HOW RADIESTHESIA CAN HELP YOU

There are many facets of thought and deed that will in their own way help the individual in the right direction along the path of life. There are also—conversely—so many philosophies and cults that we tend to become confused, as very few of these appear to aim at producing harmony within the self, whilst, at the same time, bringing about a readjustment of the “outer” self. However, it may be said that the Science of Radiesthesia is in the unique position of doing just that. And in order that you may clearly understand what is meant by this, a brief resumé of the historic and scientific background of Radiesthesia is given here.

Radiesthesia, basically, is the Science of the Pendulum—its uses and deviations when used by the individual. The Pendulum was used over 5,000 years ago by the ancient Races of China, Japan and Egypt. Records show that it may even have been used before that time. But it was not until the advent of the Industrial Age, and later, the Scientific Age, that new inventions and thought brought about a drastic review in the work of the pendulum. In France, famous Abbés experimented, and published works dealing with the phenomena connected with this science. Later—with the arrival of the Space Age—we have come to the realisation that there are literally no limits to the use of the Pendulum.

This might appear at first to be an exaggerated claim—to say that there are no limits to the use of the Pendulum, but with the knowledge that is within our grasp today . . . knowledge of the mind . . . of the higher spiritual self . . . and of the great universe around us—nothing is impossible. And if we care to look ahead a few years, then—quite literally—again, nothing will be impossible. We have only to look back over the past sixty-five years to realise what a stupendous revolution has taken place in human life and in scientific achievement. During this time more has been done to educate Man than has ever been done before. He has left behind his ignorance and has moved forward to study and comprehend the implications and the complications of science. Only 100 years ago, for instance,

if anyone had predicted that a car could be driven hundreds of miles in the course of a day, or that radios or T.V. sets could be switched on and off by the turn of a knob, he would have been laughed or jeered at. It might even have been termed "heresy" to have predicted such utter nonsense! Yes, this last sixty-five years HAS moved swiftly, but I predict that the next sixty-five will move even quicker still, and I would dearly love to see the world in, say, 200 years time. It will be—I feel sure—completely unrecognisable.

Close on the heels of this amazing revolution, the subject of Radiesthesia and its brother, Radionics, has moved quietly into the homes of millions, and the subject has gradually gained ground, although it was at first thought to belong to the "occult". I imagine that many people have heard of the word "Radiesthesia", but that they do not know what it means. It is, in fact, a true Science, affected by the scientific laws of the world we live in. The term "occult" in this connection is obviously incorrect, and the best term to use is "metaphysics", which is man's understanding of the higher self and the Cosmic forces round him. The dictionary defines it as: "the study of the ultimate problems and principles behind all being and knowledge." Radiesthesia may belong to the sphere of "Metaphysics" but never to the so-called "occult". Those who seek to dabble in the occult should do so with great caution, for wisdom, sincerity and unselfish seeking are necessary attributes in this respect.

Anyone can use the pendulum, as applied to Radiesthesia—in fact, the very term "Radiesthesia" ("the detection of radiations") makes every one of us a potential pendulum operator if we care to experiment. Some may be better at it than others. But we are only using a medium of detection, for want of some other more advanced object. However, is there any object more advanced than MAN on this planet Earth? Within the Universe—possibly, yes! Here on Earth, we use science as we discover it. The pendulum, then, is a method of radiation detection, or measurement or observation—to whichever use we may care to put it. As I have stated before, the Self is a complete and perfect Universe. It is continually emitting all kinds of radiation, and at the same time, it is also attracting many types of radiation, and the pendulum is a very effective medium which can enable us to sort out one radiation from another.

What the Pendulum can do for you

Having already stated that the pendulum is an instrument of radiation detection, the reader may think that it begins and ends just there. But just how wrong can you be? The operation of the pendulum will gain you a greater degree of sensitivity to exterior radiation, even when you are not actually using it. It will bring the intuition to a higher degree of accuracy, and it will also help you to have a better understanding of your whole life and aims.

For over twenty years I have used the pendulum, with and without allied instruments, and I have found that it is a well of knowledge that has no bottom. There is always something new and exciting around the corner every time we use Radiesthesia.

It will get you out of any rut and bring to you a new light of understanding that you never dreamt existed. Although the pendulum has been used for very many purposes, why has it been used by over 70 per cent of all operators to help in the understanding and cure of disease? Especially at this time in our history, when the world is so full of illness caused by synthetic foods, poison sprays, and many other horrors of "modern" living, why is it that Radiesthesia, together with Radionics, has a far better percentage of alleviation and prevention of illness than any other form of medicine? The fact of the matter is that Radiesthesia is a personal and highly developed science, which, contrary to expectations, is not hard to learn, and anyone with average intelligence can use it in his or her chosen field of research.

And now to proceed to the practical part of the subject. Nothing can be proved until you start to USE the pendulum. Therefore the first thing we must have in our possession is a good pendulum, and this can be easily purchased. These specially made pendulums are quite the best for the job, but temporary pendulums may be made out of any weight with a suspension thread . . . for instance, a plumb-bob, a fishing weight, or a small cotton reel on a thin piece of cotton is all that is required, together, of course, with the "know-how" and yourself as the interpreter of this universal language. Now that you have a pendulum, it is desirable to test its sensitivity in your hands. The photograph* shows the RIGHT way to hold a pendulum, and that is between the forefinger and thumb of the right or left hand, whichever is most used. The suspension thread should be about 4-5 inches long, and no longer, otherwise pendulum movement will be too slow.

To discover if the pendulum will move for you, suspend it over the free hand, palm upwards. If you are right-handed and a male, you will obtain a clockwise gyration of the pendulum a few times. If you are right-handed and a female, then it will swing or rotate anti-clockwise, depending on personal polarity (a subject we will go into at a later stage in this series). Assuming that you get a movement, this suggests that you will be a poor, good or very good operator—according to the results of further tests. DO NOT try to stop all movement of the pendulum by thought or by muscular control; let the mind think freely, and let the pendulum do what it will. Just watch the results.

Next, get a pen or pencil, and lay it crossways to the body in front of you on a table. Suspend the pendulum over one end first (any end) at about 1 inch from the object, and very soon you will find that it will move either clockwise or anti-clockwise, depending on which end (polarity speaking) you are working; then move the

pendulum to the other end, and try again. You will notice that it will move in the opposite direction, thus indicating opposing polarity. Then try holding the pendulum in the centre of the pen or pencil and the pendulum will swing along the length of the object tested . . . indicating a neutral position. Thus we have three distinct pendulum movements (there are about 50 altogether, if one wishes to go into the subject deeply, but for most work, the three movements will suffice). The problem now is—which movement indicates what, and why?

