microwaves, radio waves, including ionizing radiation like X-Rays and Gamma Rays -- have a Vertical Wave component. They usually also have Horizontal Waves, however it is the Vertical Wave which is the harmful element.

Louis Turenne described how illness-causing micro-organisms (viruses, bacteria, etc.) have a vertical component. For purposes of our non-Medical approach in Vibrational Radiesthesia, we can say that Vertical Waves in the human energy field indicate some type of energetic disturbance and / or an out-of-balance condition.

RESEARCH ON VERTICAL AND HORIZONTAL WAVES OF NEGATIVE GREEN

Chaumery and de Belizal did extensive research into the essential nature of the Negative Green Band which they had discovered.

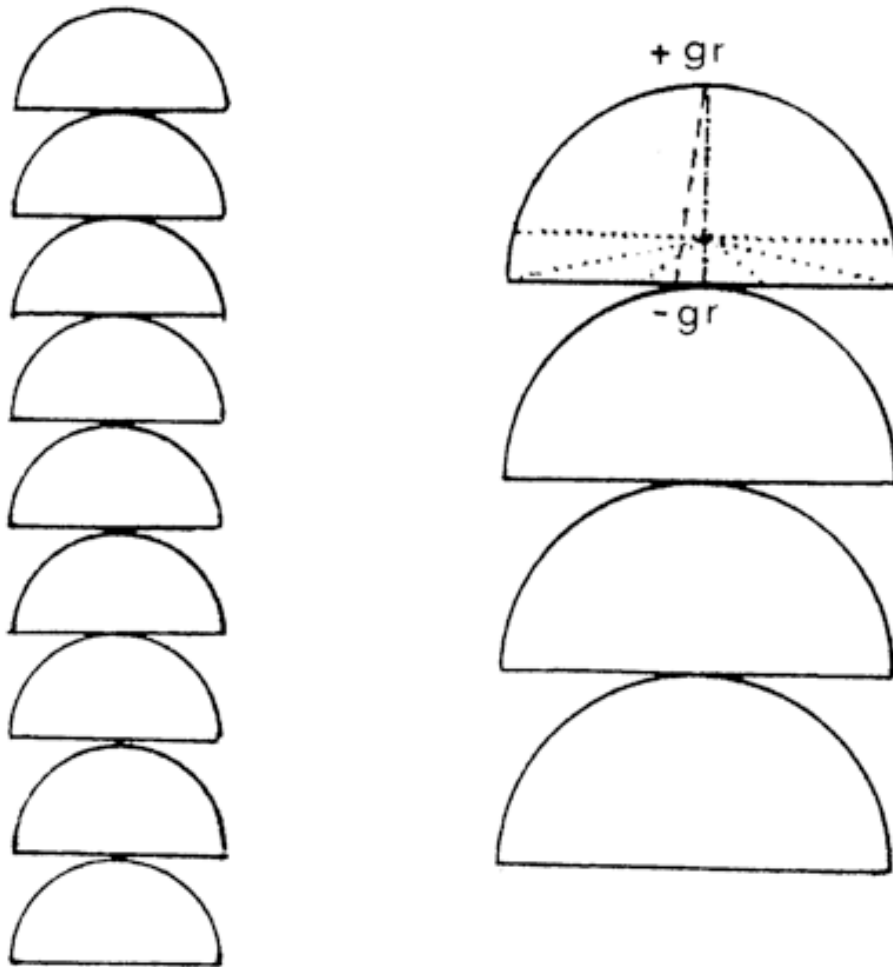

They created stacks of hemispheres, aligned one above the other, in order to concentrate and direct the emission of -G. With all of the stacked hemispheres having their bases in the same direction, the cumulative -G coming out of the based of the collected array became very potent.

Stacked arrays of hemispheres (or other forms, such as pyramids) for concentrating and directing their energies were called "piles", "batteries", or "end-fire arrays" by the French Radiesthesiasts. This principle of concentrating energy through stacking specific forms as a "battery" was shown in the research of Chaumery and De Belizal to have been well known and applied in ancient traditions.

De Belizal and Chaumery used analogies with electricity to describe the energetic principles of these geometric form "batteries"; the number of hemispheres determined the "voltage" in the battery whereas the diameter of the hemispheres governed the "amperage".

The terms "voltage" and "amperage" here are of course metaphors; the energies generated by the stacked geometric forms cannot be measured by standard EMF meters. However these energies can easily be detected through Vibrational Radiesthesia, and can have extremely potent effects -- for good or for ill -- on human beings subjected to these vibrations.

De Belizal and Chaumery came to the conclusion that the level of intensity of -G generated by a four hemisphere stack was roughly equivalent to the natural level of intensity of an average human being's energy field. This led them to conclude that the maximum "safe" number of stacked hemispheres for direct application to humans was four. However in their experimental work they went into much higher numbers of stacked hemispheres than that. They would also use a higher number of hemispheres for short-term "shock treatment" types of applications to humans.

The photo below of de Belizal in his laboratory shows the large size -- and high number -- of hemispheres used in their research.

Chaumery was fascinated with the strange power of -G. As noted earlier, it is extremely penetrating, with the ability to go through thicknesses of lead shielding capable of blocking X-rays.

Negative Green -- particularly the Vertical wave -- is dehydrating, and capable of “mummifying” living tissues; with this power it can suspend organic processes, such as the decomposition of foods. The mummification effect of -G is commonly associated with the pyramid form, which makes sense given the fact that the pyramid is a natural geometric emitter of -G. The well known effects of “Pyramid power” -- milk remaining sweet and not spoiling, meat not rotting, and so on, is related to the “mummification” effect of -G.

Chaumery and de Belizal applied this “mummification” effect to their experiments with healing cancer, applying -G to cancerous tumors in order to stop their growth. This is not recommended today because it can be quite dangerous; however it is important to understand this as historical background to our modern work.

With the research of Leon Chaumery particularly focusing on the creation of multiple hemisphere “batteries” to concentrate -G, this unfortunately also had the effect of

concentrating the toxic Vertical Wave component of -G.

THE DEATH OF LEON CHAUMERY

The fate of Léon Chaumery was similar to that of other pioneers exploring new forms of energy. Just as the French scientist Madam Curie met her death by radiation exposure from radium (at that time, no one understood that radium emitted lethal radiations), so was Chaumery killed by exposure to concentrations of the Vertical Wave of -G.

Although Chaumery knew how to differentiate the Vertical and Horizontal Waves of -G, the book he co-wrote with de Belizal left out vital information about the Vertical Wave of -G, including how to differentiate between the Vertical and Horizontal Components when testing with their “Virtual Cone Pendulum” detector (described in the next section of this training.) Because of this, there are still people today who sell versions of the Virtual Cone Pendulum which do not have the design feature which allows the user to differentiate the Vertical from the Horizontal Wave of each Band.

It would appear that Chaumery and de Belizal did not fully understand how to cancel or transmute the detrimental Vertical Wave of -G for many years.

Léon Chaumery was found dead in his laboratory by his friend de Belizal on February 27, 1957. De Belizal published a warning about the power of -G in his foreword to his second and last book (*Physique Micro-Vibratoire et Forces Invisibles*, written with P.A. Morel), stating that Chaumery:

“had been in effect a victim of his experiments and completely dehydrated by the negative green ray. At that time we had not yet found the vibrational antidote...”.

This vibrational antidote which de Belizal found with P.A. Morel was the use of the Positive Green (+G) energy, which de Belizal believed “neutralized all stored radioactivity in the organism.” (Quotes from p. vii of the 1976 edition of *Physique Micro-Vibratoire et Forces Invisibles*).

Since the Positive Green Band is the opposite polarity to Negative Green, it has a cancellation effect on -G.

As de Belizal noted, Chaumery had essentially been killed by the mummifying, dehydrating effect of the Electric (Vertical) wave of Negative Green because of the many emitters he had constructed. The death of Chaumery had a chilling effect on what remained of Scientific Radiesthesia circles in France, helping lead to the rise of mental/psychic dowsing as the pre-eminent form of Radiesthesia in France and the further decline of the great French scientific dowsing school.

It is important to note that Dr. Ibrahim Karim’s work in modern BioGeometry has eliminated the use of multiple hemispheres, and corrected other unsafe procedures

used by the early French researchers. New methods of safe practice with Vibrational Radiesthesia have been developed. Dr. Karim also developed the new method of transmuting the harmful qualities of Vertical Wave of -G, which will be described in the upcoming section on his work.

DEEPER ASPECTS OF LEON CHAUMERY'S DEATH: RESONANCE

Most Radiesthesists assume that Chaumery's death by -G came by his being directly in the line of emission of the concentrated radiation coming out of the multiple hemisphere battery arrays in his lab and / or that the multiple emitters concentrated too much vertical -G into the ambient environment of the room.

We should mention however an important insight coming from Dr. Ibrahim Karim. Dr. Karim believes that Chaumery would have been well aware of the -G emissions from his devices, and that he would likely not have put himself carelessly in the way of these emissions.

Dr. Karim notes that the perspectives on these vibrations that were held by Chaumery (and made clear in the book he co-wrote with de Belizal) were unfortunately overly simplistic and materialistic, as is true of most researchers of the French Radiesthesia school.

Even today, most people in Vibrational Healing and esoteric research think in a reductionist manner, in terms of "emitting energy and receiving energy" as only a finite and direct energetic interaction. One who thinks in this way would naturally assume that merely keeping away from the direct emissions of these devices would leave one safe from their effects. This ignores the deeper reality of Resonance between energy systems possessing similar qualities.

Dr. Karim's point is that all living beings are in Resonance -- energetic exchange -- with things in their environment to which they are linked vibrationally. Chaumery had personally designed and built a large number of these -G emitters, all of which were constantly pouring out vertical -G. Chaumery was thus in resonance with his creations, and this resonant link led to his poisoning and death by vertical -G.

This understanding of Resonance is central to Dr. Karim's BioGeometry system which we will introduce in a later section. In terms of understanding the death of Leon Chaumery, we can make a few initial statements regarding Resonance:

1. We are in resonance with everything we create, everything we focus our attention on, and everything we dowse. It is Resonance (which was addressed by the French researchers primarily through the term "The Law of Similars") that allows us to test the subtle vibrations coming from anything in creation.
2. Accordingly, we want to minimize our exposure to vertical -G, including strictly limiting the amount of time we expose ourselves to it through dowsing: this means

limiting our time testing phenomena which is full of Vertical Wave of -G such as toxic earth energy lines, electro-magnetic radiation, harmful states of human thought and emotion, disease emanations, and detrimental spiritual phenomena.

3. It is important to spend more time testing beneficial energies than detrimental, to keep our own subconscious resonance linked with strengthening vibrations.

DE BELIZAL'S STATEMENT ON THE TRUE NATURE OF NEGATIVE GREEN

After the death of his friend Leon Chaumery, the deeper significance of the Vertical (Electric) and Horizontal (Magnetic) waves was apparent to de Belizal by the time of his 1968 addition to later editions of *Essai de Radiesthésie Vibratoire*. In this later addition, he expressly characterized the existential nature of these two different components of the Negative Green Band.

Regarding the Magnetic wave, he stated that it was:

“ . . . [a] pure magnetic frequency which is a beneficial vibration par excellence. This is the vibration of GOOD, on the philosophical plane, which re-establishes deficient health to a good condition when rigorously dosed.”

Regarding the Electrical wave, he called it:

“ . . . [a] pure electric frequency, a noxious vibration, and on the philosophic plane the vibration of HARM. This is that which destroys the health and brings about death by unbalancing the vibration of the cell.” (p. 144 of the 4th edition)

De Belizal went on to note:

“By way of example: it is possible for me to kill an adult tree in one week by submitting the tree to the action of electric negative green. In the laboratory, Czech and Russian physicians actually kill flies, spiders, mosquitoes, etc. at will, by submitting them to the action of electric negative green...

Reproduced no more on the laboratory plane, but on the industrial plane, with a radar emitting a great intensity of an electrically pure negative green over a large field of action, it was possible to suppress all life by dehydration in an entire sector swept by this vibration of death.”

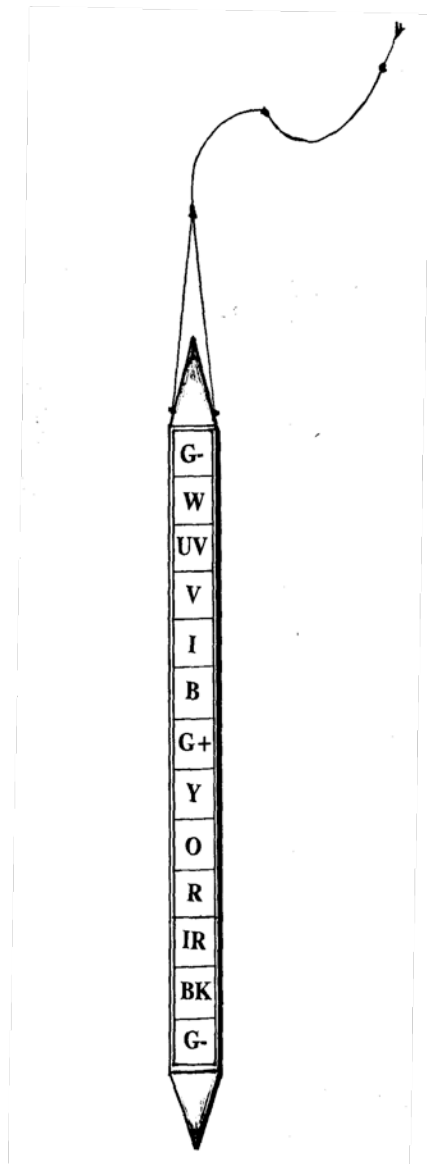

3. VIBRATIONAL SPECTRUM TESTING TOOLS

De Belizal and Chaumery created many different tools for testing the Vibrational Spectrum, including various types of Pendulums and energy measurement Rulers.

For this class, we will only survey below their two best-known Vibrational testing pendulums: the “Virtual Cone Pendulum” and the “Universal Pendulum.”

The safer and simpler of the two tools is the Virtual Cone Pendulum.

THE VIRTUAL CONE PENDULUM

The Virtual Cone Pendulum (hereafter VCP) was based on a Central Rod which has the 12 Band Spectrum laid out in a straight line.

This is similar to the original Turenne linear spectrum, but with Negative Green at the top and bottom instead of the “Infra-White” and “Infra-Black” of the Turenne spectrum.

From top to bottom the following abbreviations represented the 12 bands:

G-:	Negative Green
W:	White
UV:	Ultra-violet
V:	Violet
I:	Indigo
B:	Blue
G+:	Positive Green
Y:	Yellow
O:	Orange
R:	Red
IR:	Infra-red
Bk:	Black
G-:	Negative Green

Note that G- appears at both the top and bottom of the Rod; either of these positions could be used to test G-, as they are “octaves” of one another with the same energy quality.

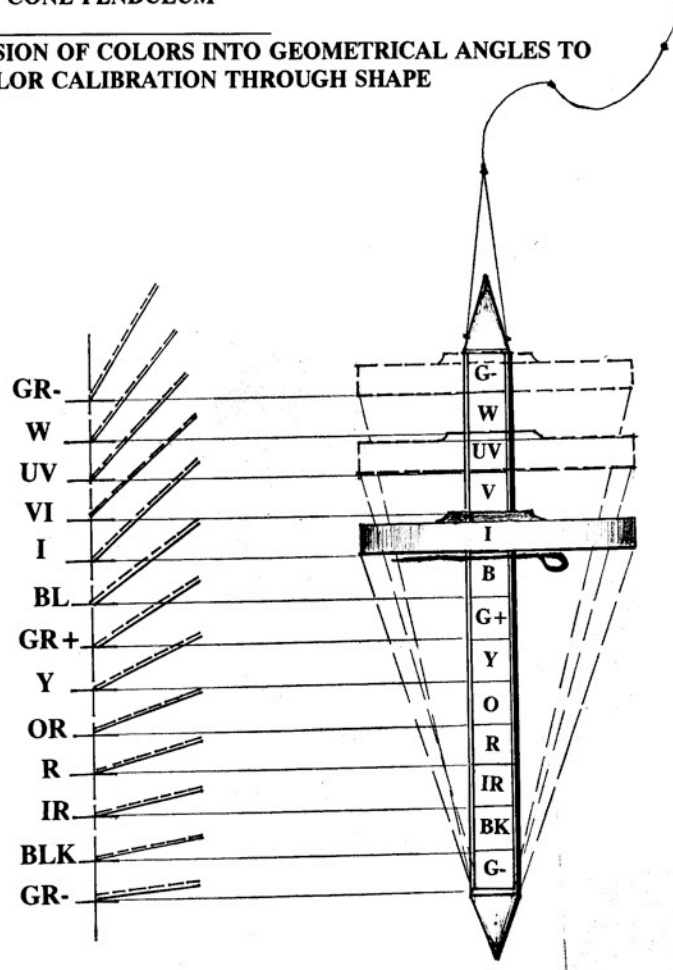

A circular disk with a central hole -- one side flat, the other side with a slight “lip” projection close to the central hole -- then fit onto the Rod by sliding it into the central hole in the disk.

By placing the Disk on the Rod so that the disk is right over the initials of a particular energy quality, you are then testing for that energy quality. This creates an angle (like refraction of white light in a Prism) between the bottom tip of the Rod and the lower edge of the Disk, which resonates with a specific energy quality. This principle, as you can see, is directly related to the Turenne angles of the Bands described earlier. However Chaumery and de Belizal were able with this tool to be able to test the entire full spectrum of all bands with just one unified tool.

