

THE ATLANTIS SYMBOL

by Christopher Freeland | Nov 28, 2016,

Revised Aug 5, 2018

**(REVISED AND ADDED RESEARCH BY JESSE “SOLOMON SANCTUS
GERMANUS SKYWALKER” ALEXANDER)**

(Original Symbol)

(Image experimentation and research by Jesse Lee Alexander)

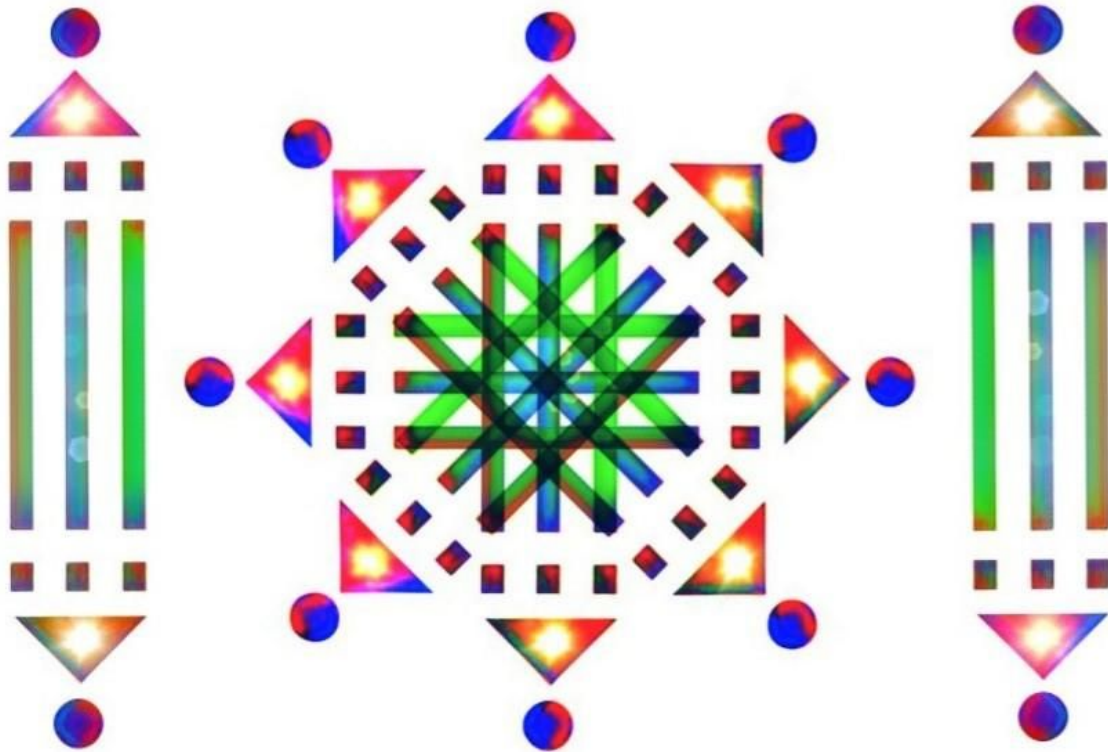

Image of the Atlantis symbol superimposed over each other
Forming a new geometric symbol that is 8 sided like the great
Pyramid.

"This is the image that I have superimposed over each other I have a feeling that this may be the key to the (Monad) as I have been finding that you can create all letters and numbers with the symbol intertwined like this" - Jesse Alexander aka Solomon Telos Skywalker
Also in my research I have been able to convert the image to binary code:

The Key To The Matrix

[illegible]

From here I was able to take the code and then convert the Binary to sound which sounds much like static electricity and have converted it to the 369 HZ Frequency as Nikola Tesla famously said — ***'If you want to find the secrets of the universe, think in terms of energy, frequency, and vibration.'*** This however is not the end of my research and I will be attempting other feats of science using this pattern.

(THE 369 HZ BINARY CODE SOUND)

I believe this to be the primordial sound or vibration that brought all into existence.

THE ATLANTIS SYMBOL

(by Christopher Freeland)

The Atlantis symbol is probably the world's oldest "magical" geometric form to have reached our modern age and a very powerful one too. Powerful in what it can achieve as regards protection of a quite specific kind, but it is only effective if the exact design specifications are met, otherwise it serves little or no purpose. Great attention must be given to the geometry and proportion.