Of course, in a series of articles like this, it is not possible to delve into the deeper channels of Radiesthesia, so we will pursue the elementary principles behind the science. There are, however, study courses that deal fully with the subject.*

The main reason why I mentioned the fact that you must not influence the pendulum by thought is merely to cancel out your own initial suggestion, which most probably would be: "But I can move it by thinking about the movement." So you CAN, but this is not what is required. You may also say: "But I can move it with my hand." Of course you can, and this again you cannot stop. However, what you need to do from the outset is to train the mind and the higher self to channel information and not bar it by self examination and criticism.

Thus, we assume that in this first exercise you have obtained a good pendulum movement, which will quite obviously get better with continued practice. Remember you are NOT dealing with so-called occult forces. You are dealing with natural phenomena, which will bring with it nothing but good, for it will help to tune the higher mind and give you something new to do. At the same time, it will open up a new sphere of understanding of the Self.

In the next article of this series we will do further tests, and examine the reasons why we do these and what is the object of these articles. In the meantime, if you would like any information on the subject at any time, please write to your Editor, who will be pleased to reply.

(*A free Prospectus of courses for home study is available from the Editor)

"The psychological assessment of the individual is only a very small part of the whole, for psychology has never yet decided who is the norm to start with, in order to find a basis for assessing the abnormal. Psychologists persist in trying to help those whom they think abnormal, when in fact those persons may be quite normal. It appears that the mind of the psychologist can see nothing but the normal or abnormal, which reminds me of something I read in a newspaper recently: Two psychologists were talking. One was saying: 'What do we do when we find a normal man?' The other said: 'Treat him, of course.'

B.C.

HOW RADIESTHESIA CAN HELP YOU (2)

The study of the Pendulum is both fascinating and rewarding. It will bring you into little-known spheres of knowledge. It also cancels out the restricted idea that we cannot extend ourselves "further than we can touch", and it brings reality to any form of speculation. Let me say at an early stage in this series, that Radiesthesia (the use of the Pendulum) has nothing whatever to do with Spiritualism, Occultism or Astrology. It is a complete science on its own. The Pendulum is used in many scientific circles, and by people in many walks of life. Thus it will be realised that although "scientific" in its approach, it can also be used satisfactorily by the novice.

We must look at the Pendulum not merely as a piece of "some-sort-of-substance" on the end of a string, but as a method of measurement or even as an extension of the higher self—which, in actual fact, it is. The well-balanced Pendulum will react at once to any possible result accruing from experiments . . . and provided you know the basic rules, it will give you good service.

To continue with the subject of experiments (as outlined in my previous article), you will find that the more you DO experiment, the better will be the final results. One of the main factors to be taken into consideration before proceeding further, is the subject of personal polarity. This is really a lengthy study, but we will touch on it here because it is important to know what your own polarity is, and WHY it is.

Polarity of Man

"Polarity" is a term used by scientists to explain the attraction and repulsion properties of magnetic fields—be they artificial or natural. It is a phenomena stemming from electrical, radio-active or frictional action, and has two poles—Positive and Negative. This phenomena extends throughout the whole universe, and by the use of instruments of many kinds, is detected in all living—and so-called "non-living"—things.

As with the rest of the universe, Man (i.e. Man and Woman) has his own polarity, which involves the whole man and each separate organ or part of him. Now, if we were just simply Male or Female, there would be no problem, but we are not. Everyone is part male and part female, and the degree varies with each individual and has little or no bearing on sexual matters. This phenomena (fully explained in some of my Courses and in a now out-of-print booklet of mine entitled: "The Sexual Balance Problem in Humanity") shows how complicated the problem can be, but in this series we are only concerned with polarity in respect to right or wrong Pendulum results.

Generally speaking, all Males are right-hand positive and left-hand negative; all Females are vice versa. However, this may not always be so, because of the inequality of the polarity property in us, and also because of possible interference patterns. If, when using the Pendulum, you get the movements of Clockwise=Male (right-hand) or Anti-clockwise=Female (right-hand) then you have no problem, but for those of my readers who may be confused by erratic results, may I say that you are not alone in this. Many may obtain the reverse reactions of the Pendulum, as stated above. The cause of alteration in polarity is mostly because of illness, which upsets the body patterns, or it can be due to sexual balance within the self. The main thing is to establish a recognisable pattern of action of the Pendulum before going any further.

To the serious Radiesthesist there are about 50 different types of Pendulum movement, but the beginner need not concern him or herself with these. The main three movements are: Positive, Negative and Neutral. Once you have established these, then you will obtain good results—given the time and necessary experience.

In order to establish your personal approach to the possible polarity, it would be wise to obtain the following: A piece of RED paper or coloured material (it must be *true* Red) and also a piece of BLUE material (*deep blue*, if possible); then a battery—any torch battery will do—and a pencil.

First of all, place the battery upright on a clean surface, free from encumbrances. If you can use a transistor radio battery this is better still, for this is marked with the symbols + for positive, and — for negative. Suspend the Pendulum over the whole battery as explained in my earlier article. As soon as the Pendulum begins to move, shift the hand slightly in order that the Pendulum is swinging freely over one terminal of the battery. Watch the movement carefully, and when it has settled down, shift the hand again so that the Pendulum bob swings freely over the opposite terminal of the battery, and note ultimate results. If you are a Male, the chances are that you will have obtained a clockwise rotation of the Pendulum over the symbol + and anti-clockwise over the symbol —. However, if you are a Female, then you should have obtained an anti-clockwise movement over the symbol +, and a clockwise motion over the symbol —. Thus, all movements over the + symbol are to be regarded as reflecting Positive radiations, and those over the symbol —, as Negative radiations. Note this well—for further reference.

The next thing to do is to get the coloured pieces of material and place them on a clean sheet of paper in front of you—Red to the right and Blue to the left. Suspend the Pendulum over each in turn. You should obtain the Positive movement over the Red piece and the Negative movement over the Blue piece. But hold the Pendulum BETWEEN the two pieces of material, and, in normal circumstances, you will obtain a swinging Pendulum, attracted in turn by each colour for a few swings. This is neutral, but if you keep the Pendulum in this position too long, you will tend to pick up the rays of union (see later

articles in this series). It is essential that at all times the Pendulum should move freely of its own accord in order to obtain the best results.