This was accomplished by moving the Disk to variable heights which corresponded to the angles of specific Bands, as seen below. The edge of the disk then created a different implied (“virtual” or in French “fictiv”) angle to the bottom tip of the rod, creating a “Virtual Cone”; hence the name of this tool. The angle of this Virtual Cone changes from shallow to steep as the disk is raised to higher positions on the rod.

VIRTUAL CONE PENDULUM

CONVERSION OF COLORS INTO GEOMETRICAL ANGLES TO
GIVE COLOR CALIBRATION THROUGH SHAPE

In their original texts, Chaumery and de Belizal gave no direct information regarding the use of the Virtual Cone Pendulum for distinguishing between Electric (Vertical) and Magnetic (Horizontal) waves. Chaumery himself -- the chief developer of the tool -- simply noted to always place the disk on the rod so that the side with the lip was facing up.

Although not mentioned in their texts, the lip can also be placed downward when the disk is over the correct setting on the rod; this has the effect of raising the disk higher on the rod, changing the angle of the resultant virtual cone slightly.

Dr. Ibrahim Karim made public for the first time the hidden principle of the Virtual Cone Pendulum, based on his personal research into the design of the tool. When the lip on the disk is up and the disk is over a particular Band setting on the rod, the Horizontal wave of that Band is detected. When the lip on the disk is down, the Vertical wave of that energy is detected.

Herein lies the reason why Chaumery did not clarify this principle of VCP use: he did not want people getting into trouble using the this tool to detect the detrimental Vertical Wave energies. Given his fate, we can understand his concern.

The Virtual Cone Pendulum is a relatively safe tool to detect any of the Bands, because it is built as a detector and not as an emitter of energy; if one tests Vertical Waves in any Band with it, then one does pick up that energy in one's field through Resonance. However the Pendulum is not designed to amplify the Vibrations it detects.

The other Pendulum designed by Chaumery and de Belizal however, was designed to both detect and emit the vibrations it was set to. This means that it is much more dangerous to use by those not well trained in Vibrational Radiesthesia.

THE UNIVERSAL PENDULUM

The Universal Pendulum can be used to detect and measure the 12 Bands in either their beneficial or detrimental Waves; it can also emanate them, and so should be approached with caution because it has the capacity to emanate toxic energies. The Universal Pendulum was based on the form of a sphere, and contained stacked hemispheres inside to amplify energy emissions.

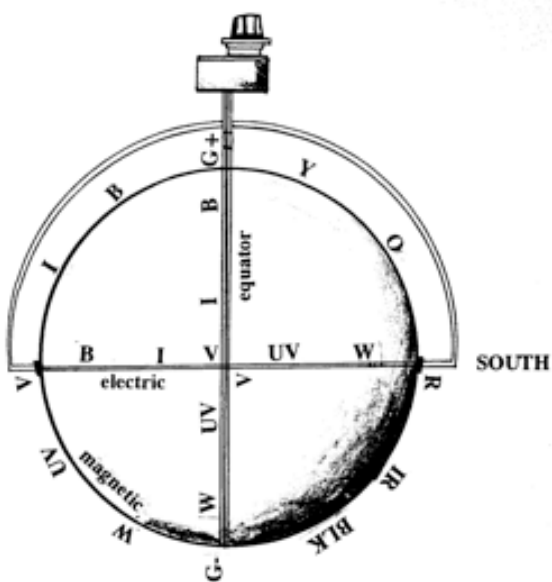

The Universal Pendulum (hereafter abbreviated UP) was invented by Chaumery and de Belizal around 1936.

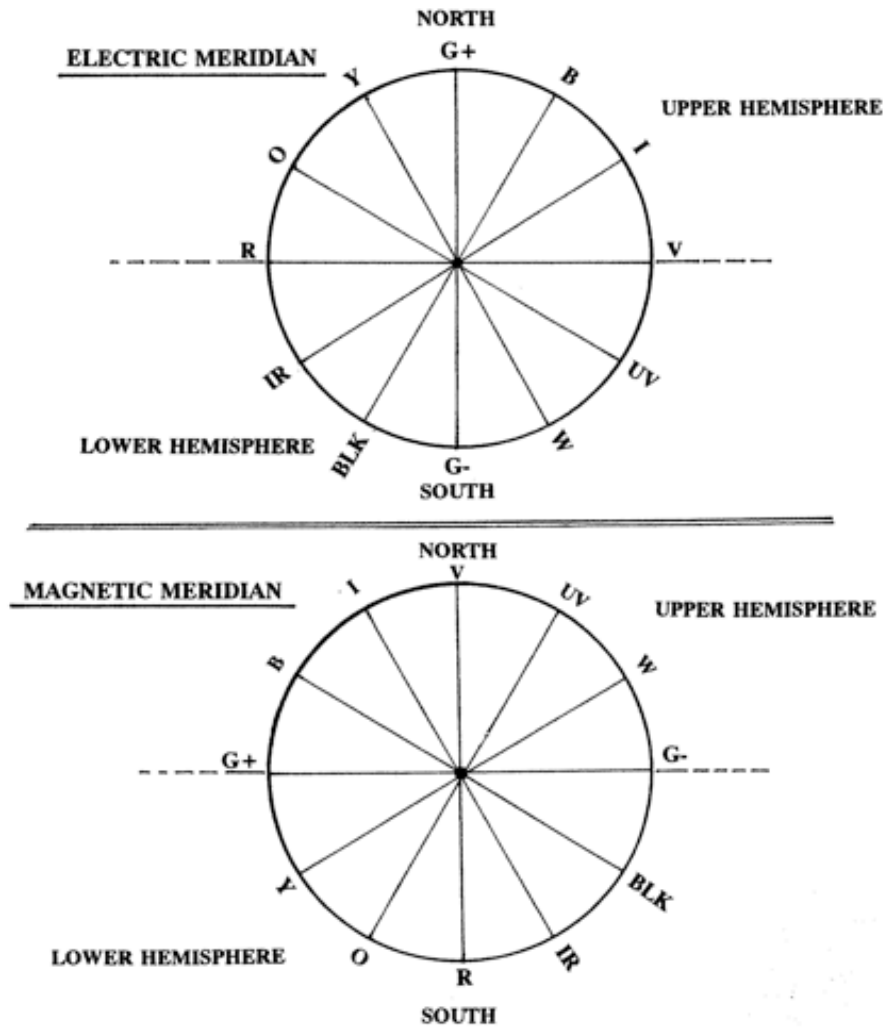

The first version was a sphere weighing 125 grams and measuring 60mm in diameter. The energetics of the Universal Pendulum are a more complex version of the principles we have detailed thus far in this training.

We will only describe here the basic design of the Pendulum without going into the deeper aspects of the energetics of this tool, which we will not be using in our work in this training due to its dangers if misused. However we want to give a basic understanding of its design, as there are still people who sell it and who use it (although unfortunately often without sufficient understanding of Vibrational Radiesthesia to do so safely.)

The Universal Pendulum was designed with a non-ferrous metal handle connecting the North and South poles of the Sphere; it can be rotated over any longitudinal line on the sphere. The cord suspending the pendulum connects to this metal handle, and can slide to any position on the handle (ie, over any latitude position) between the North to the South Pole. The combination of the full 360-degree movement of the handle with

s two gre
ct as ene
outh pole
' Meridic

We will not be using this Pendulum in this training, and again we recommend caution in using this device. We have found that some modern sellers and users of this tool have only limited understanding of its Vibrational powers, and in some cases use the Pendulum in harmful ways (such as moving the pendulum over a person, going one at a time through each of the Electric Bands to emanate them into a person's energy field.)

We will be using a much safer and easier device for our testing in this training: the Vertical and Horizontal Wave Pendulum set created by Dr. Ibrahim Karim.

4. VIBRATIONAL TESTING OF THE NATURAL WORLD

With the Vibrational Spectrum now completed and effective detection tools created for each of the Bands, de Belizal and his collaborators tested different systems in the natural world regarding which invisible Vibrations they emanated.

Leon Chaumery developed the Chaumery Ruler, which used Turenne's principle of the 8 meter wave to be able to test any person on every one of the Vibrational Spectrum bands, to determine if on each band their energy field went up to the 8 meter wave (health) or did not reach that far (weak or illness state.)

Chaumery and de Belizal also found that there was one particular Vibrational Band which tested the strongest for any individual, and that this varied from person to person. They speculated that this was due to the time of their birth (celestial influences) and so this strongest Band in a person's energy field became known as their "Astral Color." They would often do testing on a person through using a pendulum tuned to that person's Astral Color, rather than using Personal Wavelength on a Neutral Pendulum.

On the next few pages are representative samples of testing natural phenomena, translated from the French texts by de Belizal. They are very interesting, however you will notice that they unfortunately are missing one important point; they do not specify if the Waves in the Band they detected were Electric (Vertical) or Magnetic (Horizontal). This may be for the same reason as they did not clarify on the Virtual Cone Pendulum how to test for harmful Electric waves, but it is an unfortunate gap in their testing data.

Many of the detrimental vibrations described in the testing below were no doubt primarily Electric / Vertical Waves in that Band, and the beneficial vibrations were primarily Magnetic / Horizontal Waves. Be aware that -- as you will find yourself later in this training when we get into practical techniques -- that toxic phenomena can often have both Vertical and Horizontal Waves together being emanated from it, whereas beneficial phenomena is primarily Horizontal Waves (with sometimes very weak amounts of Vertical Waves accompanying it, or no Vertical Waves at all.)

We provide these charts here as an example of historical testing done using the Vibrational Spectrum. We will provide a more detailed mapping of the qualities associated with each of the Bands later in this training.

VIBRATIONAL RAYS SHOWING WATER QUALITY (FROM DE BELIZAL'S *Microvibrational Physics*)

Normal: Potable, pure water = Blue

Potable, mineral water = Indigo

Potable, charged with noxious waves = Infra-red

Brackish, bitter, salty (seawater mixed with sweet water) = Black
 Animal particulates (boiled) = Ultraviolet
 Nonpotable, decomposing vegetable Particles = Violet
 Nonpotable, too much ozone = White
 Nonpotable, tainted, carcinogenic = Positive Green
 Nonpotable, radio-active = Negative Green
 Nonpotable, constituents = Yellow
 Dangerous, chemicals = Orange
 Dangerous, bacteria = Red

ANALYSIS OF BORDEAUX WINE QUALITY

White: natural wine modified by cuts with other wines from outside the area.

Positive Green: Wine from the midi

Ultra-violet: Algerian wine

Blue: natural ordinary wine, vin du table

Indigo: natural pasteurized wine

Orange: with chemical products

Infra-red: carrying products other than chemicals

Red: wine not suitable for drinking

Yellow: bad wine

Violet: affected by the season or lunar phase; good

nevertheless

Black: tannin

ANALYSIS OF MUSHROOMS

(FROM DE BELIZAL)

Edible Blue: Indigo (Indigo = very good!)

Uncertain, indigestible Yellow: Positive Green (G+ = aggravation)

Venomous, dangerous Orange: Red (Red = reject)

On the next page we provide one section, in the original French, from de Belizal's second book. This shows his testing of the natural Vibrational Band (innate Vibrational Quality) expressed by each Acupuncture Point along the Energy Meridians in the human body, as described by Chinese Medicine.

In our first class in this series, *The Personal Wavelength*, we explored testing each Acupuncture Point for being in or out of balance; now when you learn the practical methods of testing the Vibrational Spectrum in this class, each of these Points can be tested for its own innate Vibrational Quality. Do you find that de Belizal was correct?

For those not familiar with French, the abbreviation letters of the Colors are either the same as for English (R for Red, IR for Infra-Red, Bu for Blue, etc.) or are as follows:
V+ is Positive Green, V- is Negative Green.
J is Yellow.
N is Black, and Bc is White.

Estomac is the Stomach Meridian; Rate-Pancreas is the Spleen Meridian.
Coeur is the Heart Meridian; Intestin-grele is the Small Intestine Meridian
Vessie is the Bladder Meridian.

5. ANCIENT CIVILIZATIONS AND THE LOST SCIENCE OF INVISIBLE WAVES

Chaumery and de Belizal, as had Turenne before them, used the term “The Law of Similars” to explain the fundamental principle of Resonance between things with similar energy qualities.

A major focus of research for the French Radiesthesiasts was the vibrational emanations from Shapes, referred to as “Waves of Form” or “Shape-caused Waves” (ondes de forme,) Similar shapes are connected with each other by resonant exchange of energy between these waves, i.e. via the Law of Similars.

We have seen how Turenne identified the angles correlating to the different bands of the Vibrational Spectrum, which were then used by Chaumery and de Belizal to create the Virtual Cone Pendulum; the angles made the Pendulum capable of testing every Band in the Spectrum.

Chaumery and de Belizal created many of their own forms to generate specific energy qualities. For example, the following illustration is from de Belizal’s first book with translated text:

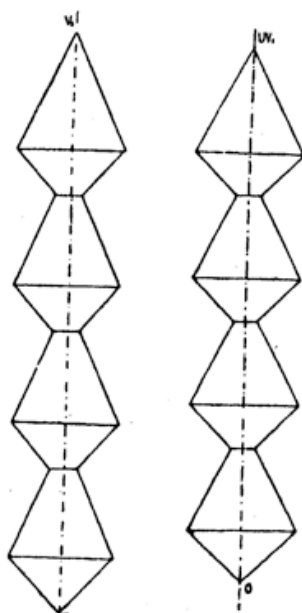

Figure 43. Example of two batteries with rays giving red or orange

Figure 44. Use of checkerwork grid to neutralize rays of a battery.

The shapes of these “batteries” had specific angles built into them: the one on the left had the angle at the bottom of the Shape to give an emanation of the Red vibrational

band, and at the top for the Violet vibrational band. The battery on the right had an angle at the bottom of the shape which emanates the Orange vibrational band, and at the top the Ultraviolet vibrational band.

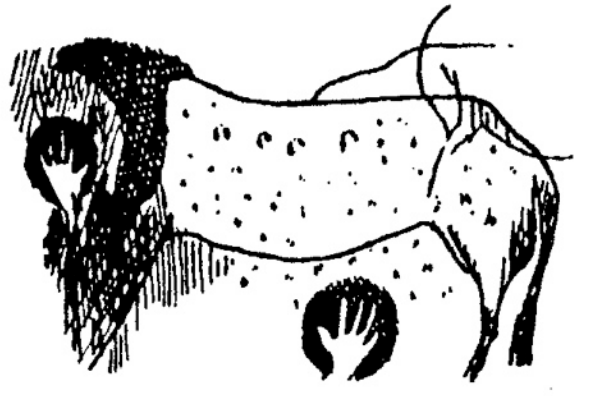

The figure to the right side of these shows the batteries covered with a squared grid pattern. As we saw in the “Witness Protection Program” information in the first class in this series (*The Personal Wavelength*), this type of grid pattern acts as a kind of Faraday Cage for Radiesthesia energies. The vibrational band emanations are neutralized in the grid-covered battery.

Now that de Belizal and Chaumery had completed Vibrational Spectrum, and developed effective tools for testing each band in the Spectrum, they were able to start testing artifacts from different cultures to understand their vibrational powers. This developed into a fascinating body of research, showing the existence of a hidden vibrational science tradition going back to the earliest periods of recorded human history. Classical traditions all over the world were found to have developed their own secret knowledge and applications, made manifest in the precise vibrations emanated from their artifacts.

RADIESTHESIA OF THE CAVEMAN

De Belizal’s first text *Essai de Radiesthésie Vibratoire* explored the use of vibrational linkages in different cultures of the ancient world, beginning with the information left to us in ancient cave drawings. Referring to researcher Norbert Casteret and his discoveries of caveman images in the caverns of the Pyrenees, Chaumery and de Belizal pointed to significant indications in these drawings that they were primarily intended to create vibrational linkages between these early humans and the animals they hunted.

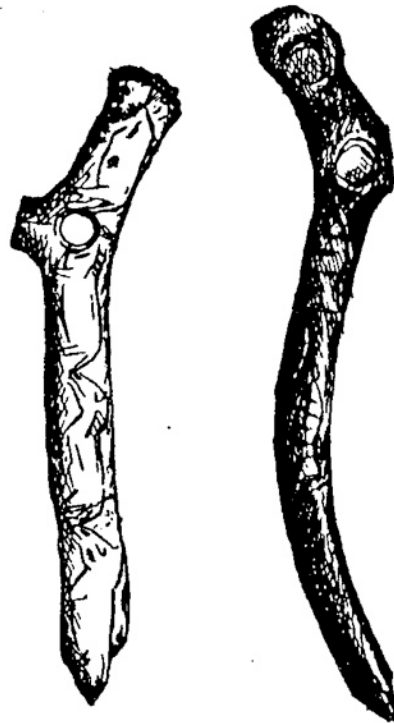

A cave image of a hand on the flank of an animal was intended to impose the will and power of the caveman on the prey; images of wild animals on these cave walls are riddled with spear and arrow impacts on the animals’ vital areas. Through the vibrational practices with these images, the animals were weakened to become easier prey to the hunters. Although this idea seems an absurd superstition to the modern Western mind, the objective findings of the French Radiesthesists indicate that this phenomenon, in many different guises, is quite real.

Chaumery and de Belizal pointed to ancient artifacts of the cave-dwellers as evidence

of their knowledge and use of an early form of Radiesthesia. Numerous short staffs made of wood or reindeer bone have been found which have large circular holes at the top of the staffs.

Some of these items, which Chaumery and de Belizal termed “Wands of Commandment”, also have the images of animals inscribed on them. Chaumery and de Belizal believed that a stick was passed through the hole in the Wand so that the stick could be held horizontally in one hand while the other hand was used as an antenna. When the vibration of an animal was detected this would cause the Wand to move due to the vibrational linkage, indicating the direction to go in order to find the desired animal.