We know nothing about its origins, so theories and rumors abound!

The first time the symbol appeared recently in the public eye, or at least its reputation, was following the excavation of Tutankhamun's tomb in 1922.

The two men responsible for the discovery of the site were English – remember Egypt was occupied by the British from 1882 until 1958. Digging for treasure hunting was all the rage in Egypt for many years and concessions were granted to keep a semblance of order in the frenzied activity which can be readily compared to a gold rush. The successful collaboration of Howard Carter and Lord Carnarvon started in 1909. Carter was by then an accomplished Egyptologist and active trader in Egyptian artifacts while Carnarvon needed an expert for his financial ventures in archeology and tomb-raiding. After seven years of mixed fortunes in the Valley of the Kings, when Carnarvon was about to throw in the towel, Carter found the entrance to a tomb, and what a find!

A few months after the discovery, Lord Carnarvon died. His death in April 1923 was closely related to his presence in Egypt where he had gone on doctor's advice to stay in a dry climate following a car-racing accident when he had seriously damaged his lungs. He died of pneumonia following a blood infection after he had nicked a mosquito bite whilst shaving. Not quite the type of news that makes headlines.

Almost immediately, the rumor, and it was nothing more than that, created by an obscure novelist, Marie Corelli, and fuelled by sensation-hungry journalists, made the rounds of the European salons. Impossible to prove one way or another, but shrouded in mystery which is easy to feed, word was out about a curse attached to the violators of Tutankhamen's resting place. One claim even had nineteen people die in an unexplained, painful and premature manner, including Lord Carnarvon's dog. In actual fact, the only person who died shortly after the uncovering of the tomb was Lord Carnarvon, the expedition's sponsor.

Perhaps to explain why Carter was spared, a convenient pretext was found in the Atlantis ring. It is said that Carter owned an Atlantis ring which protected him from the dreadful effects of the curse. There is no evidence, let alone photos of him from that period – or any other, wearing a stone ring. As he was a trader in artifacts and even at the origin of that line of business, it is not unreasonable to imagine that he may have possessed such a ring, but no one knows of its whereabouts, let alone its provenance.

The hyperbole one can read on the internet about the fantastic properties of the Atlantis symbol is perhaps in proportion to the rumor of the curse.

In the course of my studies into dowsing and invisible energy forces, it was a natural step to read and research the French contribution to radiesthesia which was immense. One of the better-known protagonists is André de Belizal, mainly due to his inventions and discoveries.

A little digression into history is necessary here to put the story into perspective. In 1804, Napoleon invaded Egypt to upset British trade routes and being a smart fellow he combined a little pleasure with business and took 167 men of science along on the trip. One of these savants was the Marquis d'Agrain. Quite what his role was is unknown but given what transpired, he was probably an archeologist or surveyor. Egyptology had not yet been developed as a department of learning and Napoleon stayed close to the Mediterranean coast, so the stories about rings being discovered by Egyptologists or in the region of Luxor (in the far south) cannot be seriously entertained. This was the time when the Rosetta Stone was found along with a large number of artifacts – most of which ended up in British museums after the Royal Navy relieved the French of their loot when shipping it back to France.

All this to say that André de Belizal had a sandstone ring with the Atlantis symbol engraved on it which he kept in a drawer of his desk. It got there because he was married to the great-granddaughter of the Marquis d'Agrain. This means it is highly improbable that it was the same ring as Carter's, given that de Belizal's ring had been a family heirloom since the early nineteenth century and was still with the family until the 1960s when it was photographed and used as an illustration in a book, "Ces Maisons qui tuent" (Houses that kill) by Roger de Lafforest, an author, and amateur occultist.

Because de Belizal and Chaumery's work was totally pioneering, they had absolutely no notion of the dangers involved. Somewhat like the technicians and engineers working on radar and radio-telecommunications in the 1930s and 40s, the risks were unknown and many paid with their lives, unsung victims of a deadly dangerous but potentially useful technology. The world is manifest due to frequency and although we play with quite a number of them, we are blissfully ignorant of their interaction. When you start playing with energy, surprises are guaranteed.

Chaumery died in 1957 at the age of 77. According to de Belizal the cause was dehydration which he believed was due to them both being subjected to a specific frequency generated by the hemispheric forms they were experimenting with. That same frequency is also created on the south-central wall of Cheops pyramid, as well as inside the structure itself. The question immediately arises, why Chaumery and not de Belizal?