Now we come to the pencil. With the knowledge you now have, repeat the experiment given in Paragraph 11 of my earlier article. Using the same pencil, do you still get the same results? If so, then you are on the right road. If not, I wonder if you are standing in the same position and facing the same way as you were before?

Remember that you are dealing with all types of radiation all the time; the Pendulum merely measures the intensity of this radiation. After doing some experiments with the Pendulum, you might ask: "What can I use it for?"

The Pendulum on its own, or in conjunction with instruments may be used as an adjunct to many progressions or unusual jobs. For instance . . . suppose you have a broken water-pipe in your garden, and you want to find the break. Normally, you would have to get a Water Board man to find the break with his "stethoscope", or you might have to dig up a lot of your garden. In either event, you would incur trouble or expense, but by using the Pendulum you can do the job without any bother at all. Remember the law of Positive and Negative? Then you will apply it here. The break will make it appear as though the pipe were in two separate pieces instead of one. Taking your Pendulum, start from one known end of the pipe and hold the Pendulum over it; then let the Pendulum lead you along the path of its swing, out into the garden, and when you reach the broken part of the pipe—Lo and Behold!—the Pendulum will rotate at once. Go past the break and swinging will occur again. Therefore, it only takes two minutes or so to discover the break, and you will thus save yourself many hours of wasted time trying to find it by other means. Not only can you find this broken pipe on site, but in a later article, I will show you how you may find it in the comfort of your own living-room, with the aid of charts—a facet of Pendulum detection called Tele-Radiesthesia, or prospection at a distance.

Do not just complete *one* experiment and then put the Pendulum down. Repeat your experiments many times in order to obtain the best results. If you make errors, find out why. Did you sit or stand in the same position as you did when you got the experiment right? Did you use the same table or face the same way? We can find out more by searching for the reasons for errors than we can when things go right.

Radiesthesia—no matter in what field you may use it—will cut time and effort, giving you factual results. There are a series of personal Home Study Courses which can guide you right from the start, and if you are interested I shall be pleased to send you details on receipt of a stamped addressed envelope. I have been doing this work for about twenty years. They have been rewarding years, and I am still learning. You, too, will find that life can be better than you think! It is not full of cobwebs and dark corners; it will reveal to you the Light and give you something worthwhile to search for. At the same time, it will bring to you fascinating aspects of knowledge.

HOW RADIESTHESIA CAN HELP YOU (3)

As a result of my two previous articles on Radiesthesia, it has become apparent that the practical aspect of the Pendulum is not often realised. Many say that the literature on the subject is not readily available, but in actual fact, there are publications in several languages on the subject. In Belgium, for instance, there is the well-known magazine, "La Radiesthesie Pour Tous", published each month in French, which contains many interesting and practical instructions dealing with Radiesthesia. In Germany, there is a publication called "Zeitschrift für Radiesthesie", and there are also Italian publications and groups for the study of the Pendulum. The scope of the subject is so enormous that it is in no way possible to mention it all in a brief series of articles. However, personal study Courses on Medical, General and Geological work in this field are available, and there are also tape recordings on a series in Criminal Detection by Radiesthesia, Agricultural Radiesthesia, Computerised Radiesthesia, etc.

A reporter once said to me: "Do you feel different from anyone else when you use Radiesthesia?" Why should we be different? We all possess the ability to do this work. There is no special power required, but what IS required is the capacity to observe, to investigate and to be patient. If, when practising, you make mistakes, learn from these errors, continuing your studies and investigations. Don't be put off, and you will have a hobby or a profession that will become increasingly absorbing—lasting all your life—and one which can be used in any circumstance you care to name.

It may be used to find the leak in an underground pipe or a break in an electric cable; to find those items which may be lost in the house; to trace lost pets or persons (although a special technique is employed for the latter). Other uses include the selection of fertilisers for plants and flowers; to find the right ailment or remedy for it, or to find that lost "gold mine" that may be at the bottom of the garden! I know of a perfumer who uses radiesthetic procedures to help him select and test the ingredients of cosmetics and perfumes. In recent years it has been used in conjunction with Colour Healing, and also in the selection of staff for offices and in business life generally. These are just a few of its many uses.

The Pendulum

Of course the most essential piece of equipment required in Radiesthesia is THE PENDULUM, and it is important (as in any work) to obtain the *very best* Pendulum, otherwise errors can occur. Pendulums are many and varied, and often they are specially designed

to do a particular job. In this connection we find circular, tubular, hollow and "fancy" Pendulums. It is believed by some that the odd wedding ring on a bit of string, or even things like a fishing weight, can be used just as satisfactorily as the orthodox Pendulum. but this is not so, for size, shape and weight must all be taken carefully into consideration when choosing a good Pendulum. The one illustrated in my first article is the most commonly used for general work. It is light-weight, evenly-balanced and gathers the light spectrum to activate it—thus increasing its sensitivity. To the beginner, this problem of size or shape may have no great significance, but now, having progressed so far in this series, we will continue to elucidate the many phenomena connected with objects and people, from which you will learn that by having the right Pendulum for the job, time and error will be saved.

Since everything, animate or inanimate, is made up of atoms (protons, electrons, etc.) there is, therefore, constant motion. In ourselves we see this movement. In inanimate objects, we see the effect of these atomic movements, as, for instance, in a magnet.

Place a coin on a table and hold the Pendulum above it. You will find that the Pendulum will give a number of turns. Then change the direction and it will beat (oscillate) in a given direction. In Radiesthesia, this direction is called the F.R. (Fundamental Ray), by which things can be identified. First of all count the number of turns of the Pendulum before it changes to a swing; then stop. Drop the coin on a hard floor and leave it there. Now test the coin with the Pendulum. You will not only find the number of turns of the Pendulum different, but the F.R. will be different also. Pick the coin up and put it on the table, and on further experiment, similar results will occur. You will also find that the coin will have a distinctive "polarity". You can do this simple experiment with anything—cloth, metal, plastics, "you name it"—the results will always be the same. Don't just take my word for it—try it yourself. For no-one else can prove these things to YOUR satisfaction; only YOU can prove them for yourself.