RADIESTHESIA IN ANCIENT EGYPT

Chaumery and de Belizal found that the Ancient Egyptian civilization had the highest development of Radiesthesia knowledge of any ancient culture. Accordingly, much of their research was connected to Egyptian artifacts, of few of which we will reference here.

THE “EGYPTIAN PENDULUM”

Chaumery and de Belizal researched an ancient Egyptian pendulum design which can be seen in many museums; technically this is known in Egypt as the “Wadj”, but was popularized by Chaumery and de Belizal simply as the “Egyptian Pendulum.” At the top of the pendulum is a hemispherical cap, which creates an emission of Negative Green measurable out of its base. If there are no other marks on the Wadj Pendulum, then the pendulum emits both Vertical and Horizontal Waves of -G. However on many models -- including the historical Wadj shown to the left, and the illustration of the Wadj shown on the cover of de Belizal’s second book -- there are markings of a double zigzag pattern which has the effect of canceling the harmful Vertical Wave of -G.

The double zigzag pattern looks similar to the Aquarius sign of modern Western Astrology. An Initiate in Ancient Egypt would have recognized that pattern as part of their Hieroglyphic language: it is similar to the Hieroglyph for the letter “N”, with the shape of the Hieroglyph representing the Primordial Waters of Creation.

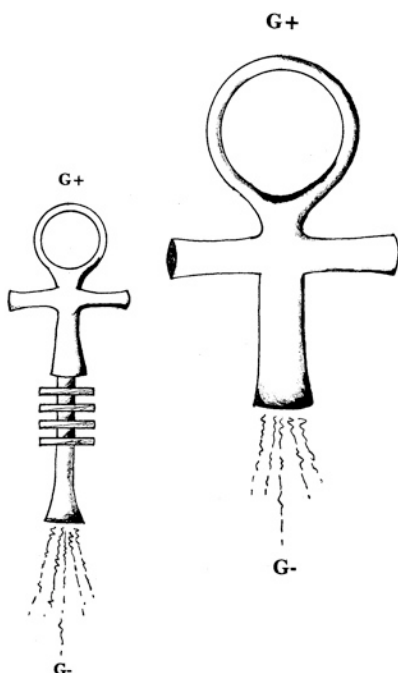

The Negative Green carrier wave emission from the base of the Pendulum makes it a very sensitive detector of energy. Since large numbers of this type of Wadj pendulum have been found in archeological digs in Egypt, this indicates that the ancient Egyptians practiced Radiesthesia with the use of specialized pendulums, just as in the Vibrational Radiesthesia of modern times.

THE ANKH

The symbols used in the Ancient Egyptian tradition proved to be Radiesthesia tools or specialized emitters in their own right. The well-known Ankh -- generally thought of only symbolically as representation of Life -- proved to have the shape which creates Positive Green at the top, and Negative Green at the bottom.

The person holding the Ankh can direct it to another person so that they receive either the Positive Green or Negative Green energy, depending on which end of the Ankh is directed towards them.

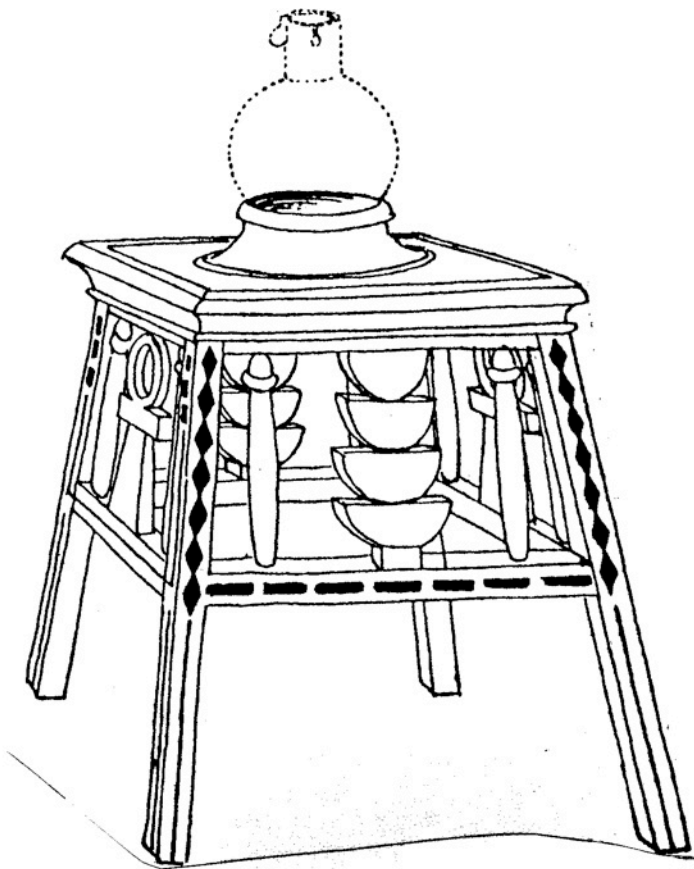

In the drawing to the left (adapted from an original in *Essai de Radiesthésie Vibratoire*) there are two ankhs shown. The right Ankh shows the G+ and G- emanations from the two opposite ends of the Ankh, and the left Ankh is shown with its energetic emission being increased or modified by being put another classical Egyptian shape, the Djed pillar, which was simply described in the book as being a “battery”.

THE EGYPTIAN ENERGY CHARGING TABLE

The Napoleonic expedition to Egypt had brought back many artifacts, including the table below found in the Louvre museum. Chaumery and de Belizal found that the form at the top of the table was formed so that a flask could be placed there. Liquid in the flask could then receive the composite vibrational wave from all the shapes built into the design of the table, which interestingly featured the top of the Ankh (+G) and the bases of four stacked flat hemispheres in an end-fire array (-G).

They found that the composite wave received by the liquid in the flask was in the Blue band; interestingly they also found that the “radiesthetic battery” created by the five stones levels above King’s Chamber in the Great pyramid also intensified the Blue Wave, as did the design of the “Molten Sea” in the Hebrew tradition (where the 12 cattle in four groups of three animals each created a Blue vibration wave.)

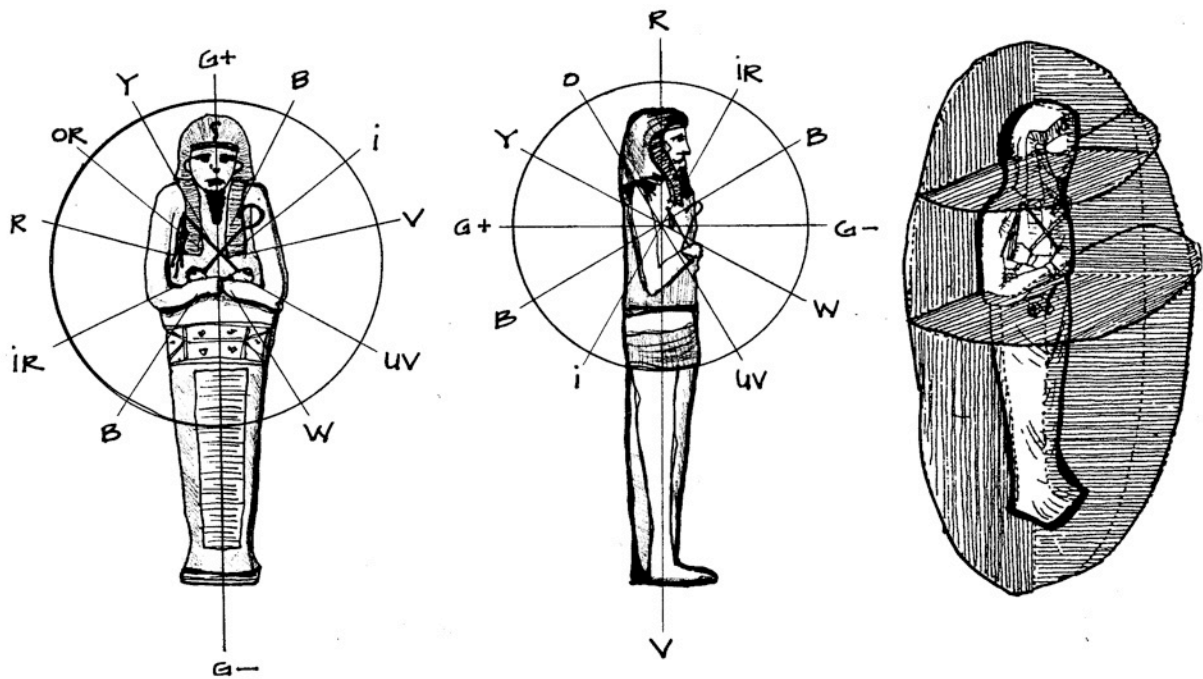

THE RADIATIONS FROM THE EGYPTIAN SARCOPHAGUS

Chaumery and de Belizal discovered that the form of the Egyptian sarcophagus, inside which a mummy was placed, was created to send a toxic wave of Vertical -G from the front of the Sarcophagus. This can be seen in the illustration below, adapted from an original by de Belizal, in which each axis of the sarcophagus has its own spread of the Vibrational Spectrum; the side view reveals that the projection from the front is V-G.

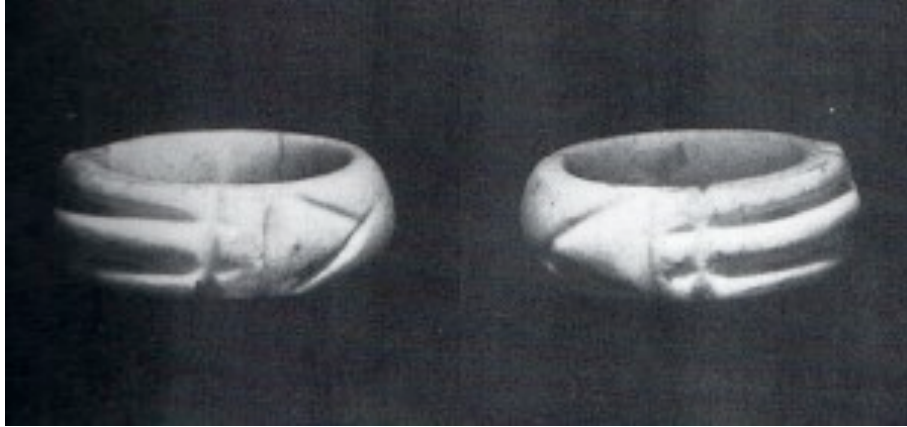

This was one method of protecting the body of the deceased, and their tomb, from grave robbers. Violating a tomb or a dead body was considered a terrible offense in Ancient Egypt; the ancient Egyptians would be horrified to see how we have broken into their tombs and put mummies on public display today.

The protection of Tombs by V-G concentrations then gave rise to counter-measures in Egypt, whereby other Radiesthesia forms would be used for protection against these toxic radiations.

THE WAVE FORM OF LUXOR

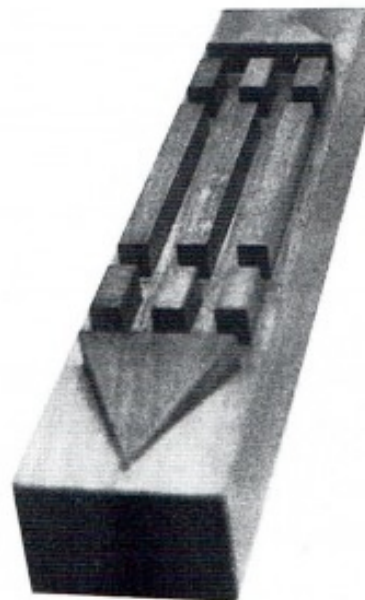

The “Wave Form of Luxor” was one form which could apparently defend a person from the V-G concentrations which were used to protect the Ancient Egyptian tombs.

De Belizal analyzed the shapes on a clay ring which was discovered by a French Egyptologist around 1960 in the Valley of the Kings; as fate would have it, that Egyptologist (Marquis d'Agrain) was the grandfather of de Belizal's wife. De Belizal asserted that wearing this ring was the secret of how the Egyptologist Howard Carter survived the opening of the Tomb of Tutankhamon, which had an inscription at the entrance stating that harm would befall anyone who violated the tomb. Soon after opening the tomb, Carter's partner Lord Carnavon died from a strange malady, followed by the deaths of around 18 other members of the team within 2 years of the opening. De Belizal named the shapes on the Ring the “Wave Form of Luxor” and the ring itself became popularly known as the Atlantis Ring.

After vibrational analysis of the ring, de Belizal created a straight bar version of the shapes on the ring, which he termed the “Harmonizer of Luxor.” Like other energy tools created by French researchers, it needed to be oriented North-South to align with the earth's natural Magnetic Field flow (which creates the Positive Green - Negative Green Axis and manifests the entire spectrum around them.)

De Belizal believed the form would harmonize the Telluric Energies which arise from below us in the Earth, with the Cosmic Energies which descend on us from above; in his writings he described the principle that these two opposite polarity energies which we are

suspended between must always be balanced, with serious consequences if they are not.

THE BALANCE OF COSMIC AND EARTH ENERGIES

The effect of the Wave Form of Luxor to harmonize the ascending Telluric Earth energies with the descending Cosmic energies, brings us to the subject of how Chaumery and de Belizal understood these important background radiations.

Chaumery and de Belizal considered detrimental energies coming from the Earth (which they termed “noxious waves” or “noxious vibrations”) to be part of a greater context of earthly and cosmic forces. In a report given to the 1954 International Congress of Radiesthesia in Paris, de Belizal specified that their research indicated an essential balance between two forces: The “Telluric Force” rising from the center of the Earth and the “Cosmic Force” which comes from the solar system, the galaxy, and the entire surrounding cosmos. For any human, animal, or plant cell to grow and develop normally, it must vibrate in harmony and balance with the telluric and cosmic forces.

Chaumery and de Belizal differentiated detrimental vibratory waves into two components: the first is the -G carrier wave, which acts similarly to a Hertzian wave which can carry a secondary wave upon itself. The second component is whichever wave is carried on that carrier wave. They noted that in principle this is similar to the transmission of radiowaves (which is where the research of Turenne began), but in this case was actually (in their words) “an illness wave”.

Chaumery and de Belizal asserted that whenever a location is poisoned by noxious waves coming from the Earth (such as those detected in the Von Pohl study in Germany which started the modern rediscovery of Geopathic Gridlines), that this demonstrates the telluric force manifesting without the necessary counter-balance of cosmic forces. Under normal circumstances, cosmic forces balance and hold the detrimental telluric forces. Acting alone, their effect is unchecked.

Telluric force in this instance provides the Vertical Negative Green carrier wave to transport a wave of illness, which (carried as information on the telluric force like a radio program on a Hertzian wave) may emanate from any number of toxic sources such as polluted water, a sewer, microbes, a graveyard, a dry radioactive fault, etc. The juxtaposition of different layers of minerals in a fault in the Earth can act as a battery, similar to the battery of hemispheres emitting Negative Green used by Chaumery. (NOTE: this is also similar to Wilhelm Reich’s concept of an “orgone accumulator” based on multiple layers of different substances.)

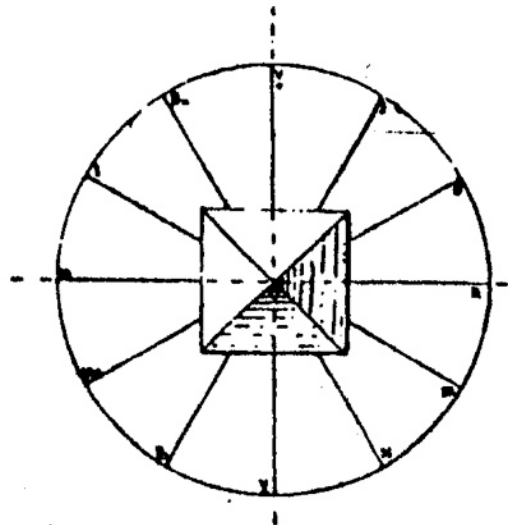

Chaumery and de Belizal found that the noxious energy could only be carried into an area as radiation when something had happened to remove the cosmic force from the local energetic equation, leaving the Telluric force to dominate; they termed this the

“rupture of the compensating forces”. Chaumery and de Belizal asserted that many common physical and mental ailments originate in the noxious emissions from the Earth. They noted that in China, a culture with much ancient spiritual wisdom, the construction of a new building ensues only after a consultation with experts to ensure that a project is not sited where these toxic energies, or “Dragon Lines”, persist. Chaumery found several approaches to shielding homes from these energies, involving man-made radiesthesia form solutions (Vibrational Tools based on the shape-caused waves he had discovered) as well as solutions based on natural materials. One of the latter which he explored was the packing of natural Kaolin clay 20 cm deep in the basement of a home to absorb and contain the detrimental radiation rising from the Earth.