This is where our reputedly rational thinking is put to a severe test. We recognize that we are in territory unexplored, but we insist on an explanation. The desire to understand is natural in a human, unfortunately so is arrogance. Almost all "human" discoveries have been accidents but we soon forget that all-important detail. What is very alarming is our tendency to persist with stuff that we know is bad for us. Immediately comes to mind a series of inventions of the last two hundred years: artificial fertilizers, even though the inventor (Liebig) four years later said he was wrong in his assumptions; tobacco additives; Chernobyl (child's play) and now Fukushima (serious problem); artificial food additives that makes us addicted to a brand via the substance; mobile telephony, etc., etc.. The genie is promotional advertising and we fall for it every time.

The good stuff is kept under wraps until such time that someone finds a lucrative way to commercialize it, no matter the consequences for humanity or Nature. Form-generated energy is just such an instance.

The most recent form of weaponry is the high-energy end of this domain, the ability to make buildings, vehicles, individuals out with a beam of directed energy. That is no longer the subject of sci-fi. It is here and now, probably even the demolition of seven buildings with two planes a few years ago was an example of that technology.

The low-energy end of the spectrum is what interests us here and the Atlantis symbol, when designed to specific proportions, is the perfect example of the unsuspected capacities of form. It would be so comforting to our mindset if a harmful frequency which dehydrates can be offset. Nature specializes in the interaction of opposites, anyone who observes her knows that. There is no exception here. One "bad" frequency can perhaps be transformed into a vibration which is beneficial. The terms coined by de Belizal and his colleagues to define these frequencies correspond to colors in three different phases: electric, magnetic and electromagnetic but that is another story.

Continuing their research in my own modest manner what I have found to explain the physics looks like this:

The combination of the geometric patterns and forms making up the Atlantis symbol seem to have a harmonizing capacity as if they balance frequencies in the immediate vicinity. Affecting a range of energetic forces in the magnetic and electromagnetic diapason, including the telluric and cosmic energies impacting the human, so biomagnetic and bioelectromagnetic might be more accurate. The effective radius is approximately 2.25 meters. It has no apparent direct influence on the electric field, although the magnetic influence will have some bearing at a certain stage. Because of its restricted range, it cannot act as a shield against cosmic forces from the sun and universe, nor cosmic or tropospheric EMF or radiation.

This fact of balancing within a restricted area would imply it can be used as a protection against energetic forces, both of known and unknown influences and as a result act as a defense, protecting the wearer from the energy of a magnetic and electromagnetic nature. Given that thought is an electromagnetic frequency, that is perhaps the reason why it was considered especially useful against the harmful intentions of other humans, providing protection of a psychic and mental nature.

In conclusion, thanks to its special combination of form, proportion, alignment and pattern the symbol functions on a permanent basis, 24 hours a day just so long as the geometry is observed. Obviously, there are conditions when this effect is nullified, as happens everywhere in Nature as a result of major cosmic events, solar flares, coronal mass ejections, etc.. The symbol has a beneficial impact on and enhances the biomagnetic field of the wearer.

When placed in a horizontal plane, the Atlantis pattern projects a negative magnetic polarity in the axis of the centreline for a distance of 60 cm or so in both directions, that distance depends on the energetic makeup of the immediate environment. The geometric forms are essential in creating the polarized field, with each component of the pattern playing its role. The proportion of the pattern in relation to the overall field is of great importance, to the extent that if it is not respected, it serves no purpose at all.

In a circular plane – the ring – the central point of the three parallel lines is neutral with the outside edge of the ring producing a positive magnetic polarity. The groove connecting the two holes on the inside of the ring ensures the complete loop of the magnetic circuit. The ring does not generate vital force but conveys it on the magnetic phase of the field created by the ring. In the domain where hexes or curses are common coinage, this pattern is of great value. That was the start of my research into the capacities of the ring and it proved to be totally efficient in fending off attacks from what I can only call, for lack of adequate understanding and vocabulary, determined demonic beings on several occasions, on others and myself.

Having experimented with the ring and various media on which the symbol is engraved, I have accessed silver-workers and leather artisans who prepare their products with the greatest of attention and care to the proportions. The rings, leather belts and ribands sold on the site have all been rigorously prepared and manufactured.