Another phenomena which often causes students to make mistakes is that of resonance. Briefly, this phenomena is caused by radiation from an animate or inanimate object under examination being absorbed by the site on which it is situated, e.g.:

Let us take the old familiar coin. Place it this time on a new piece of white writing-paper, and suspend the Pendulum above it. You will obtain a positive movement of the Pendulum for a short while, until the serial figure (see later articles about the phenomena of Series) is reached. Next, move the Pendulum away, and place the coin somewhere else on the paper. Then hold the Pendulum over the site where the coin USED TO BE. You should now obtain the same movement as if the coin was still there. However, if you place your hand between the Pendulum and the paper, you will find the phenomena will have disappeared. The same thing will happen if you simply point at the old site of the coin. The reason we have moved the coin to another part of the paper is given below.

Hold the Pendulum once more over the old site of the coin and it will give a positive movement. Then, after a few turns, it will swing in the direction of the actual coin itself. Still holding the Pendulum, if you now move the hand towards the coin, it will swing stronger and stronger, until you are again right over the coin, when the positive movement will recur. This is the basic principle behind the tracing of missing objects and persons, but with regard to the latter, the exercise is rather more complicated.

What happens is this. When the coin is put on the new paper, the radiations connected with the metal impregnate the paper, which will remain impregnated for some time after the removal of the coin. The length of time that the phenomena lasts will depend a great deal on the size of the metal object and the duration of time it has been there. The fact that we can by a simple exercise eliminate the "image", as we call it, proves that it is only an "image" of resonance. The "image" can be eliminated temporarily by the pointed finger, or by a pencil or similar object, but it will still be present if the point is taken away. A Pendulum with a point will remove the "image" all the while it is working on the site, hence the convenience of a point on many Pendulums to-day. In this instance, the resonance may be entirely eliminated by brushing the paper with a magnet, but if the coin has been on site for more than a week, the paper will not give up its resonance.

From this simple exercise we find we can branch out into the discussion of other related phenomena, many of which will be explained in future articles on the subject. The phenomena already discussed must be taken into account when searching for missing objects, but there are occasions when the "image" tends to move, due to the rotation of the Sun. This is particularly so in the finding of Gold, where there are eleven related "images", which are only on the one site at mid-day, sunrise or sunset. But this is getting us into "deeper waters", so I will leave you with this simple experiment to try out a few times. My Course on Radiesthesia (which I know has interested many readers) gives a fuller and more comprehensive explanation of these experiments.

Remember that you are working on a very real world of subtle radiation. The Pendulum is but an extension of the self, and used wisely, it can give you lots of information unobtainable by other methods. Do not abuse it, and you will obtain good results, which will prove to you the reality of the unseen world of radiations, whether you just use the Pendulum with charts, or whether you employ the Radionic instruments, with their more precise detail, and which have brought the subject to a fine art.

If, in the study of this fascinating subject, the reader has any problems—either connected with the articles themselves or the experiments set forth therein—the Editor will be very pleased to assist in any way he can.

HOW RADIESTHESIA CAN HELP YOU (4)

In my previous article, I discussed the problem of resonance—that is to say, the phenomena of a radiational pattern being left behind after the object has been moved. This phenomena is responsible for many a treasure hunter's failure to locate the hidden treasure. It is well known that the phenomena of resonance lasts for a considerable time after the object has been moved, especially so when the object has lain in one position for many years. Thus, it is possible to make use of the phenomena at times.

Some years ago I was loaned some ancient Egyptian figurines. These are small images or replicas of the persons with whom they were buried some two to five thousand years ago. Many of these small figures have been found in the pyramids and graves of the Ancient Egyptians, and it is reasonable to suppose that they have been in the same position until found this century.

I am not very happy about handling ancient objects such as these, since the aura is distinctly felt, and often brings adverse conditions to the handler. These three figurines were no exception. Not only was it possible with the aid of the pendulum to trace their exact location (i.e. the location where they has been originally buried). but also to gain some knowledge of the persons of whom they had been replicas. The Professor of Egyptology who loaned them to me was so amazed at the accuracy of the pendulum, that he destroyed the images at once. By the use of the pendulum, I was able to discover the location of each of the sites which were within a few feet of the originals. I also found out other things, such as the age at death, what the subject died of, any illnesses during lifetime, sex, and much else. The evidence of these things lasts for thousands of years—even for ever. Now one of these figurines (which was offered to me some years later) had been in a fire and—as a result—was “purified”, thus making it impossible to trace its last position or anything else about it.

From the foregoing, we may see that the natural phenomena which may upset the calculations of the treasure hunter may, conversely, aid the researcher. The whole of the research outlined above was done with the aid of the pendulum only, and by studying what we refer to as the phenomena of “series”—coined by the late Henri de France about 1935.

There are two kinds of series—the single and the multiple. We will, at this stage, deal with the basic single series. What we call “series” is the ability of the pendulum, as an indicating instrument, to rotate or swing in a given number of times, and then to change at a critical point. By using this series, one may identify substances

readily, even if they are in locked boxes. All things, animate or inanimate, have this series—or as we call it in Radionics, the “Rate” or the “Frequency”.

As a simple experiment, let us take Colours—seven of them. Obtain seven pieces of coloured filters or material and lay each piece on a new piece of white paper—in a line in front of you—but about six inches apart. Get your pendulum and hold it over, say, Red. The pendulum will start rotating clockwise. Count the number of turns, which will be about 14. Then the pendulum will do one of two things; of its own accord, it will either stop or swing in a given direction. Let us assume that the rate for the colour RED is 14. I say “let us assume” because although there is a rate for Red, different Reds, Greens or Yellows, etc., vibrate to a different rate. Test each colour in turn and keep a record of the series.

Next, put each colour in a sealed envelope or white box, and test again. By using the method of series, you can accurately find the right colour each time. However, if you do not wish to use colours, use three or four different objects such as coal, salt, sugar, etc. The result will always be the same, with some small degree of error perhaps, due to the sensitivity of the operator.

In the past, I have used this method for many things, such as tracing missing persons or objects; dowsing through a non-sensitive, etc. Usually I do not suggest party tricks with the pendulum, but you might find interesting this simple experiment with a glass of wine. Find three or four people who are willing to take part in the experiment. Let them sit together in a room and place on a table a glass of wine or mineral water, beer, salt water, etc., whichever is handy, with the instruction to them that only one sitter should drink the contents of the glass. The pendulum operator should then go out of the room until this has been done. On his return to the room, he then suspends the pendulum over the empty glass to obtain the series number, after which it is fascinating to watch the pendulum swing in the direction of the person who has consumed the liquid. This experiment can only be done once at any one sitting, otherwise confusion occurs, and you will obtain many errors.