THE LARGE-SCALE RADIATIONS FROM THE PYRAMIDS

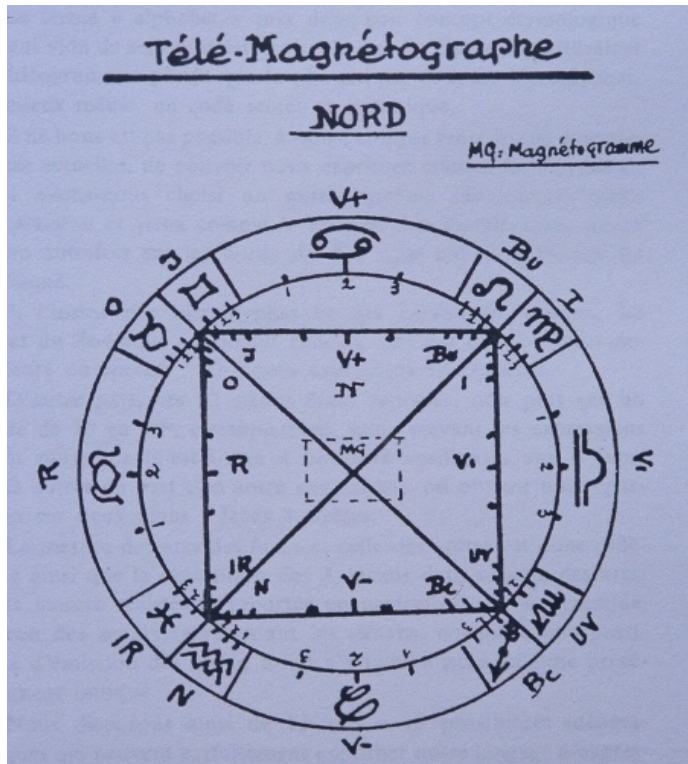

De Belizal stated in his first book with Chaumery, that they believed the Pyramids in Egypt were large beacons. The Horizontal Waves emitted in specific directions by the Pyramid could be used for navigation by sailors and desert travellers, as the huge mass of the pyramids sent the Waves from it long distances.

They also noted that the 3 Major pyramids at Giza Plateau each gave off a different Vibration -- Orange, Infra-Red, or Black -- which could be used by a Radiesthesiasts to tune into the emanations of any one of the pendulums, or to triangulate a position from their relative emissions.

De Belizal took this idea further in his later research, to prove that not only could the Ancient Egyptians use Radiesthesia for navigation, they could use it to send information long distances instantly, similar to a telegraph machine.

He was inspired by the work of Abbe Mermet (introduced in the last class in this series) who was highly proficient in testing energies from maps, which was known as teleradiesthesia.

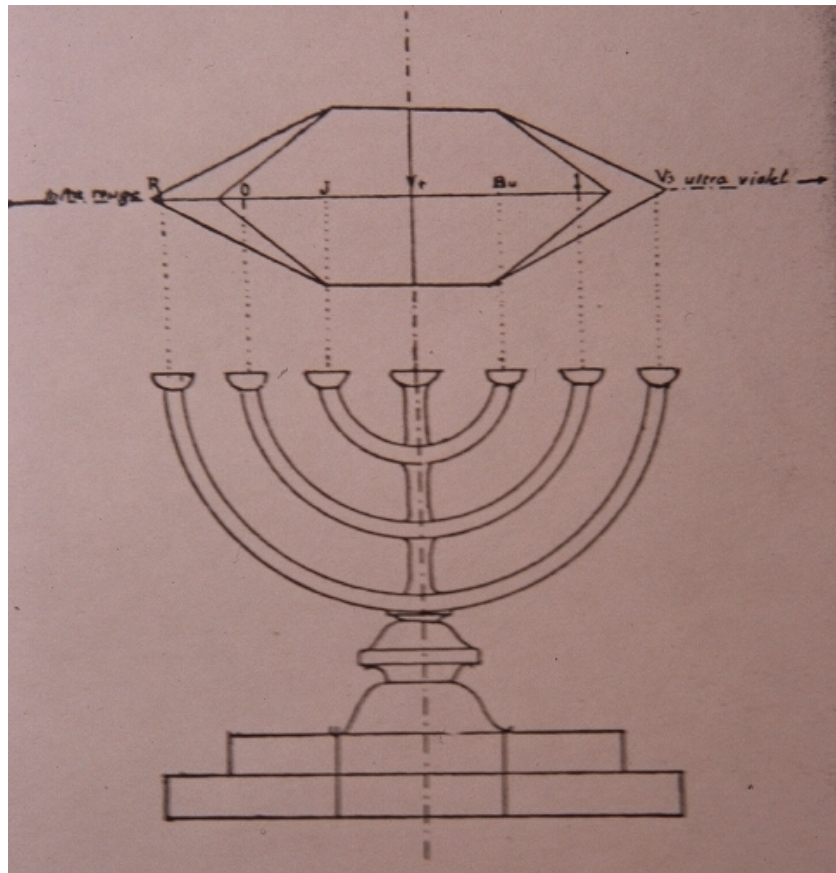

De Belizal developed the “TeleMagnetographe”, a pattern which combined a two-dimensional top-down view of a pyramid in the center with other shapes, and their connections to the 12 vibrational bands.

This pattern was given to other Radiesthesia researchers in different cities, who tested the energy appearing in the center of the pattern at a particular predetermined time.

At that time de Belizal would put a specific vibration into the center of his pattern, and through the Law of Similars the other Radiesthesiasts accurately detected that same vibration appearing at that moment on their copy of the pattern.

This proved to de Belizal that indeed the ancient Egyptian adepts were capable of sending information instantly over large distances, thousands of years before the development of the modern telegraph.

RADIESTHESIA IN THE JEWISH KABBALISTIC TRADITION

De Belizal found that the Jewish Menorah, in its original 7-branched form, created invisible emissions of the 7 colors of the visible light spectrum; From Red on one end to Violet on the other end, with Green in the central location.

When candles lit in the 7 branches, an intense radiation of these bands is created; the fire and heat generated by the candle flames increases their power further.

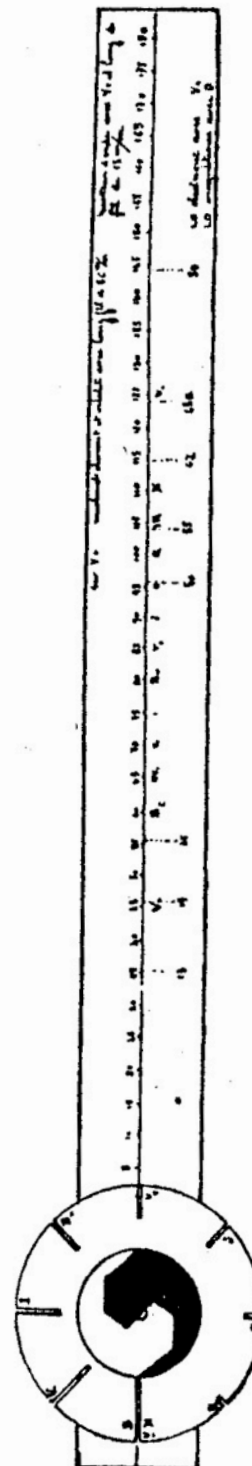

Infra-Red is generated off the Red end of the Menorah, and Ultra-Violet off the Violet end.

The base shape has two different proportions with two unequal axes. The energetic effect of the base is that it creates a greater spread of the vibrations generated by the branches and candles in the Menorah.

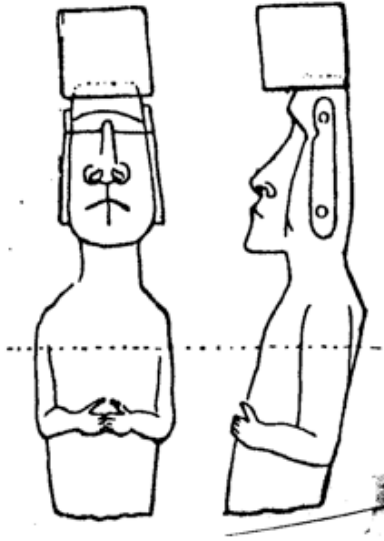

RADIESTHESIA IN ANCIENT CHINA

Chaumery and de Belizal believed that the Chinese were practicing scientific radiesthesia 5000 years ago through the use of the Ba-Gua geometric pattern. That pattern -- popularized in the West in recent years through the growing popularity of Feng Shui -- is an octagon, or symmetrical eight-sided shape, which has the one or the eight fundamental trigrams (composed of three lines, each of the which is solid or broken in the middle) of the I Ching located at each of the eight sides. In the center of the design is the Yin-Yang symbol of flowing dark and light areas within a circle.

Chaumery and de Belizal found the Ba-Gua to be an extremely precise emitter and receiver of the full range of universal vibrations. They found it could be used to detect both the vibration of the illness of a person and the vibration needed to remedy the illness, by placing a witness of the patient in the center of the Ba-Gua. The design could be used for multiple purposes, including detection of the toxic radiations from the soil and Earth Energy lines which the Chinese called the "Veins of the Dragon".

RADIESTHESIA OF EASTER ISLAND

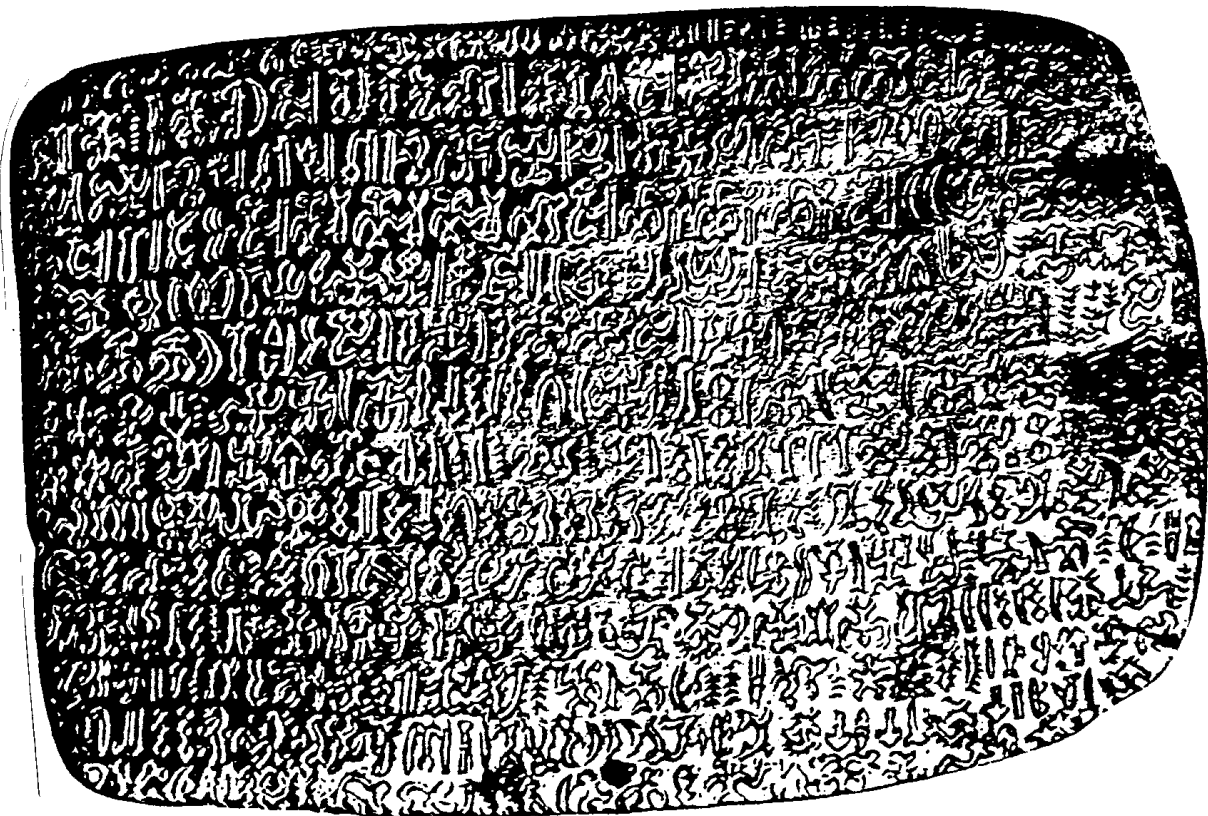

Chaumery and de Belizal tested models of the Easter Island statues, and found that they had been designed to broadcast the Vertical Wave of -G from their front. The toxicity of the wave only decreased if the entire head was removed from the statue, but was still present.

They determined that the statues were used to send waves of Vertical -G out from the island to repel attackers; the radiation went out as far as 10 miles from the shoreline. However the powerful zones of toxic Vertical -G would have also affected the interior of the island.

They then found an illustration of a stone tablet from Easter Island, covered with strange figures; these are interpreted today to be a forgotten language, however

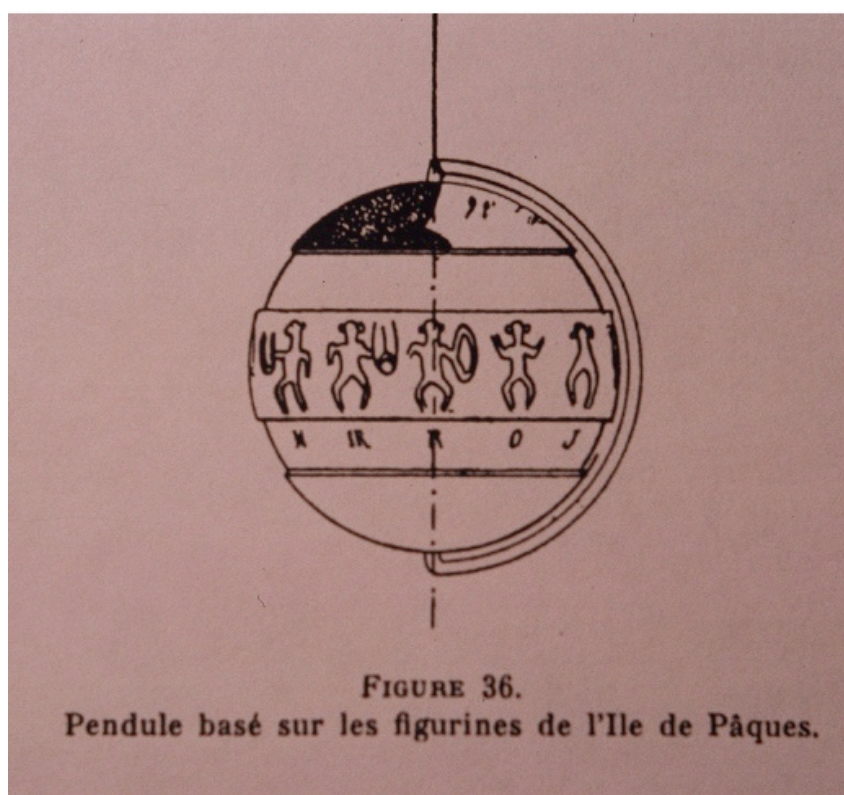

Chaumery and de Belizal tested them and found that they radiated Radiesthesia Waves.

The stone tablets are known as Keiti, and the one that caught their attention was one which was given to a vicar by the inhabitants. There were strands of a woman's hair caught on the Keiti, indicating that the local women wore these in their hair.

Chaumery and de Belizal found that these protective tablets were a way for the locals to protect themselves from the destructive effects of the V-G created by the statues. They found that attaching a picture of this tablet to the ceiling of a location helped for a short time to clear toxic Earth Energies in the location (they attributed the decline of the effect from the picture to it not being large enough, however it is likely to have happened due to the saturation of the picture with the V-G wave. This type of saturation is rapid in a flat paper picture, whereas the original engraved stone tablet would not saturate quickly.)

They found that the different pictograms on the tablet corresponded to particular Vibrational Bands. They created a research pendulum, which could detect (through the "Law of Similars") each Vibrational Band by means of the pictogram which generated that Band.

It is important to note that the history of Easter Island in the time after the construction of the Stone Heads is a terrible one: ecological collapse, widespread death and cannibalism. The story of Easter Island is a cautionary tale for anyone who may be tempted to misuse the power of nature's invisible waves.

Those who live by the sword, die by the sword; those who seek to use Vertical -G as a weapon against others, will themselves be destroyed by this power.

6. SUMMARY OF THE DISCOVERIES OF DE BELIZAL

For the purposes of this training, the key concepts for you to remember from this survey of de Belizal's discoveries are the following:

1. **The Vibrational Spectrum was completed, with the addition of “Negative Green” creating the 12-Band Spectrum.** This created a final system of the following Bands: Black, Infra-Red, Red, Orange, Yellow, Green, Blue, Indigo, Violet, Ultra-Violet, White, Negative Green. The Circular Spectrum of de Belizal places Negative Green between Black and White.
2. De Belizal used the term “Electric Wave” to describe the detrimental component of each Band, and the term “Magnetic Wave” to describe the beneficial component; these designations were based on whether the waves could pass through certain types of insulators, and does not mean that these are literally Electric or Magnetic Waves. Although there are technical differences between the concepts of de Belizal and of Turenne regarding the typology of Waves, **for our purposes in this training we will treat Vertical and Electric waves as being functionally interchangeable concepts, as we will for Horizontal and Magnetic Waves.**
3. **Negative Green is an invisible energy quality, which is the most penetrating of all Vibrational Bands.** De Belizal felt that the beneficial (Horizontal / Magnetic) wave of -G was the archetypal quality of Life, and the detrimental (Vertical / Electric) wave of -G was the archetypal quality of Death.
4. **Each Band of the Spectrum was not simply a visible color; they emanated from all phenomena, usually as invisible radiations** with the same qualities as the color. Of particular interest were the “Shape-Caused Waves” which were emitted by different Shapes and Angles. These were found to have been employed throughout the ancient world in advanced forms of Radiesthesia.
5. De Belizal and his collaborators, as had Turenne, used conceptual models based on Wavelength (as is the case in mainstream Physics today) to describe the functions of the Bands in the Vibrational Spectrum. However more recent work by Dr. Ibrahim Karim, founder of BioGeometry, has demonstrated that the true functions of the Bands can only be understood by their energy qualities and the resonance these qualities have with various phenomena which are of the same quality; **the wavelength model is insufficient, and has been replaced in recent times with Dr. Karim’s “Physics of Quality.”**

D. DISCOVERIES OF ENEL: SPIRITUAL ASPECTS OF THE VIBRATIONAL SPECTRUM

“Enel” was the pen name of an ex-Russian Army Colonel named Scariatin, who moved to Egypt and was part of a Russian immigrant community there. Enel wrote many studies of Ancient Egypt and how its mysteries were related to the Jewish Kabbalah, from the 1920’s through the 1940’s.

