

ONDOMETER

(by Servranx Brothers)

Here is a chart that was designed to easily determine the position of the best activity (the fundamental ray) of objects.

In addition to its intrinsic capabilities, this chart was provided with some technical detail that bring some comfort to the work of the operators: the six concentric circles serve to amplify the radiation of the objects being tested.

Fundamental Ray Search

In radiesthesia surveys and actions, it is common to use fundamental ray for best results. This graph is particularly suitable for finding this ray. First, place the 360 degrees marker on the magnetic north axis (use a compass). Place the witness in the center of the concentric circles. Ask mentally, while you hold the pendulum on the center of the graph: "What is the angle of the fundamental ray of the witness?" The answer will be found in the outer circle (between 0 and 360 degrees).

Find out more about the fundamental ray in dowsing, including the work of Mermet abbot.