The method of series has now been more or less replaced by the use of instruments, but it can still be a useful media to those who do not use instruments or who find them difficult to use. One interesting way in which the pendulum and the method of series can be used is in the study of mankind; for instance, it can be employed in character analysis, intelligence tests or similar work. By using the series tests, it is possible to test compatibility of two or more persons, their status (married or not) and many other facets of character. But this is no guesswork. It is pure and simple manipulation of the laws of nature, with the pendulum as an aid.

Once you have mastered the elements of the pendulum, study it further. It is a fascinating study, which will last a lifetime, no matter in which field of work you are engaged. But do not use the pendulum

as a toy! I never use my pendulum unless I am about to do a given experiment or any work with it. To use it as a toy or novelty will bring it into disrepute and the seriousness will have departed from its purpose.

May I suggest that if you are interested enough in pendulum work, you take one of our personal study Courses on the subject. This will give you more working data than can be set out in articles such as this. The choice of research work on this subject of radiesthesia is up to the individual, depending on his or her own interests along special lines.

The simple rules for pendulum operation are:

1. Use a good and reliable pendulum—one that is well-balanced and of a neutral colour. This will give consistent results.
2. Have an open mind towards the subject on which you are experimenting. Nothing upsets pendulum results more than erratic or negative thinking.
3. When first experimenting in Radiesthesia, always sit in the same place, and use the same table to gain consecutive results. When you get good results, you can gain confidence and work anywhere.
4. Work alone whenever possible. Other people in the same room—even if they ignore you—can upset results considerably.

With these few tips in mind, try using the pendulum based on the articles you have already studied, and you should obtain first-class results. In these articles, I have only touched the fringe of this great subject, with which I have been working for over 20 years. I am still learning . . . it is never boring, tiring or repetitious. You will always find a new interest when using Radiesthesia. It is a Universal science. It is a science of the future that can be used without special abilities—NOW.

When I was young, people told me that I had built a "wall" around myself. I called them "silly" to suggest such a thing, but it was not until I had looked around and had done things for others that I realised how high that invisible "wall" had become. Do things with a good grace, and you will find that in helping others, you are helping yourself more than you think.

FROM "HEALTHFUL THOUGHTS" BY BRUCE COPEN, F.B.R.A.

Health is what you make it. Whether you live a life surrounded by useless pills, which you are taking for unknown ailments stemming from unknown causes, or whether you ignore all medicines and are trying to be really healthy—it is all UP TO YOU! Don't waste your valuable time worrying about small, vague symptoms that may arise. Take your "natural" medicine and then forget all about it. The more you harp on illness, the worse it becomes.

BRUCE COPEN, F.B.R.A.

NEW FIELDS OF RESEARCH THROUGH THE RADIONIC COMPUTOR

Radionics in the form that we know it is—as far as we are aware—now reaching its 90th birthday. During this time there have been many researchers and many new methods of using Radionics and Radiesthesia, to the betterment of health and healing of the individual. Over the past 15 years, the author has constructed many pieces of apparatus that are in use in every country in the world, by practitioners and laymen alike, and it is due to the continued interest of these pioneers that we have been able to produce new methods, which in their ultimate effect are far-reaching, and which will, in the future, give us a complete picture of man and his environment.

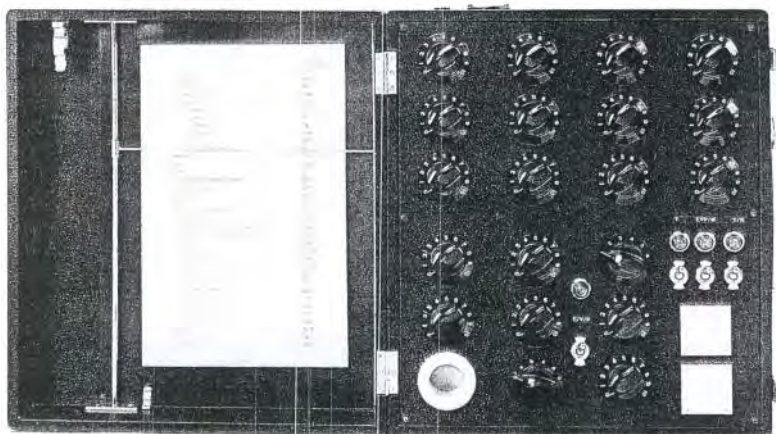

It has been known for many years that every person is different from another in that every blood sample taken exhibits its own peculiar phenomena, as far as Radionics or Radiesthesia are concerned. These facts have grown into more facts over the years until we find that man is not only an individual but he is a complete universe in himself—"the microcosm in the macrocosm". This universe that he is, is interlinked with other universes—other individuals—merely by radiational phenomena. The longer we look at life the more complicated it appears to be, until, at this point in Time, we are on the threshold of new realms of thought, new ideas of the Universe, new FACTS that cannot be denied.

Radionic broadcasting and diagnosis of plants, animals or man is known to be without a time-space continuum, in other words, it takes no passage of time and no amount of what we call Space to complete the cycle of events. Whilst we are on the subject of cycles, it is also known that the cyclic periods of any part of living or non-living matter can be traced by Radionics.

Until recently, we have been able to diagnose the physical and mental selves and we have also been able to treat the astral and spiritual selves by the phenomena of Radionic Broadcasting, but whilst it has been known that every single person has a Personal General Rate of his or her own, it has come to light that every person also has, apart from their cyclic periods, a Personal General Disease Rate (PGDR) or Frequency, a Personal Mental Rate (PMR), a Personal Astral Rate (PAR) and a Personal Spiritual Progression Rate (PSPR) and other Rates on a higher plane.

The reader might become confused if I tried to explain everything in a short article such as this, but in due course a booklet will be made available for those who are interested in this field of research.

Research into, and examination of, the higher planes of existence can be brought about by the use of the instrument known as "THE RADIONIC ANALYTICAL COMPUTER", Marks 1 and 2. The difference in Mark 1 (or model 1) from Mark 2 is that in Mark 2 model a far greater range of rates is available, and now that we have broken the barrier in this unusual field of research, there is virtually no limit to the possibilities of further investigation.