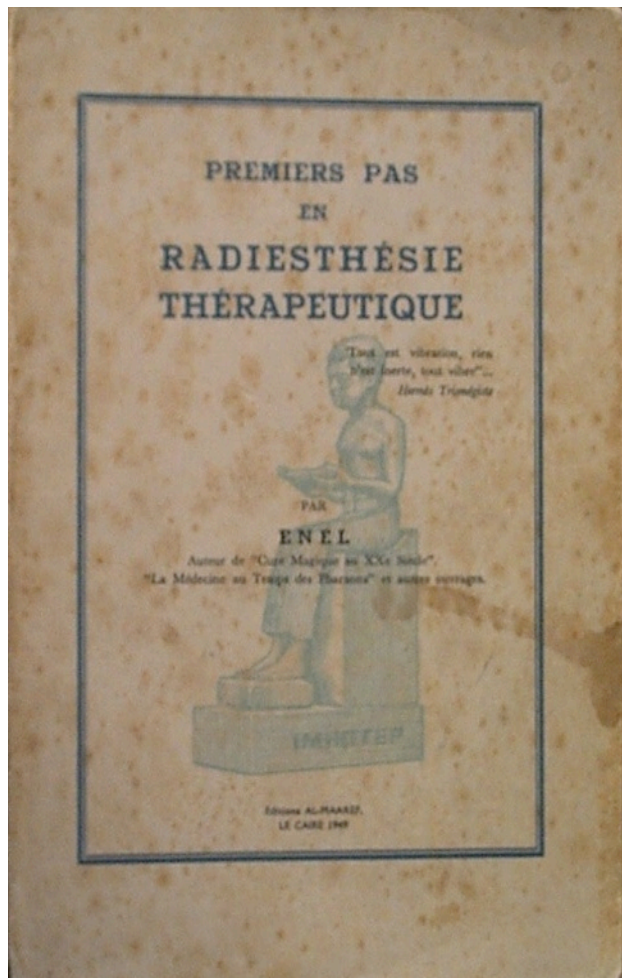

Enel had used French Radiesthesia for many years before he discussed it for the first time in his 1949 book *Premiers Pas En Radiesthésie Thérapeutique*, (First Steps in Therapeutic Radiesthesia). In this text he includes in the Bibliography both Turenne’s 1931 book on *Light and Color* as well as Chaumery and de Belizal’s *Treatise on Experiments in Physical Radiesthesia*. However his work follows much more closely behind Chaumery and de Belizal -- including his use of their instruments for Radiesthesia testing -- than it does Turenne.

He then wrote two further texts about his Radiesthesia experimentation, *Radiations from Shapes and Cancer* and *Treatment at a Distance by Radiation*.

Enel’s background in spiritual studies allowed him to make vital linkages between the findings of the French Radiesthesiasts and spiritual phenomena. Although artifacts of various spiritual traditions had been examined for their vibrational qualities by Turenne, de Belizal, and Chaumery, there was no real spiritual frame of reference in their works. These French researchers saw their work as an extension of modern Physics, with the hope that it would be accepted by the mainstream Physics community.

Enel on the other hand had spent his adult life around spiritual healing circles and studying the Jewish Kabbalistic mysteries; these sometimes merged into discussions of highly esoteric healing methods, such as appeared in his book *Magic Cures of the Twentieth Century* which was published in French in 1929.

After moving to Egypt from Russia in the wake of the Bolshevik revolution, Enel was then able to study Ancient Egyptian

sites and artifacts first hand. This led to his applying concepts from the Jewish Kabbalah to understanding the Ancient Egyptian spiritual mysteries, the subject of the majority of his writings. His books originally appeared in French, with only one that I am aware of being translated into English: the 1936 edition of *Message from the Sphinx*. As mentioned above, he did not write about his work with Radiesthesia until the publication of his 1949 book, and none of his Radiesthesia related texts were ever made publicly available in any language other than French.

We will provide a short overview of Enel's Radiesthesia work, focused on the topics relevant to this course:

1. Enel's Background with Vibrational Healing and Color
2. Rays of Illness and Curative Rays
3. General Radiesthesia Principles
4. Spiritual Dimensions of Radiesthesia Waves
5. Summary of the Discoveries of Enel

1. ENEL'S BACKGROUND WITH VIBRATIONAL HEALING AND COLOR

Enel came to French Radiesthesia from a background in European methods of Vibrational Healing.

Enel cites in his works the importance of the early vitalist concepts of Baron von Reichenbach, who introduced the concept of "Odic force" in 1845. This led to the research of Col. De Rochas, whom Enel states he had trained with in 1904 and whom he maintained contact with until the death of De Rochas.

De Rochas created a method of healing based on the human being emitting two distinct and polar opposite energies: a Positive, Red energy on the left side and a Negative, Blue energy on the right side of the body. In his first book on Radiesthesia in 1949, Enel wrote that De Rochas found that the normal function of organs would be disrupted if these two polarities in the body were not properly balanced and kept in equilibrium. Enel noted that De Rochas (translated from the French original text):

"called these unknown vibrations "sensitivity" or "motoricity" signifying the direction (soul) of man, or in other words, his moving force.

Unfortunately after his death, no one pursued his research and it was only around 30 years later that there was this giant step with this new science called Radiesthesia."

THE ADVANCEMENT OF HEALING SCIENCE THROUGH RADIESTHESIA

Enel believed that French Radiesthesia had succeeded in moving further ahead the research which he had been exposed to as a young man:

"The principle difference between contemporary Radiesthesia and the discoveries of Reichenbach and de Rochas is that the two pioneers had uniquely found the two opposing poles of radiations (Red and Blue) while the contemporary Radiesthesists operate on all the colors of the solar spectrum, and the several invisible rays such as Ultra-violet and Infra-red. "

Enel noted each human being had a unique "color" combination, and that these are in fact vibrations and not to be thought of as ordinary colors:

“I have said that all human beings as well as all inanimate objects emanate vibrations that we call “color rays”. In a complex being, such as a human, they are numerous and different, but there is always a ray that we term the “principal”, constituted of the specific combination that individualizes the being and represents his “individual color”. But listen to this: while we call these unknown rays “colors” in reality they are not colors in the ordinary sense of this word. This term is used in order to simplify their definition and to determine their place in the entirety of the solar spectrum.

Thus, “radiesthetic colors” are not necessarily identical to the color of an object. For example, “the color” of iron is red, that of mercury is green, and so forth. In a plant, the radiesthetic color is rarely that of the color of the flower or leaves.

In order to be able to find the particular individual color of an object, it is necessary above all to search for its “radiesthetic color”. This is the point of departure for any radiesthetic operation. Having found the individual “color” of an object, one can judge the influence of the vibrations that the object receives from the exterior as well as those that it emits itself. This allows us to establish if an object is in harmonious relationship with another, or if its vibrations are opposed to it.” [Emphasis added]

HEALING WITH VISIBLE COLOR

Enel understood that the “Colors” in Radiesthesia were subtle vibrations and not necessarily visible colors. However he also had extensive experience in applying vibrational healing through visible colors as well, applied through charged water, visible light, or colored lampshades:

“It has been proved by experiment that if one exposes water in a colored bottle to the sun for a certain time, it acquires radiations characteristic of the color of the recipient [bottle].

I have experimented and found this method satisfying in certain cases and for certain colors. Orange, for example, is a good purgative, while Blue has a contrary effect.

In order to prepare a colored water, fill a glass bottle of the desired color and expose it for two to three hours in the sun or a bright electric light; in the latter case, a longer time will be required.”

“Certain persons replace sulfate of caustic soda or other salts with Orange water; the beneficial effects of this water have fervent supporters. In a case of diarrhea, Blue water taken in normal dosage gives the same good results.

I can only recommend these two colored waters for internal dosage. Other colors can be prepared in the same way, but I only recommend them for exterior use.

For example, ***Green water is a good disinfectant, Red water in hot compresses, while Violet or Blue water is good for calming compresses.*** “

“The effect of violet light on rheumatic pains, gout, etc., is known throughout the world. Other colors can be used as well. These colors are obtained by colored lamps or colored tubes that let the necessary color ray from the solar spectrum pass.

I have already spoken of the exciting effect of red light on a nervous person.

I recommend to nervous people, those subjects with headaches, to expose the nape of the neck to blue light for about two hours every day. This would soothe them and even heal them if their trouble is not caused by an internal disorder. Ordinarily people use green lampshades for work; I only recommend this color for the reasons already explained in the preceding chapters. It would be preferable to replace the green lampshade with a blue lampshade to rest the eyes and even more calming for the nerves.”

TYPING COLORS ACCORDING TO POSITIVE AND NEGATIVE

Just as his mentor De Rocas had applied a polarity system based on color to healing the human body, so did Enel approach Radiesthesia colors at times from a polarity perspective.

“In the first place, all the colors are divided into two groups:

- 1) Positive colors: Red, Orange, Yellow, Infra-red, Black.
Negative colors: Blue, Indigo, Violet, Ultra-violet, White.
Green is simultaneously positive and negative.

2) Acids: Red, Orange, Yellow, Infra-red, Black are the warm and exciting radiations.
Alkalines: Blue, Indigo, Violet, Ultra-violet, White are the generally cool and calming radiations.”

“Green is found between these two groups and is simultaneously positive and negative, reuniting the characteristics of its two neighbors, yellow and blue (of which it is a mixture). “

Enel applied this polarity principle to his own approach to healing, as in the following passage:

“We take for an example an illness caused by too much action of positive vibration, say Red. It is normal that one try to reestablish the equilibrium by the reinforcement of negative vibrations, or Blue. Suppose now that in the prescribed diet the foods themselves emit positive vibrations, these foods not only will paralyze the curative action, but they will increase the disequilibrium.”

Enel asserted that different sources of a color all give a response when tested with Radiesthesia, but that the different sources have different qualities which a sensitive pendulum operator will detect. He also noted that the color chosen for healing needs to be pure, in order to obtain the best results:

“As the reader has been able to understand, the choice of an appropriate color is the most important thing in radiesthetic treatment. This is true for all kinds of treatments whatever the mode of operation. If one operates by the simplest procedures using small pieces of colored fabric, it is necessary to choose the exact color that gives the best results. To explain: each color possesses numerous nuances. Even in the solar spectrum only the middle band of the color can be found in pure form. The sides of the band present the nuances that serve as transitions between neighbor colors.

If we take red, for example: it exists in the red of oxblood, in brick red, as cerise, etc. All the colors are classified as red and respond to the red of the

Universal Pendulum, but an operator accustomed to the movements of his pendulum will notice that above one red the pendulum gyrates frankly and with strength, while above another, its movement will slow and sometimes with perceptible difficulty. In order to obtain the best result in choosing a colored fabric, it is necessary to stop on the nuance that gives the strongest gyration of the Universal Pendulum.

It is necessary to find and apply a pure color, because it alone gives the best rendering.”

2. RAYS OF ILLNESS AND CURATIVE RAYS

Enel was very focused on healing applications of Radiesthesia, including its use in mainstream medicine, as stated in his book *First Steps*:

“...the radiesthesist comes to the aide of the physician by procuring the sure way to find the cause of the illness and to choose precisely the elements necessary to reestablish the lost equilibrium of the body of the patient. Already a large number of physicians in various countries have understood and appreciated the help that the radiesthesist can give them. In France more than 2500 doctors practice radiesthesia or consult with a radiesthesist in order to diagnose complicated cases. The physician and the radiesthesist collaborate not only for establishment of diagnosis, but also for the choice of the medication that will reestablish the equilibrium of the patient.”

A primary interest for Enel was identifying the Vibrational Ray of an illness and which Vibration would neutralize the illness Ray:

“I noticed that for cancer and certain other serious maladies, two examinations were required: 1) Find the curative ray... and 2) Find the radiation characterizing the ailment itself. “

Enel from his 1959 book *Treatment at a Distance by Radiation*.

Enel described the Bands in which he found rays of specific illnesses, and then the Band (or material) with the “curative ray”.

“It is interesting to note that the diagnosis of cancer by Radiesthesia is prior to all other known methods. Certain English radiesthesic physicians were able to heal more than thirty cases of this terrible illness, thanks to radiesthesic diagnosis.

Assiduous research in laboratories has resulted in the finding of characteristic colors of certain types of microbes as well as the colors that kill them.

Here is a list of certain microbes with their individual colors and their antidotes.

CHOLERA, Black: killed by Blue and Copper.

TUBERCULOSIS, Yellow, canary: killed by White, the sun, fresh air.

PNEUMOCOCCUS, Black: killed by Violet. (Agent of pneumonia, pleurisy, meningitis, nephritis.)

TYPHUS, Red-Black: killed by Yellow-Green (in 15 minutes).

STREPTOCOCCUS, Green-Blue: killed by Negative Green (eucalyptus, lavender).

PYOCYANIC, Blue-Red-Green: killed by Black (essence of rose).

MENINGOCOCCUS, Red (Bordeaux), killed by Violet (essence of clove). (Agent of mucous naso-pharynx and cerebrospinal liquid.)

DYSENTERY, destroyed by heat, Blood-Red (incense)...

The study of waves of microbes is in its infancy and long experiments are necessary to find the healing wave capable of definitely killing a microbe. Until now, experiments with certain microbes, notably that of cholera, have given satisfying results.”

NOTE: Enel relates the fundamentals of his approach to the Rays of Illness and the Curative Rays in his text *Radiations from Shapes and Cancer*. For those wanting to go more deeply into understanding Enel’s specific methods of testing and his later differences of opinion with de Belizal, see his 1959 book *Treatment at a Distance by Radiation*. Note that his methods and perspectives are more complex than those given in this course.

If you read Enel’s Radiesthesia related books, be aware that his complex later perspectives regarding “Negative Green” described in his *Treatment at a Distance by Radiation* were rather questionable, and were directly rebutted by de Belizal in his text *Micro-vibrational Physics and Invisible Forces*. De Belizal does not mention Enel by name, but it is clear to whom he is referring in his rebuttal.

In this training we are following a relatively simple and direct path through essential aspects of the French Radiesthesia research. However please be aware that these kinds of more complex issues do arise when you enter into the original French texts, which were written by researchers deeply immersed in technical aspects and who practically applied this work over decades of vibrational testing and healing.

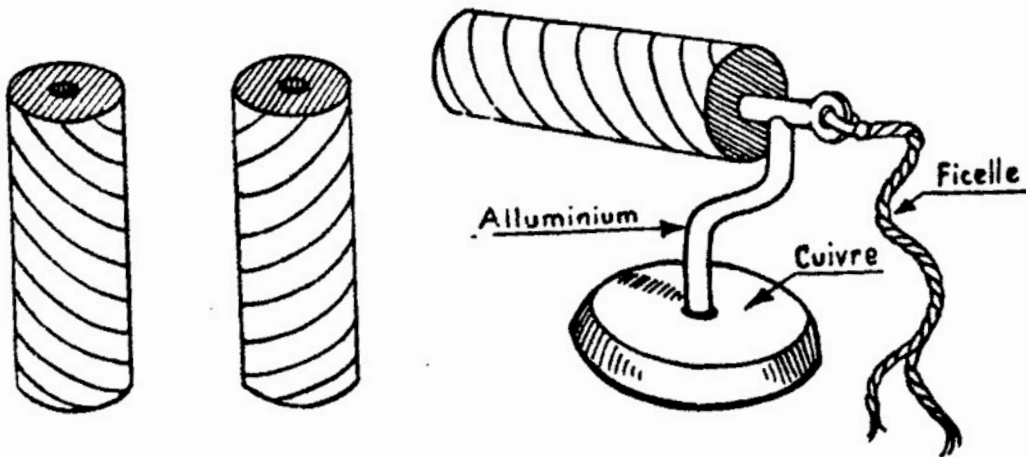

3. GENERAL RADIESTHESIA PRINCIPLES

Enel emphasized a number of fundamental Physical Radiesthesia concepts in his texts.

SHAPE-CAUSED WAVES

Enel applied basic shape-caused wave principles from the works of Turenne and de Belizal, as seen in this excerpt below from *Radiations from Shapes and Cancer*. Here he describes the creation of cylinders which emit rays of a specific Vibrational Band from their ends, based on the angle of a helix drawn on the exterior of the cylinder.

“Helices drawn on cylinders at various angles give the complete gamut of the colors of the spectrum, the differences being obtained by the degree of inclination of the constituent angle of the helix. This is a shape-caused vibration that also can be classified in the spectrum of the colors while not being a ‘color’.”

RESIDUE (VIBRATIONAL IMPRINTS)

Enel addressed the issue of inaccurate vibrational radiesthesia testing due to what he calls “residue”; this is the vibrational imprint left by another subject which was previously in the same location where something else is now being tested. He also emphasized that this type of vibrational imprinting could happen to the pendulum being used to test,

which must be kept clear. He discusses these topics in the following translated excerpt (emphasis added):

“‘Remanence’ is a radiesthesic term from the English word ‘to remain’. Every radiesthesist knows the effect of this phenomenon, but the beginner could be deceived by a false diagnosis without understanding the reason.

This is residue: suppose that you put a metal or other substance on your worktable and you determine its color wave. After having removed the object, you find the radiation of this same wave remaining on the spot where it sat. The strength and duration of this resonance depend upon how long the object had occupied the same place and the intensity of its radiation.

Residue is the principal reason why radiesthesic determination of the sex of eggs has not been applicable in the large chicken farms. It is easy to define the sex of an embryo in an egg by the direction of the pendulum: for the pullet the pendulum circles and for the cockerels it oscillates. But if it is necessary to check hundreds of eggs, there comes a problem, because residue falsifies the diagnosis. **In order to eliminate this problem, it is necessary to place each egg in a virgin place or on its own clean sheet of paper.**

In addition it is necessary to “disinfect” the pendulum after examining each egg. All this complicates the work and renders it impossible in a large operation.

For research on metals, either onsite or using a map, it is always necessary to entertain the possibility of finding, not the object of the search, but its residue.

In order to understand if your pendulum circles on a radiation coming from the object itself or from its residue, proceed in the following fashion: place a thick paper on the place or the source of the radiation. If the gyration is caused by a residue, the pendulum stops. If it continues to circle, the source of the radiation is real...

In order to “disinfect” the pendulum of a possible residue just touch it to the ground. In order to “disinfect” yourself (this is indispensable if one must successively examine various persons), blow vigorously on the hands, rub one against the other, and make a gesture of throwing something into the earth. **It is also good to wash the hands well after every examination.”**

Note: Enel’s discussion of residual energies possibly confusing Radiesthesia testing is helpful, as are some of his suggestions. Washing the hands after every examination is a very good idea. However his saying that a pendulum can be cleared of residual energies just by touching it to the ground is only true in cases where the pendulum is only lightly infused, such as having static charge built up. In other cases the pendulum will require more thorough clearing.

There is also the issue of the area of Earth that is being connected to, which is also an issue often overlooked by those who say to clear crystals by putting them in the ground; if the area of the ground used is one with serious toxic earth radiation, such as the crossing toxic geopathic gridlines, then the pendulum, crystal etc. will only become more infused by toxicity by connecting it to that location on the Earth.

THE PROBLEM OF AUTO-SUGGESTION OF RESULTS

One of the most fundamental problems in accurate Vibrational Radiesthesia testing is auto-suggestion, in which a person influences the pendulum by their own expectations. In the first class in this series The Personal Wavelength I discussed this issue in detail; at a deeper level **it is really a problem of a person generating and projecting their own thoughtforms, which they then test rather than the actual vibrational field of the subject they are supposed to be testing.** The practice for Mental Clearing given in the first class, and repeated later in this class, can eliminate this problem.

Enel addresses this topic in a very simple way, in the following excerpt:

“The novice will often make errors of diagnostic causes by auto-suggestion. To remedy this, it is necessary to learn to create in oneself a state of passivity and receptivity to the impressions coming from the outside. Never approach a case with a pre-conceived idea.”

4. SPIRITUAL DIMENSIONS OF RADESTHESIA WAVES

Enel followed closely the work of de Belizal, with a particular interest in the Negative Green Vibration which he describes below:

“Radiesthesia of our day serves all the colors of the spectrum and possesses thus a larger field of action than what was known in the time of Rochas. But the possibilities are even larger and surpass the limits of the visible spectrum because radiesthesia operates also with certain invisible colors such as Ultra-violet, Infra-red, White, and Black. Between the latter two, 180° opposite from Green of the spectrum, we find a mysterious radiation, stronger than all the other colors.

Certain people, like H. Mellin, call this radiation “gray” due to the fact that it is between Black and White and that it represents the mixture of those two colors, in the same way that green is a mixture of Yellow and Blue. But I prefer the appellation of Chauméry and de Bélizal who call it Negative Green by its opposition to Green of the spectrum: the pendulum circling clockwise over Green will turn in the opposite, or negative, direction over this mysterious radiation.”

Enel tested the Negative Green Band in different phenomena. As mentioned earlier, Enel had a much more spiritually-based perspective than had the earlier French researchers, so his testing included finding the relationship of Negative Green to Spirituality.

One of his major discoveries resulted from his testing around the tombs of the Coptic Christian Saints in Egypt. He found that around the tombs of these Christian Saints were extremely high concentrations of the Negative Green vibrational band. He discovered that the intensity level of Negative Green increased in a person’s energy field when one engaged in prayer or higher spiritual work. Enel believed that the intensity level of Negative Green in person’s energy field could be used to identify the level of their spiritual development.

Enel showed that Negative Green was not just a “Carrier Wave” which could transport other energy qualities (which had been demonstrated by Chaumery and de Belizal) but that it was in fact a Spiritual Carrier Wave as well.

Enel's work would later help Dr. Ibrahim Karim to understand the deeper spiritual dimensions of Radiesthesia energies. This would culminate in Dr. Karim's vital discovery of the Vibration of the Center and how it manifests through the three energy qualities of the "BG3", as we will see later in this class.

5. SUMMARY OF THE DISCOVERIES OF ENEL

1. Enel brought a new spiritual dimension into Vibrational Radiesthesia, based on his extensive background in studies of the Jewish Kabbalah and the Ancient Egyptian Mysteries. He found that Negative Green acts not just as a physical carrier wave, but also as a *spiritual* carrier wave.
2. He understood that Vibrational Radiesthesia was a huge step forward in understanding subtle energies used in healing, dramatically advancing the methods of Reichenbach and De Rochas which he had trained in decades earlier.
3. Enel identified specific Rays of Illness and Curative Rays, using the 12 band Vibrational Spectrum.
4. He emphasized core Radiesthesia principles for accurate testing such as not being confused by vibrational imprints from other phenomena, keeping the pendulum clear, and not auto-suggesting results.

E. DISCOVERIES OF DR. IBRAHIM KARIM: BIOGEOMETRY® & THE POWER OF THE CENTER

The person most responsible for bringing French Radiesthesia into the modern day is Dr. Ibrahim Karim of Cairo Egypt, the founder of BioGeometry®. It was Dr. Karim who first introduced me to French Radiesthesia, and who allowed me to assist him in creating the first standardization of the BioGeometry Foundation and Advanced Trainings.

Dr. Karim is an architect who was introduced to French Radiesthesia by his friend Dr. Khalil Messiha, a Coptic Christian medical doctor in Egypt. Dr. Messiha became known for his success in using radiesthesia in his medical practice, needing only a classic radiesthesia “witness” (sample of hair, blood, or sputum) to diagnose a patient’s ailments followed by combinations of orthodox and alternative treatments. Dr. Messiha introduced a different method of radiesthesia diagnosis, using just a person’s fingerprint rather than the standard witnesses just mentioned. He found that the fingerprint was not only safer to work with (being non-infectious) but also was effective for a longer period of time than the fluid samples.

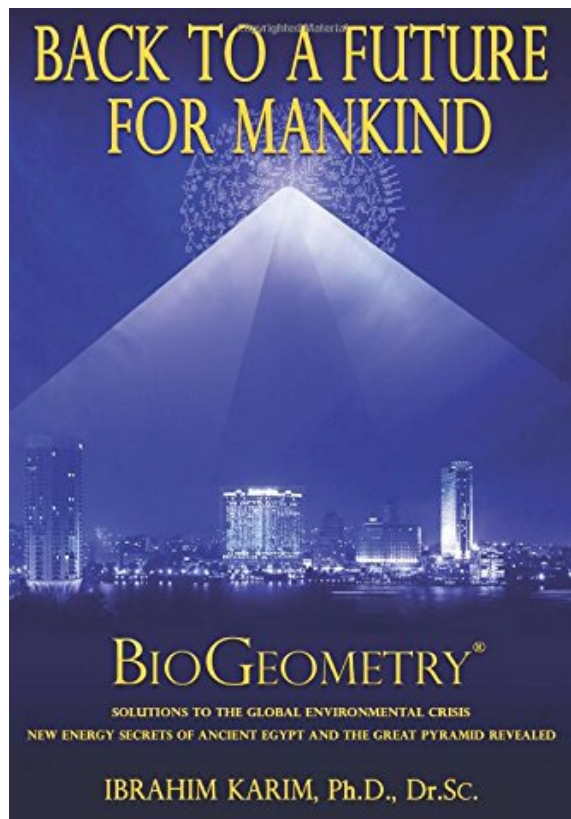

Dr. Karim was interested in learning more about French Radiesthesia after learning its foundations from Dr. Messiha. Knowing that the French pioneers of Scientific Radiesthesia were associated with an organization called the House of Radiesthesia (Maison de la Radiesthésie, which also published many research works) based in Paris, Dr. Karim decided to visit the Maison during a trip to Paris in 1973.

Dr. Karim was greeted by Madame Lambert, the administrator of the Maison whose late husband had been its founder. When Dr. Karim informed her that he had come in search of information on Scientific (Physical) Radiesthesia, she replied that there was little of that work going on anymore, and at that point virtually everyone worked in mental (psychic) dowsing instead. Madame Lambert noted that her husband had been a close associate of Chaumery, de Belizal, Turenne and many other pioneering researchers in Scientific Radiesthesia. Much original work from the great scientific radiesthesists -- their original research instruments, rare texts, etc. -- were still stored in the Maison’s basement, gathering dust.

It was apparent in their exchange that she took a keen interest in Dr. Karim; after further conversation she told Dr. Karim that she had been waiting for someone to arrive to carry this work forward, and that she now knew it was he. She then took Dr. Karim into the storage area and gave him as a gift the extensive archives of Scientific Radiesthesia which had been accumulated there. Although he offered to pay for this wealth of material and tools, she refused to accept payment. As Dr. Karim would later say, “It was

a treasure one could not buy”.

Madame Lambert chose well in selecting Dr. Karim to entrust the archive to. He worked tirelessly with Physical Radiesthesia techniques for decades, making major new discoveries in addition to clarifying and simplifying many of the French techniques. He has also greatly expanded the paradigm behind Physical Radiesthesia into a new “Physics of Quality.”

Dr. Karim credits Physical Radiesthesia for providing the basis for his creation of modern BioGeometry®, through building on the discoveries of the great French Radiesthesiasts. Dr. Karim also identified unsafe aspects of the French methods, developing a safer methodology for students how to test and apply energy qualities. He has added a wide range of essential tools and techniques which make Physical Radiesthesia vibrational methods more powerful, more effective, and easier to apply in practical situations.

Dr. Karim has at the time of this writing one book available in English (and in several other languages) introducing BioGeometry; it is entitled ***Back to a Future for Mankind***.

I highly recommend attending the BioGeometry Foundation and Advanced Trainings to learn the full system which Dr. Karim has created, which offers many brilliant

insights and techniques that are not available

from any other source. See www.vesica.org for the BioGeometry trainings offered by Dr. Robert J. Gilbert, and see www.biogeometry.com for a full list of courses offered by instructors around the world.

Because complete trainings in Dr. Karim’s BioGeometry system are currently available in multiple countries (unlike the work of the other researchers covered in the previous sections) we will only briefly describe a few key aspects of his work which are relevant to this class:

1. Discovery of the Energy Quality of the Center
2. New Radiesthesia Testing Tools
3. Energy Transmutation through the “BG3®”
4. Resonance, Harmonics, and a New Physics of Quality
5. Advances in Shape-Caused Wave Research
6. Improving Safety in Radiesthesia
7. Summary of Discoveries of Dr. Ibrahim Karim

1. DISCOVERY OF THE ENERGY QUALITY OF THE CENTER

As we have seen, the French Radiesthesiasts discovered the 12-Band Vibrational Spectrum in the 1930's. Each of these 12 Bands has a polarized nature; for example de Belizal described how Positive Green is the opposite polarity (and antidote) to Negative Green. Enel divided the Bands into polarity categories of positive and negative, acid and alkaline.

The complete spectrum of 12 Vibrational Bands forms naturally around the perimeter of any shape, the most archetypal form being the Sphere or Circle. This is connected to the classical Sacred Geometry concept of the "12 around the 1" with the 12 forming the periphery around the 1 in the center.

Dr. Karim discovered the answer to questions the French Radiesthesiasts apparently had never thought to ask.

Is there an archetypal energy quality which is not polarized, but connects to the primal unity?

What is the vibration found in the center of the Circle, rather than on the periphery of the circle which manifests the Vibrational Spectrum?

Through direct Radiesthesia analysis, Dr. Karim discovered that within the Center of any Circle is a vibrational quality which is not polarized; it is what Dr. Karim sometimes refers to as "the ONE energy quality." This unified source energy appears in the Center of any shape in 2D or 3D, creating literally a "transcendental gateway beyond space and time." Dr. Karim discovered in his research that the ONE energy quality in the center of the circle has three energy quality components, a kind of trinity within the unity.

Dr. Karim was aware from the work of Enel that Negative Green was a prime energetic component of spirituality; Enel believed that the intensity of the Horizontal wave of Negative Green in the energy field of a person could indicate their level of spiritual development. **Dr. Karim discovered that a particular sub-location (sub-band) within the overall Horizontal Wave of the Negative Green Band was the first of the three Vibrational Components of the energy quality of the Center.**

The second energy quality found in the Center is found at Dawn, a quality which resonates with the Angelic realm. Dr. Karim associates it with the "Spiritual Light" concept found in some spiritual traditions, and also has called it the "Atmosphere of the Angels." It can be detected within a sub-band of the Horizontal Wave of the Ultraviolet Band. This energy quality does not originate on the physical level, but rather on a higher plane level; it connects to the physical plane through Resonance and Harmonics, which are essential concepts in Dr. Karim's BioGeometry system. **In BioGeometry this second energy quality component of the Center is called the "Higher Harmonic of Ultraviolet."**

The French Radiesthesiasts had used samples of physical Gold to detect locations of Gold in the ground (an application of the “Law of Similars”) but had never made any spiritual observations related to Gold. Dr. Karim noted that spiritual traditions all over the world showed a Golden Radiance around the heads or the entire bodies of Saints and Spiritual Masters; he discovered that **a piece of Gold could be used to detect not only physical Gold, but also through Resonance could detect an energy quality existing on a higher spiritual plane level. Dr. Karim named this higher energy quality which is in resonance with physical Gold the “Higher Harmonic of Gold.”** It can be detected in a sub-band of the Horizontal Wave of either the Orange or Indigo Band.

Dr. Karim discovered that when a person prays, they emanate a strong Higher Harmonic of Gold energy -- even when not wearing any physical gold. He realized that the artistic representations of Saints and spiritual masters with Golden light around their heads or bodies were *literal depictions* encoding vital information about human energy fields. The Higher Harmonic of Gold energy quality is so significant that Dr. Karim will often simply use the term “Gold” when describing the the unified field of all the three energy qualities of the Center. **The Higher Harmonic of Gold is the final component of the three vibrational qualities of the center.**

The Three Energy Qualities of the Center

HORIZONTAL WAVE OF “NEGATIVE GREEN”

- *Transmits energy and information*
- *“Spiritual Carrier Wave”*

HIGHER HARMONIC OF ULTRAVIOLET

- *Deep energy revitalization*
- *“Atmosphere of the Angels”*
- *“Spiritual Light”*

HIGHER HARMONIC OF GOLD

- *Energizes and Connects to Ultimate Balance*
- *Emanation of the “Plane of Divine Wisdom”*

Together these are termed in BioGeometry® the “BG3”

Dr. Karim named these three energy qualities found in the Center of every circle (and also found in the center of every other shape, as well as other phenomena) the “BioGeometry 3” or simply the “BG3”.

Please be aware that “BG3” is a copyrighted trade name; as a term for public use Dr. Karim will often use the aforementioned term “the ONE energy quality.”

In this training we will refer to this special unpolarized energy quality of the Center as the “Centering Vibration”. This term emphasizes the practical aspect of this energy in helping to Center and create Ultimate Balance within energy systems.

2. NEW RADIESTHESIA TESTING TOOLS

Dr. Karim has developed a new generation of Radiesthesia testing tools, allowing easier and more precise detection of the complete 12-band Vibrational Spectrum and of the BG3® Centering Vibration.

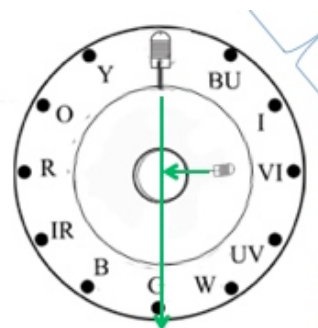

THE VERTICAL AND HORIZONTAL WAVE PENDULUM SET

When Dr. Karim first began publicly teaching his BioGeometry system, students used the French Virtual Cone Pendulum developed by de Belizal and Chaumery. Dr. Karim conducted research for years to create a better pendulum design to detect the complete 12-Band spectrum, resulting in the creation of the Vertical and Horizontal Wave Pendulum Set.

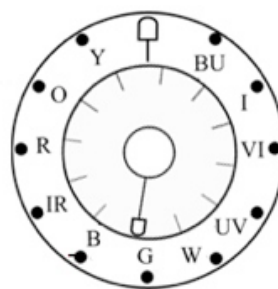

As discussed in detail in the live BioGeometry trainings, Dr. Karim modified the Hemisphere pattern used by de Belizal and Chaumery and added to it other geometric patterns. **He thereby developed the copyrighted Energy Emitter Pattern shown to the left, which creates a**

Negative Green ray down the Dial face on the Pendulum.

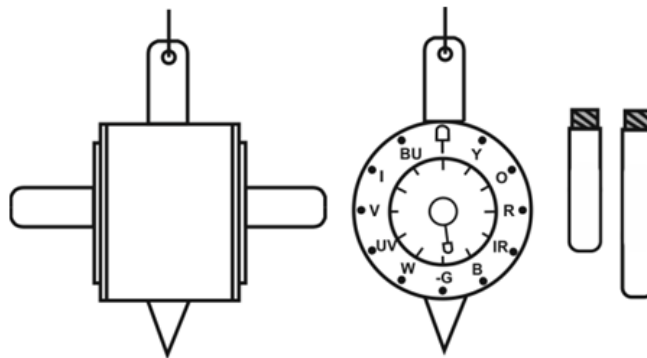

That ray (shown in the picture to the upper right) acts as what is described in BioGeometry as an “Energy Key”; this is a linear flow of energy which manifests the circle of the complete 12 Band Vibrational Spectrum. A smaller Dial with a similar Energy Emitter Pattern is used as a pointer to select a particular Band in the spectrum to test for (pointing toward the VI for Violet in the picture above.)