Briefly, the Radionic Analytical Computer (RAC) is a combination and extension of several existing instruments made in my Laboratory. It is a complete model "Y" instrument with 6 multiple ranges, over and above the normal operating range, plus over and underfunctioning test dials, plus an Electronic vibro-potensiser (which has two ranges) plus an unlimited degree of broadcasting frequencies. The combination possible from the Mark, 1 instrument, from 12 dials alone, is nearly a million. On the Mark 2, this figure is doubled, and no doubt, on further research, this range can be further extended.

Radionic instruments are delicate pieces of apparatus, and I have often heard of researchers "knocking up a broadcaster, or "diagnostic", and with a small amount of knowledge—as in all things—this can have grave dangers. These instruments, operating on very high rates, MUST be made by an operator who has a sixth sense and an appreciation of the unknown factor in Space and Time.

However, at this point I would like to stress that if a radionic instrument is made by an experienced manufacturer, there are no dangers whatever, since the problems, about which the amateur has no knowledge, have been carefully eliminated.

When we think of the huge amount of radiation around us this very minute, the fact that each and every one of us is a small Universe, plus all else that exists, makes the task of sorting things out a very formidable one. But the secret of selection is in the phenomena of specific radiations (or fundamental radiations, as we shall call them). Were it not for these fundamental radiations, none of this work would be possible, because there would be no method of selection.

The accompanying photograph of the Computer mentioned in this article shows the layout of this very portable instrument. And since the complicated parts are all within the instrument, the instrument itself can be operated by almost anyone, in the same way as the Model "Y" instrument and others. But what can be done, say, with a single specimen on this new instrument? You may well ask! If we have any secrets, the answer, brought forth by the aid of the Computer, might be too frightening to think about! Let us take sample A and see what can be found out about it.

Placing the specimen on the plate A of the instrument, we switch on the automatic FR tuner, and allow about 60 seconds for the tuner to set itself, after which we can do any of the following:

1. A complete diagnosis/analysis of that person from whom the specimen came—that is to say, the physical analysis. We also select the Personal General Rate (PGR) if this is found to be necessary. We may test also the over or under-functioning of the individual concerned. This diagnosis can reveal illness before it becomes pathologically apparent. In fact, with the common cold, for instance, pre-determination is about 48-50 hours, thus enabling preventative measures to be taken.
2. The next range we can test is the mental or memory range, and with this, find the Personal Mental Rate (PMR) for records or treatment, as the operator wishes. This range will give a complete record of the mental progress of the individual from birth to the present time, and with a selection of these rates the operator can—given time—build up a picture of a group of mental areas. The scope is quite large. The Cyclic periods can also be plotted by this method.
3. A further range will find the Personal General Disease Rate (PGDR), which ultimately will be a great step towards finding immediately the category of any given ailment, without actually giving a definite name to the illness. For any illness is but a continuation of some previous disharmony, or a deviation to the positive or the negative from the normal. This PDGR can be useful in giving the exact treatment at the exact time it is needed.
4. Yet another range—which until this instrument was invented was difficult to assess—is the Personal Astral Rate (PAR). This is the rate for the auric fields surrounding the living tissue, and it is possible to give direct treatment FOR THE FIRST TIME to the Aura. Hitherto, the Aura has not received much attention, because of its inaccessability by normal means. Many so-called

"incurable" problems can be cleared up by treating the Aura direct. The PAR can, in fact, give a lot of information about the individual, which can be tied up with other information already obtained by using the lower ranges on this instrument. Furthermore, as with all the other ranges of testing, the Cyclic periods can be found and plotted IN ADVANCE.

5. This range, together with No. 6 range, covers the Spiritual Progression Rate (PSPR). The object of research into the PSPR may not, at first, be obvious, but it is possible by this means to plot a subject's personal progression from a Spiritual standpoint, so that, for instance, should the subject be having instruction on spiritual progression, it is possible to plot any advancement, or otherwise. Disease in the physical self may, naturally, upset the Spiritual self, and it is possible to check on this aspect at any time by testing the PSPR.

Having examined all these aspects, it is possible to give broadcasting treatment on the selected frequencies (rates) at any level, and to give or make specific Electronic potentised remedies for each individual case.

Additional advantages and benefits derived from the use of such an instrument are as follows:

Employment. No matter where the location or what the work, it is possible to select the right person for the right job.

Habitation. It is possible to select the most suitable area in which to live and to work.

Harmonious Relationships. Two or more persons may be tested with regard to harmonious relations, and the weak points and idiosyncrasies can be uncovered. This testing would prove of great value in connection with marital problems. Testing for any affinity or for any discord—at any level—in any subject can be made and, in some cases, within minutes.

Business. It is possible to select the most profitable business for any one person or for a group of people.

Animals, Plants and Soil Analysis, etc. Advantageous testing may be made in respect of all of these.

Over the years, many tests made have proven how very accurate such a unique method is. For instance, in every 100 persons tested for the right type of job, it was found that 30 per cent were already in their right jobs and 70 per cent were not. Of this 70 per cent, over half changed their jobs to comply with the result of the testing, and these people have found themselves better off—both in health and pocket for so doing. In regard to the selection of an area for living, of each 100 tested, 22 per cent changed over to the location selected, and as a result, found their general living conditions greatly improved and their health also. Thirty-eight per cent ignored the tests' results and the remainder harmonised with their existing surroundings.

NEW FIELDS OF RESEARCH THROUGH THE RADIONIC COMPUTER (2)

Since my previous article appeared a lot of interest has been shown in the Computer methods, and in this article I will try to outline some of the uses of this advanced instrument. Let me stress, however, that the term "advanced" is merely technical phraseology, and has nothing to do with the fact of its being difficult to understand or operate. Almost anyone can use the Computer Marks 1 or 2 with ease.

We have already outlined the different types of radiation fields which are complementary to one another and that go to make up the small but complex "Universe of Man"—that is to say, the Universe within the living Being. Some readers may want to know if any good purpose is being served in the finding of complicated radiation fields connected with the Self. I can assure you that all we can discover within the next generation or so, will give a boost to research for the next one hundred years.

The first and more commonly used of the Personal series of Rates is termed the "Personal General Rate." This Rate is a frequency upon which the individual—physically—can be located or analysed. Every living thing is completely different. Every apple on a tree; every flower in a garden; every person on the street—all are different from their neighbours. We know that every organ of the body has its own frequencies and polarities. These are constant in all beings. However, the whole—totalled together—gives the Personal General Rate. A fingerprint, footprint or dental pattern can never be duplicated, and so it is with the Personal General Rate of each individual. From this Rate we are able to give a quick and precise analysis, and an immediate broadcasting treatment.