Instead of testing for Vertical and Horizontal Waves with one Pendulum (as with the Virtual Cone Pendulum), Dr. Karim created two separate Pendulums. The Horizontal Wave Pendulum (shown in side and top views directly below) detects only Horizontal Waves. It has one dial face to select the Band to test for.

The Vertical Wave Pendulum (below) detects only Vertical Waves; it has two Dials to detect the Bands being tested for. When only testing for one Band, both Dials are set to that Band; however it is possible to test for more complex phenomena by setting the two Dials to different Bands. This is used for example in testing for different types of Earth Grids, as we will show you later in this training. The Vertical Wave Pendulum also features two metal length extensions which can be screwed when needed into the bottom of the pendulum; these act like an antenna to help tune into particular Earth Grids.

Dr. Karim's Vertical and Horizontal Wave Pendulum Set (hereafter V & H Pendulums) was formerly reserved only for the use of students in the official BioGeometry trainings; however Dr. Karim was kind enough to create a guide to its use which now allows us to sell this pendulum to the public, and to use it as our primary pendulum in this general Radiesthesia online training.

The V & H Pendulum Set offers some significant advantages over using the older French Radiesthesia designs (such as the Virtual Cone Pendulum) to detect the Vibrational Spectrum:

1. They do not require as accurate a calibration of the cord length to work properly.
2. They are designed to only detect one type of wave (Vertical or Horizontal) and will not detect the other type of wave (ie, avoids false readings.)
3. Can be used to detect sub-bands within the overall bands (ie the pointer can be set to any sub- location within the complete range of the band), if desired.
4. Vertical Waves can be more precisely tuned into by using the two Dials on the Vertical Pendulum, in order to test for the presence of two Vertical Wave Bands at the same time; this allows for the detection of Band combinations which identify certain phenomena.
5. The major Geopathic Earth Grids (Hartmann and Curry grids) can be differentiated from one another by using the Two Dial detection method on the Vertical Wave Pendulum just mentioned, and also by using the length extensions on the bottom of the Vertical Pendulum (each of which is tuned to detect one specific type of Geopathic Earth Grid.)

We will discuss the use of these Pendulums in much more detail in Part 2 of this class.

THE BG3 PENDULUM

As mentioned previously, each of the BG3 (the three vibrational components of the energy quality of the Center) can be detected in specific sub-bands of the complete Vibrational Spectrum, meaning that **each separate component can be tested for on the Horizontal Wave Pendulum.**

However this does not tell you if the true BG3 (Centering Vibration) is actually present; for that you need to test for all the bands of the 3 components being present, and even then false positives are possible if those bands are present due to other phenomena within those bands.

Dr. Karim developed a simple and easy Pendulum to test specifically for the BG3. This came about in relation to University courses in BioGeometry design taught in Egypt, where Dr. Karim was able to offer principles of BioGeometrical design to students but was not allowed to go into too much Radiesthesia or esotericism. He developed the BG3 Pendulum so that the students in the Design courses could test their designs for BG3 very easily, even with very little background in Radiesthesia. This BG3 Pendulum is now available to the general public, and is imported from Cairo Egypt by the Vesica Institute to offer to our students.

Within the advanced Energy Science taught in BioGeometry courses, certain aspects of design are known to create specific vibrational qualities: shapes, angles, number of design elements, etc. The number 16 is related to the “Golden Proportion”; when brought into a design as 16 similar elements in a group, it can generate the BG3 energy quality (there are many other number patterns which also generate BG3, which are taught in the BioGeometry trainings.)

The BG3 Pendulum uses 16 disks in its design, which allows it to detect the complete vibration of the BG3 without at once without having to test its separate components.

This makes testing for the BG3 much faster, easier, and more accurate than by testing its separate components in the different Bands.

OTHER TOOLS DEVELOPED BY DR. IBRAHIM KARIM

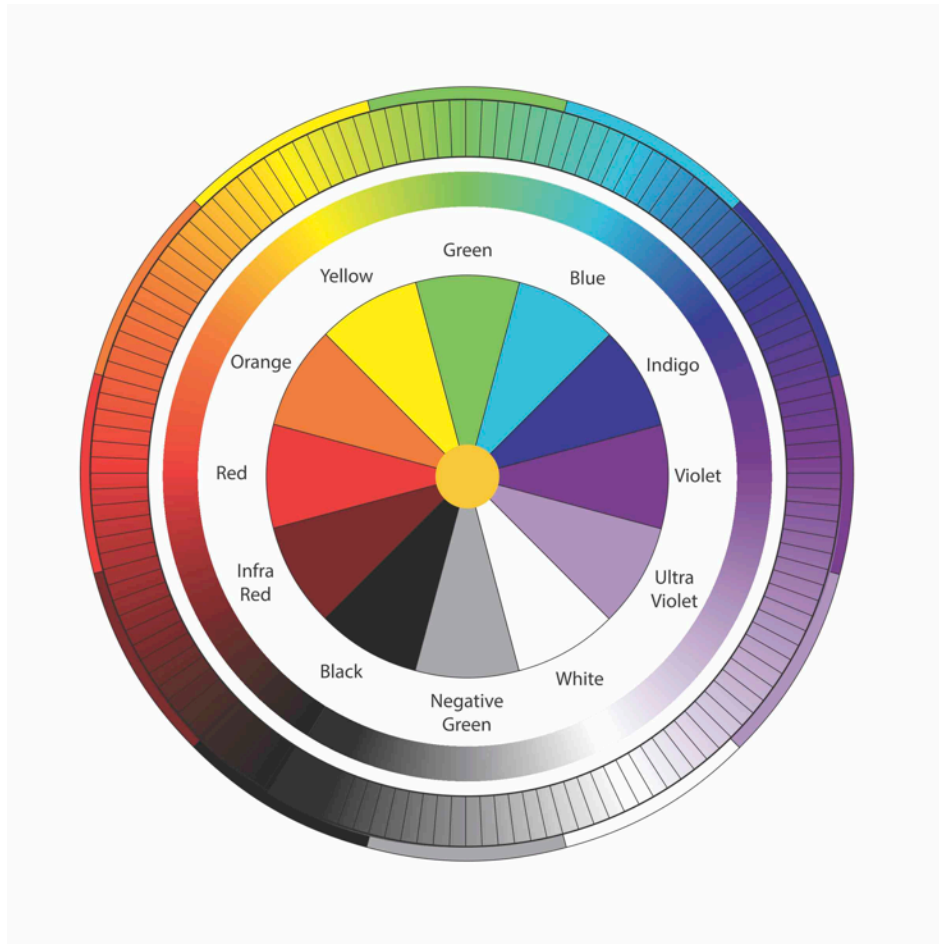

The V&H Pendulum set and the BG3 Pendulum will be used in this training to detect the Vibrational Spectrum and the Centering Vibration.

There are many other tools for Testing and for Balancing Energy developed by Dr. Karim, including:

- * The *Ibrahim Karim Universal Pendulum* (IKUP) as an advanced form of Neutral Pendulum.
- * The *Human Archetype Ruler* as an advanced form of testing BG3 on 10 different quality levels, and on 7 different plane levels. This amazing tool is based on a Vibrational Pattern which Dr. Karim found energetically embedded on the walls of Ancient Egyptian Temples.
- * The *BioGeometry Medallion*, which has a large number of “BioSignatures” developed by Dr. Karim to balance functions in the human energy field.
- * The *BioGeometry Home Kit*, which includes the *BioGeometry Cube*, to balance the energy in homes or offices.
- * The *BioGeometry Dial*, for tuning in specific angles to balance energy fields.
- * The *Material Balancing Wheel*, for creating BG3 emanations from any material.
- * The *Hemberg Emitter*, to project rays of BG3 to transmute the energy field of distant sources of vibrational toxicity.

These tools, along with a large number of practical energy balancing techniques unique to BioGeometry, are taught in the BioGeometry Foundation and Advanced Trainings.

3. ENERGY TRANSMUTATION THROUGH THE BG3®

As mentioned previously, de Belizal had discovered that the most dangerous of the Electric (Vertical) Waves is in the Negative Green Band.

To counteract the toxicity of the Vertical Wave of Negative Green (V-G), he applied the opposite polarity to neutralize it: the Positive Green (+G) band which is diametrically opposite -G in the circular spectrum originated by Chaumery and de Belizal.

This Polarity Balancing method is an application of the common vibrational healing principle of applying an opposite polarity to counteract an excess; conceptually it is similar to a Chinese Medical Practitioner using a “Yin-Yang balance” approach by applying burning Moxa to an acupuncture point which is too cold in order to warm it up, or having a client take a cooling herb in order to counteract an excess of heat within an internal organ. In color therapy this Polarity Balancing method manifests as applying a “cooling” color (Blue, Indigo, Violet) to pathological heat conditions and applying a “warming” color (Red, Orange, Yellow) to pathological cold conditions. In modern Western Medicine the same concept is applied by using specific pharmaceuticals to stimulate underactive organs, or to sedate overactive organs.

If we see the continuum of hot vs. cold, overactive vs. underactive etc. as a simple straight line, then the healthy balanced state is in the *center* of that line between the two extremes. For example, when a sedating influence is applied to an overactive system, the goal is to bring the system back to the balance point of the center after it had strayed into one extreme. This requires a specific dosage of the sedating influence in order to bring the overactive excess perfectly to the balance point, and to not sedate so much (overdose) that the system then goes out of balance in the opposite direction.

This Polarity Balancing approach is common throughout both mainstream and holistic healing systems.

However there is another option rather than Polarity Balancing: it is to connect the out of balance system *directly to the center* rather than trying to “push” it from one extreme towards the center by using polarity methods. This approach is much less common, and is less understood in modern healing circles.

Dr. Karim’s discovery of the BG3 makes it possible to create a connection directly to the center, by applying this Centering Vibration to a system.

Any method which generates the BG3 -- and there are many -- can help to Center an energy system.

One of the most simple and universal methods for creating this “Centering” vibration is through Blessing and Prayer. Just as Enel found that Saints had generated large amounts of Negative Green vibration in their energy fields through their spiritual practices, so anyone can generate strong BG3 emanating from their energy field through sincere Blessing or Prayer. Also other types of optimal internal states of thought and feeling -- Compassion, Love, Forgiveness, Joy -- can potentially generate strong BG3 in the human energy field.

Whereas de Belizal used the Polarity method to neutralize Vertical Waves of Negative Green through the use of Horizontal Waves of Positive Green (note that there is a polarity both between the Vertical and Horizontal Waves, and also between -G and +G), Dr. Karim found that it was possible to use a kind of “energy alchemy” to transmute the detrimental effects of V-G into the beneficial qualities of the BG3.

In classical alchemy, a base material (for example Lead) is transmuted into a higher material, Gold. Dr. Karim found that an alchemical change of the V-G detrimental energy quality into “Gold” (the BG3, which includes the Higher Harmonic of Gold energy quality) can be easily accomplished by simply applying a strong BG3 radiating source directly onto the source of V-G. The V-G becomes very weak or impossible to detect, and the BG3 then becomes very strong where the V-G was previously present. When in BioGeometry a Geometric form that radiates BG3 is applied to a toxic vibrational source, Dr. Karim refers to this as “Geometric Alchemy.”

Transmuting a physical substance into a different physical substance requires a great deal of energy and a high level of mastery; however transmuting the quality of an energetic field from detrimental to beneficial can be easy and virtually instantaneous.

Among the most commonly needed vibrational work today to help people protect themselves against environmental sources of V-G, is to balance the toxic Geopathic Earth Lines and the Electro-Magnetic Fields (EMF) a person is exposed to. Most modern Vibrational methods used against Geopathic lines utilize techniques to try to block, divert, or absorb the toxicity from these Earth lines.

Dr. Karim found that when a strong BG3 source is put on the toxic V-G energy field of a Geopathic line or EMF source, that the Vertical Wave component either greatly diminishes or may become impossible to detect.

The remaining Horizontal Wave of Negative Green which emanates from the Geopathic Line or EMF source then actually becomes a *Carrier Wave* for the BG3 energy quality; the formerly toxic source becomes a carrier to send the BG3 along the entire energy pathway of that source, potentially for great distances!

In my own discussions with Dr. Karim, he mentioned that the disappearance of the Vertical Wave from our testing (after BG3 is applied to the detrimental source) may not be an actual eradication or full transmutation of the Vertical Wave; it may be that the BG3 acts to stop the Vertical Wave (which may still be present) from interacting with and harming the human energy field, which is why we no longer detect it. This is an interesting point for further research; for practical purposes, Dr. Karim's BioGeometry testing has demonstrated repeatedly over multiple decades that the application of BG3 to these toxic energy sources has a strong protective effect on the subtle energy fields of humans and other living beings.

4. RESONANCE, HARMONICS, AND A NEW PHYSICS OF QUALITY

One of Dr. Karim's major contributions has been to add an understanding of Resonance and Harmonics to Physical Radiesthesia. The French Radiesthesiasts wanted their work to be considered an extension of modern Physics, so they kept many of their concepts within the boundaries of modern physical science; their primary energetic paradigm involved the simple linear emission and reception of energy. Dr. Karim has gone much further, creating a broader holistic context for not only Radiesthesia but for all classical Qualitative science methods as well.

One source of inspiration which Dr. Karim often cites for his work is the text *Akroasis* by Hans Kayser, which describes a complete harmonic system applied to design; just as music does not use just one or two combinations of musical notes, so Kayser critiqued the reliance on limited numerical proportions (such as the Golden Proportion) in design. In *Akroasis* (and also in much more technical detail in his *Textbook on Harmonics*) Kayser described the foundation for a complete harmonic design system.

Dr. Karim elaborated the "Law of Similars" from French Radiesthesia into an expanded description of the principle of Resonance, whereby any systems with similar vibrational qualities can exchange energy and information between them. This Resonance between similar Vibrational Qualities is potentially not bounded by space or time, nor to just one plane of existence.

In Dr. Karim's Multi-Dimensional Plane model, he describes how 7 different Planes of Nature manifest in relation to both human and natural design. The full range of Energy Qualities can manifest on each Plane of Nature; they can also potentially exchange energy and information from one plane to another instantaneously, between any systems which have the same energy quality.

This concept manifests for example in the "Higher Harmonic of Gold" energy quality which is one component of the BG3 (Centering Vibration.) A piece of physical Gold held in a person's hand and connected energetically to a Neutral Pendulum (described in the previous course in this series, *The Personal Wavelength*) can detect the same vibration at a higher Plane level, ie can detect the "Higher Harmonic of Gold" through resonance with a piece of Gold on the Physical Plane.

Dr. Karim has not only added a deep understanding of the practical application of Resonance and Harmonics to Radiesthesia, he has also created a new 'Physics of Quality' which clarifies how Quality is the other side of the coin to Quantity: Quantity is measurement restricted to the Physical Plane, whereas Quality is linked to measurement on all Planes and operates through Resonance and Harmonics. It is through Qualitative methods that we can navigate through vibrational interactions on multiple plane levels and thereby create a Master Energy Science.

Dr. Karim's two articles *What is Energy* and *The Physics of Quality* provide the deep foundation for this new Physics of Quality, which is also described in his book *Back to a Future for Mankind*. With this understanding, the qualitative science of classical traditions is restored to its rightful place of equal (if not greater) value alongside modern physical quantitative science.

The Physics of Quality has many practical applications in Dr. Karim's BioGeometry. For example, we described previously how both Turenne and de Belizal followed a basic Physics quantitative wavelength model to describe the Bands in the Vibrational Spectrum; Turenne gave actual lengths of the waves, while de Belizal asserted that Negative Green was the shortest wavelength and thereby the most penetrating.

Dr. Karim has shown in his work how this quantitative model of physical wavelengths cannot account for the actual observed activity of these energy qualities; for example, most (if not all) of the radiations on the Electro-Magnetic Spectrum test as radiating the Vertical Wave of -G, whether that wavelength is extremely long ("Extreme Low-Frequency Waves" such as those in 60 Hz home electrical circuits) or extremely short ("Ultra High-Frequency Waves" in the Ionizing radiation band, such as Gamma Radiation.) So the idea that -G is "the shortest wavelength" does not match the reality that it is found in certain phenomena which range from extremely short to extremely long waves.

Dr. Karim's model of Resonance and Harmonics in the Physics of Quality not only matches the actual observed activity of waves measured by Radiesthesia more accurately than does the physical wavelength model, it also can be applied to practical methods which transform the energy quality from any wave (ie, can make the wave emanate any of the 12 bands in the Vibrational Spectrum which is desired, or emanate the BG3.)

This is described in the BioGeometry Advanced Training in the section on *The Forming Process of Waves*, which explains how waves (including Electro-Magnetic waves) can be "Formed" into particular shapes through adjustment of the proportion of the length of the wave (wavelength) to the height of the wave (amplitude). This literally changes the "shape" of the wave, including its internal angle, resulting in a change of its energy quality from one band to another. This not only has tremendous implications for practical work in potentially transforming our entire modern Electro-Magnetic technology into something which radiates beneficial energy rather than detrimental, it also can be applied to the all types of practical design work.