The P.G.R. (Personal General Rate) is always the same after puberty, only its intensity varies with age or with illness. This intensity can be accurately measured and charted, and may be used in conjunction with cyclic research. The P.G.R. is only the beginning of a whole new world that has been opened up for us by the use of the Radionic Computer.

In the next higher Range—the Personal Mental Rate—we again find a specific radiation field applied to each individual. Everybody's P.M.R. (Personal Mental Rate) is different from that of his neighbour. It continues the same throughout life, varying only in its intensity. By measuring and charting the pattern of the intensity at any given time, we discover patterns of alertness, depression, etc., and can then take measures to erase any problems that may occur. This is not to be confused in any

way with psychological or psychiatric principles. All that we are doing is to plot the radiation measurements of the individual—our ultimate aim being the restoration of health and rendering assistance when required.

The most startling discovery over recent years has been the Personal General Disease Rate (abbreviated to P.G.D.R.). This is a Rate or frequency which is continually changing in intensity, but which—on the other hand—remains fairly static until the next stage of a disease is reached. In using this method, we open up possibilities in the scanning of a disease pattern, and in an immediate identification of a disease, its advancement or retardation. For example, it may be possible in the not-too-distant future to place the P.G.D.R. in a scale from 1- to millions. If we take number 1 as the true health condition of the individual at birth, or for that matter, at any stage of life, we discover, for instance, that Baby Jane's P.G.D.R. at birth was 789901663; that Baby John had a P.G.D.R. at birth of 44781, and a third Baby, Fred, was 561. We can, therefore, actually predict for these three infants, the pattern of health to come—and also their cyclic periods. Taking Rate 1 as a state of perfect health, we would then say that Baby Fred was the healthiest, and would remain so throughout his life; Baby John would be prone to diseases in the area of his Rate pattern, but Baby Jane would not be very healthy, unless we make an initial effort to change the pattern early in her lifetime. The essential thing, therefore, is to find the original pattern from which to work, including polarities and cyclic periods.

Thus, the P.G.D.R. will give much scope in the prediction of illness in later life. Once we find the key to the pattern of life, we may find the P.G.D.R., which enables us to say: Oh yes! Mrs. Smith has a P.G.D.R. of 5590221. This puts her in the range of, say, Asthma or Rheumatism—or whichever disease approximates to the appropriate Rate. This would eliminate much of the preliminary work now undertaken by diagnostic methods.

The level of Rates is a continuous spectrum, and is never on a simple separated band of frequencies, and in order to give some meaning to them, we must be in a position to give some classification. Hence the next highest band in the spectrum of Rates is the Astral (or Auric). This is called the Personal Astral Rate (P.A.R.) and may be used to follow the colour pattern of the aura or radiation belt around the living person, animal or plant. With this method, treatment direct to the aura will alter its intensity and colour over and above the mental output into the auric field. It is possible, therefore, to give Radionic Broadcasting treatment to the mental or higher self, thus overcoming bias and aggressiveness to be found in some mentally-unstable people.

The last set of Rates—which have a very wide spectrum indeed—are what we term the Personal Spiritual Progression Rate (P.S.P.R.), and as with the P.G.D.R. it is possible to plot in advance a child's spiritual (karmic?) advancement at birth, and so guide it on the right road through life. Likewise, it is possible to raise the P.S.P.R. in accordance

with instruction, thought, ideas, etc., during a given period in life. This, in time, will become the only exact method of plotting or selecting in advance---from the spiritual point of view---the personal progression, and from the stand- point of occupation or career, the right person for the right job.

There is no doubt that- at some later date- the scope of this instrument will widen still further, for we are not just delving into the unknown worlds around us, but we are exploring BEYOND the brink of the unknowable into the hidden but fascinating world of the Inner Self. And we shall obtain---we hope---information never before given to us by any other method.

Any reader who would like to hear more about our computerised systems may be interested to know that more comprehensive data is given in our new Catalogue, which is now available, and which I feel sure will prove of great interest to those wanting to know more about this particular method. It is possible, by the methods outlined therein (and also in these articles) to have regular tests made, which---if acted upon---will transform your life far beyond your present conception.

In my earlier article, I did mention the possibility of selecting by this unique method, either a job or the right man or woman for a special job. Under ordinary circumstances, the position you are seeking (or the position that is seeking you!) is based on: (1) Appearance at the interview. (2) Academic qualifications. (3) Ability for the work entailed. (4) References from previous employers. However, with the Computer reference system, it is possible not only to find the right job for the right man or woman, but to find the best employer. This is based on all the radiation fields and periodic cycles involved. In most firms the costly turnover of staff is becoming a major problem, and the training of new men costs time and money. Far better, then, to find the RIGHT person or the RIGHT job at the outset---NOW. In test firms, the reduction of staff turnover in 1964 was reduced by 85%, and in 1965, the figures---as far as we know at present---are in excess of this.

The method does not eliminate personal interviews, unless specified by the firm concerned. A short list can be made out from computerised findings. And, as stated before, although we have specially mentioned the employer who is looking for an employee, this also applies to the employee who is looking for the right employer.

All that is necessary to find the right man or woman is as follows:

1. A photograph should be supplied or a spot of blood as sample---otherwise the test is completely impersonal, and no bias enters into it at all.
2. The birth-date of every applicant must be given, in order to assess the definition of cyclic period study and calculation. Married or Single status should also be given.

3. Present hobbies, and location (the latter can be approximate only: no address is required. The test is to select the BEST location for the job. This data, however, is not essential).
4. Data to be given by the employer, viz: Is the position to be filled a manual or a mental one, and what duties are entailed (briefly)? Position to be filled in relation to other workers?

From the above information, it will be seen that the job can be assessed from every angle,--- Physical, Mental, Astral and Spiritual. For instance, if an applicant had home problems which were causing mental stress, these might not be discovered by normal methods, but by using the Radionic Computer, the abnormalities can be assessed, thereby enabling the applicant to be happy in the new job or making it possible for the mental stress to be taken into consideration when the employee is finally engaged.

It is hoped in due course to publish further material in booklet form for those interested in the methods involving the use of the Radionic Analytical Computer, and we welcome any suggestions for research with the Instrument in question.

THE SPIRIT OF INVENTION

I have lived since Man began on Earth
And watched him grow, and expand in quantity,
When scarce had he been born his hands he used -
To make the plain tools that promoted life.
His house, his food, his war and peace he did depend
on Me.