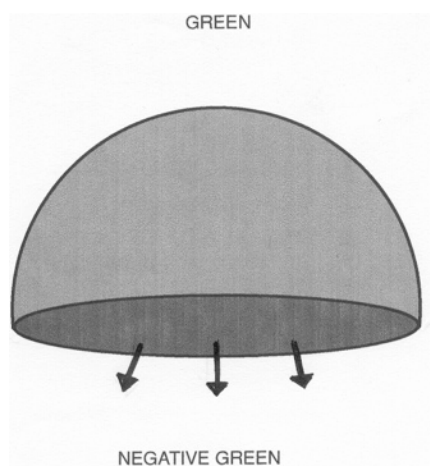

For example, we are "Forming a Wave" of a specific quality every time we construct a room of a given length, and with a given height from the floor to the ceiling. This shows how even our most basic design work, such as the proportions we give a room, creates powerful but invisible waves which can affect the health and consciousness of every living being exposed to it.

5. ADVANCES IN SHAPE-CAUSED WAVE RESEARCH

Through decades of research and empirical testing, Dr. Karim greatly expanded the French discoveries of the Shape-Caused Waves emitted by different Geometric Forms. Dr. Karim demonstrated his mastery of this field at the Egyptian National Research Centre, where he showed that he could affect living beings with the invisible radiations from simple geometric forms; this led to his becoming the leader of a new group at the National Research Centre, devoted to the Study of Geometric Forms on Life Functions.

To give a very simple example of Dr. Karim's research, his background as an Architect led to his rediscovering the secrets to how the classical Sacred Builders Guilds of ancient cultures created optimal energy qualities through geometric design.

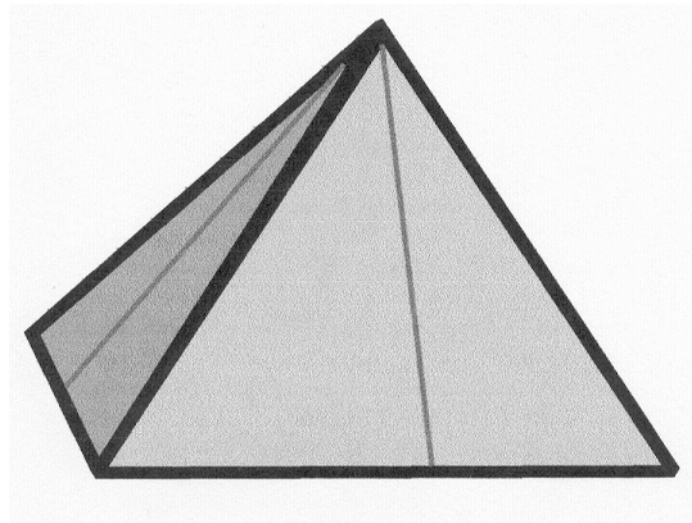

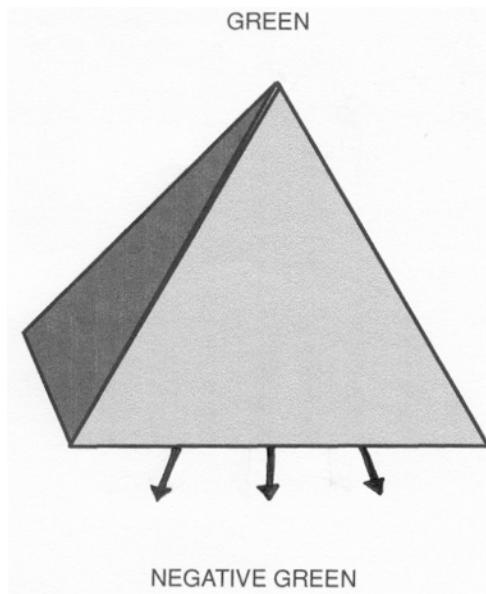

We have seen how Chaumery and de Belizal identified the Negative Green emission from the base of a Hemisphere or Pyramid; Dr. Karim was able through Radiesthesia testing to identify how classical builders were able to keep (and increase) the desirable Horizontal Wave of -G in these forms, while reducing or eliminating the harmful Vertical Wave of -G.

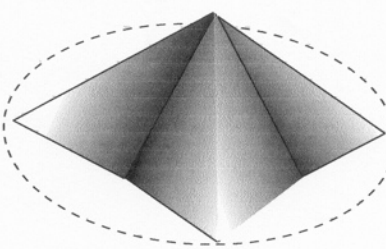

Applied to Sacred Architecture, the Hemisphere becomes the Dome which is built into the design of many Mosques, Churches, Synagogues etc. One method used classically to eliminate the V-G component of the Negative Green generated by the Dome, while retaining the H-G component, was to create a spike or spire at the very top of the dome; often the insignia of a religion was then added to the spike at the top of

the dome. This design optimized the Negative Green needed to connect those in the Temple to higher Spiritual Realms, through the Spiritual Carrier Wave function of the Negative Green Band. Ancient Temple sites were always built on natural Sacred Power Spots, which can be identified by their unusually high intensity of the BG3 at the site; the Temple's energetic design then helped to connect the Sacred Power Spot on the Earth to a Sacred Power Spot in the Sky, with the properly designed building acting as a link between the two and making their beneficial energy available to those in the Temple (these methods are described in more detail in the *BioGeometry Advanced Training*.)

Other vibrational solutions were found by Dr. Karim to have been used in the design of Pyramids, which were also built on Sacred Power Spots for similar reasons.

The Great Pyramid solution was to create a slight indentation straight down all four triangular faces of the pyramid; this not only helped eliminate V-G and enhance the H-G Spiritual Carrier Wave, it also

created BG3 through the creation of a slight 'star' shape to the base of the pyramid (this is linked to the design principle of "Virtual Rotation" which can create BG3, which is taught in the *BioGeometry Foundation Training*.)

BG3 DESIGN

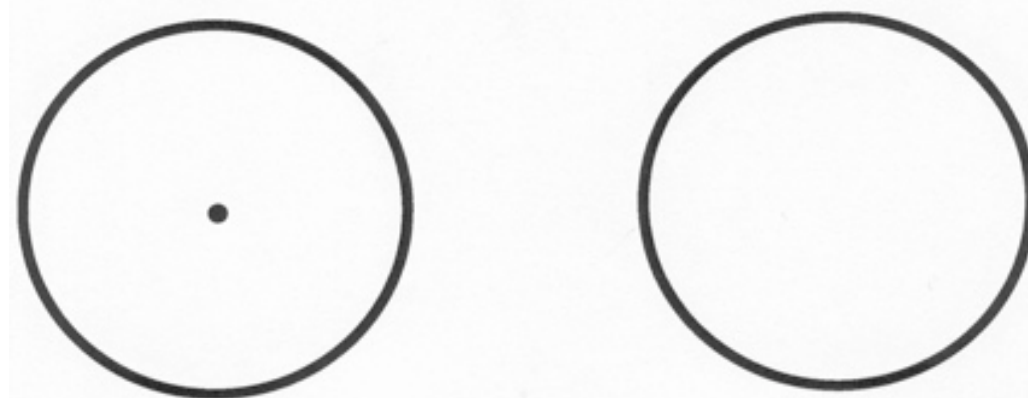

Much of Dr. Karim's Shape-Caused Wave Research is related to his breakthrough discovery of the BG3, the energy quality of the Center. The BG3 energy quality connects all things to the primal source, which emanates from the Center of all things; in Dr. Karim's own words, "The Center is a Transcendental Gateway beyond Space and Time." He has identified a wide range of natural phenomena which create strong BG3 concentrations, and has developed many new techniques to create similar BG3 concentrations through design methods.

All living energy systems are literally "centered", i.e. connected to ultimate balance, through the BG3 energy quality. The BG3 quality is found naturally within the energy centers of the human body and energy field which are known to various spiritual traditions. For example, the BG3 energy quality is found naturally in every Chakra, every Acupuncture Point, every Joint, and in the center of every Cell in the human body. We can also create BG3 radiations from our own energy field through Blessing, Prayer, and other beneficial internal states.

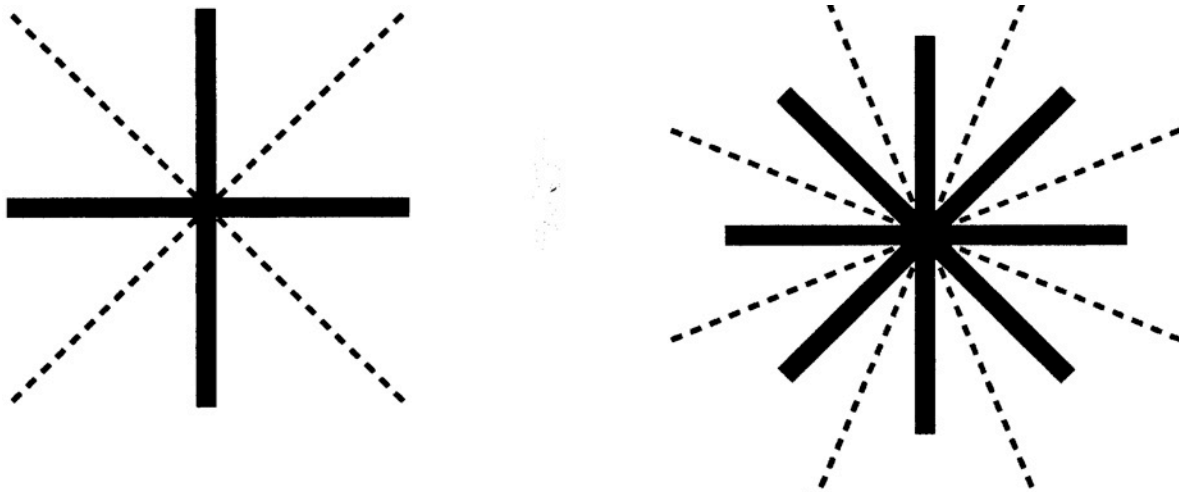

Our natural environment also has BG3 qualities; these are concentrated in areas known to spiritual traditions as "Sacred Power Spots", the major places of power on the Earth. As mentioned previously, it is upon these Sacred Power Spots that classical Temples were always built.

Through human design, we can 'sculpt space' to give it precise energetic qualities. The most important of these energy qualities for Sacred Architecture is the BG3, as it is the primal unpolarized Universal Donor of beneficial energy; the 12 bands of the complete Vibrational Spectrum on the other hand have polarized energy qualities, which means that the vibration of a particular band may be more appropriate for one person than another, as we will see later in our practical methods.

The most basic aspect of BG3 design is that this energy quality manifests in the Center of Shapes; through creating appropriate shapes, we can manifest BG3 in specific locations. BG3 appears in the center of a circle, or in the virtual center of a partial arc. Normally the center is left open (right hand picture) which creates more BG3 than filling in the center (left hand picture); however there are exceptions to this rule, such as the classical use of high quality crystals (particularly Quartz) in the center. The vibrational amplification power of the Quartz can intensify the BG3 rather than suppressing it.

In linear forms, the BG3 manifests in the center of the line movements; this is shown in the left hand picture below as the dotted lines (BG3) appearing in the center of the 90 degree lines of a simple Cross. If we were to then draw in and make physical these BG3 lines of energy at 45 degrees as seen in the right hand picture below, the BG3 invisible radiations would then shift to the new central axis between the physical lines (the new position of the BG3 emanations is shown by the dotted lines in the right hand illustration.)

The above principles are a very simple foundation for BG3 design.

The complete science of BG3 design involves accessing different “Quality Scales” which can potentially manifest any energy quality in the complete Vibrational Spectrum, or manifest the BG3 energy quality of the Center.

Within each of the Quality Scales below, there are particular places within that scale (ie particular number sequences, particular angles, etc.) which can manifest the BG3 and thus be applied in design work:

- * Shapes
- * Sounds
- * Angles
- * Number Sequences
- * Movements
- * Proportions

Because Dr. Karim’s system teaches the methods which nature itself uses to manifest specific energetic functions throughout all creation, BioGeometry is sometimes referred to as “Nature’s Own Design Language”. Because it can create through design the same qualities found in BG3 centers in Nature, BioGeometry is also sometimes referred to as the “Science of Creating Sacred Power Spots.”

6. IMPROVING SAFETY IN RADIESTHESIA

In the previous section we described how Dr. Karim identified the methods used by the ancients to modify geometric forms, in order to remove the toxic components from their Shape-caused Waves. These important design principles were sadly not known to the original French Radiesthesia researchers; if they had been, perhaps Leon Chaumery would not have met his tragic end from V-G overexposure. This is similar to the early researchers in nuclear radiation (such as Madame Curie) being fatally poisoned by invisible rays they did not understand, leading to the later creation of new safety measures in handling radioactive materials.

In addition to geometric modifications which minimize detrimental energy qualities while maximizing beneficial ones, Dr. Karim has also emphasized to his students some classical safety methods and introduced numerous additional protective measures; a few of these are listed below.

MINIMIZING TESTING OF DETRIMENTAL RADIATIONS

When testing sources of strong detrimental vibrations, such as the Vertical Wave of -G found in toxic Geopathic Earth Lines or EMF sources, it is important to only test these toxic energies for a short time to avoid overexposure.

Either one can break up the testing into multiple short sessions, or have a group of people each do part of the testing of a larger project.

SETTING UP OVERLAYS OF BENEFICIAL ENERGIES

The first application of this idea is to wear strong sources of beneficial vibrations on the body, to protect you when testing detrimental energies. Classically, various forms of high quality stones and/or amulets were used. Dr. Karim developed a Medallion covered with beneficial energy patterns known as BioSignatures® for BioGeometry students to wear when testing, as well as other beneficial Geometric forms which radiate BG3 and can be worn on the body.

The second application of this idea is that when testing highly detrimental environmental energies, especially toxic Earth Energy Lines (Geopathic Grids), Dr. Karim recommends putting up a strong BG3 radiating source in the space beforehand in order to damp down the toxicity of the site; in BioGeometry the BG Cube® is used for this purpose (this is available as a part of the BG Home Kit.) Then the highly sensitive Vertical Wave Pendulum can be used to pick up the Vertical Waves through this beneficial vibrational overlay, which reduces the toxicity picked up by the tester.

TESTING BENEFICIAL ENERGIES BEFORE AND AFTER TESTING DETRIMENTAL ENERGIES

Dr. Karim discovered that if one ends a radiesthesia session by testing detrimental vibrations, that a kind of subconscious resonance with those detrimental qualities may remain in the person's energy system. To avoid this, the final testing in any session should be of beneficial qualities, specifically the BG3.

He also found that it was important to start a testing session with testing beneficial qualities (BG3); this sets a subconscious pattern of a person looking for the beneficial in everything they encounter first, before they look for the detrimental aspects.

This resulted in the creation of a very helpful protocol, wherein the very beginning and end of every testing session is focused on testing beneficial qualities (BG3), with the testing of detrimental energies "sandwiched" in the middle of the session.

CLEARING AFTER TESTING DETRIMENTALS

In the earlier section on Enel we discussed his emphasis on basic classical methods of clearing oneself after vibrational testing. Dr. Karim has similarly emphasized various classical methods for keeping one's energy fields clear after testing detrimental energy qualities, including:

- * Full body washing with water, or at minimum washing of the hands, head, and back of the neck.
- * Testing oneself on Anatomy Charts (the "Medical Radiesthesia" described in the *Personal Wavelength* online training) on a regular basis to detect imbalances in one's own energy system as soon as they arise, before they become serious.
- * Regular clearing of energetic tools and energetic jewelry, especially those which are worn to keep one's energy field strong and protected during testing.
- * Making the form of an equilateral cross with one's fingertips over the forehead during testing, which helps keep detrimental energy from entering into the areas in the head which must be clear in order to conduct accurate vibrational testing.

7. SUMMARY OF THE DISCOVERIES OF DR. IBRAHIM KARIM

The complete discoveries of Dr. Karim are detailed in the *BioGeometry* live Foundation and Advanced Trainings; below is a short list of those discoveries most relevant to the topics covered in this online training.

1. **Dr. Karim discovered the “BG3”, the three energy quality components found in the Center (of the Circle and of all forms.)** This Centering Vibration is non-polarized and is connected to the primal unity which exists before the split into polarity and multiplicity. From a higher metaphysical perspective, this is the unified Divine Source of Creation expressed at the Vibrational level; the complete 12-Band Vibrational Spectrum discovered by the French Radiesthiasts contains the polarized energy qualities which manifest everything from that primal unity, with each Band carrying specific powers and creating precise functions in natural systems.
2. **The Vertical and Horizontal Wave Pendulums were created as a superior alternative to the original French tools to detect each of the 12 Bands in the Vibrational Spectrum**, and to differentiate the harmful Vertical Wave from the beneficial Horizontal Wave in each Band.
3. **The BG3 Pendulum was developed to allow easy detection of the BG3**, the Centering Vibration.
4. The BG3 energy quality makes it possible to directly balance living energy systems by connecting them to the energy of the Center, rather than using the polarity balancing method to try to neutralize excesses which harm the system. Similarly it is possible to **transmute the detrimental energy effects from many environmental sources of toxic vibrations into beneficial energy through applying BG3 methods**, rather than just trying to block, deflect, or absorb the toxic vibrations.
5. **A complete “Physics of Quality” was developed**, which provides a richer understanding and practical framework for Radiesthesia than the earlier French concepts of the “Law of Similars” and simple linear energy effects. This Physics of Quality provides a clear context for classical and modern systems of vibrational healing and balancing, restoring Vibrational and Qualitative methods to their true place of significance and dignity alongside modern physical Quantitative methods.
6. **Advances in understanding the Shape-Caused Wave** led to new practical design methods which create precise energetic effects. Nature herself uses this system of energetic design, leading to Dr. Karim’s BioGeometry system being sometimes referred to as “Nature’s Own Design Language.”

7. **Unsafe methods used in the French research were eliminated** (such as using strong V-G emitters such as stacked hemispheres). Safe protocols for energetic testing and balancing were developed.