Then, as he advanced through time he needed me still more -
to guide through life - to help him make new things.
Then as time passed him by -- in many thousands he -
Did invent machines which conquered him
and made him like machines, automatic in his action. .
Automatic in his thought.

Today - Man stands not ruler of his Invention, as he should be.
But weary slave, as he invents still more,
Never ceasing in his unceasing efforts to create the perfect things
Of Peace and War.

(Extract from: Act. 2. Sc. 2. Cycle poem "Fantastique d'Humanite ,
by Bruce Copen. FBRA).

THE RADIONIC COMPUTER ANALYSIS

In earlier issues of "*Natural Therapeutics*", I mentioned the details of the Radionic Computer, and many readers wrote in to ask what the benefit was compared with the ordinary analysis features usually associated with Radionics.

The Radionic Computer has more than two million possible combinations of rates, ranging from the physical to the spiritual, and within this range lies the secret of almost every problem that may be connected with Human, Animal and Vegetable life. Therefore we have a tool that will find with great accuracy the CAUSE and the cure of any given problem. The accuracy is much greater than that of any previous instrument, and—depending on the sensitivity of the operator—100 per cent accuracy is usual.

The Computer analysis, in the medical and psychological sense, gives a complete picture of the patient from every angle. The Computer, of course, can give a variety of tests from the simple to the complex, but in this article we will outline the general medical and psychological tests.

When doing any analysis by this method, one must always allow for age and the patient's own sensitivity to treatment . . . and this is given in notes within the analysis. The measurement of over and under-functioning is given as a Positive for over-functioning, and Negative for under-functioning, with the Neutral as normal functioning. From this, we measure in percentages the degree Positive or Negative from the normal, and depending on the degree of percentage, we can assess the whole analysis.

The Physical

The physical part of the Computer analysis includes all muscle, tissue, skeleton, and nervous systems, etc.—in fact, the whole body structure. Also, including lack or excess of Vitamins, Minerals and Trace Elements, etc. The physical analysis is very accurate, and may be reconstructed by the practitioner to form an overall opinion of the patient. The idea is to give an internationally-acceptable method of Radionic Computer analysis, recognisable by practitioners all over the world.

The Causes

Every disorder—no matter whether it be physical, psychological or spiritual—has its initial cause, and this section of the analysis

is most important. It gives as possible causes: Any form of shock (physical, mental, spiritual, pre-natal) allergies, personal relationships and incompatibilities, discords in the home or office, unsuitable environments, etc. And it also gives the age when the cause might have originated.

Psychological

The psychological aspect of the personality can help or hinder one's actions and decisions in daily life, and any form of therapeutics. In this connection—by careful selection of the positive and negative elements in the analysis—one may give guidance, and in due course, overcome difficulties, which otherwise might not have been apparent by normal methods of analysis.

Treatment

The section on treatment stresses the Natural way of healing, and with its aid, one may use the personal rates for radionic broadcasting, or one may use any selected therapy as indicated by the analysis. Every commonly-used natural therapy is listed, and the results of the analysis in this section give the best treatments in order of preference and possible effectiveness.

As you may be aware, the completeness of such an analysis is way ahead of any other known method—orthodox or unorthodox. For not only do we make a complete analysis of the whole BEING as an individual, but can discover the CAUSE, and know the EFFECT of treatment in advance; in many cases, we can forecast the breakdown in tissue, etc., in ADVANCE.

This might appear to be an exaggeration, but if we look at the situation in a sensible way, it is quite possible. No illness just switches on or off, no matter what the physical symptoms might at first appear to be. Every illness—slight or serious—takes its time to appear as physical or mental symptoms. Therefore, in whatever parts affected, there is a lowering or rising of the normal cell activity. In some cases, this lets in bacteria, virus, etc., which further depletes, or in case of, say, fever, aggravates the condition. But long before physical symptoms appear, the background for that illness is laid. By the use of the Radionic Computer, this underlying cause can be detected at a very early stage, and preventative measures taken.

To forecast a common cold 36 hours before the first symptoms occur and to take prophylactic measures to prevent them appearing, might lead the layman to say: "Well, I might not have a cold coming on". This might be so! But isn't it better to cure at the cause stage, rather than risk other symptoms appearing after the cold itself had really come to stay—thus causing distress and time off from work?

So we can see just how—in a simple manner—the common cold may be detected and stopped. But this does not rest with the detection of the common cold. With the aid of the Radionic Computer we can, if we so desire, measure cell disturbance at a very early stage . . . of months, rather than days, in pre-determination of a physical or mental illness.

Likewise, in the case of plants or animals, we may analyse the basic cell structure, if required, and in so doing we do not have to have a dissection room or other special equipment, neither do we have experiments on living beings, whether they be plants or animals. The whole procedure is based on existing wave-forms, given out by the subjects under test. The method employs ONLY the natural forces in all animate and inanimate things, and thus may be the medium for searching the universe for the beginning of life itself—using no other tool than the Radionic Computer.

Only those who work with these modern instruments will appreciate the type of work they are undertaking. They are the scientists of the future—living and working on the brink of the knowledge of the Source of Life. They will be using no very complicated equipment; it can be understood and mastered in a very short time, and will give a lifetime of service and interest.

If any user of the Copen instruments cares to write to the address of this magazine, a specimen copy of the new International analysis sheet will be mailed, for postage.

FROM "FANTASIE D'HUMANITÉ"—ESSAY ON MANKIND
PROLOGUE TO ACT 2, SCENE 1

. . . "Man—within your hand lies the unshapen lump of potter's clay,
'Tis within your power—within your feeble mind to make
Things of good—to help humanity on its way,
Or things to destroy—to ravage this Planet Earth.
Consider—once you were made from potter's clay,
And so you will be again one day,
But whilst thou livest and hast these hands of thine,
Give what is good to all men—and to Time.
Within thy hand, O Man, lies the power to destroy the World—
Therefore, use it carefully!
Mould the clay as you please. The choice is yours . . .
Choose wisely!"

B. COPEN

IT MIGHT BE TODAY

It has always been known that the world we live in is subject to periodic cycles which are both positive and negative. For instance, there are periods of power and then of depression, of the rise and fall of nations, and in natural science, high tides and low tides. Until this century—approximately 1930—little else was known about these things. The first-known person to make a study of these “cycles” was a Psychologist, Dr. Hermann Swoboda, and he wrote about them in his book, “Die Perioden des Menschlichen Lebens”—The Phases in Man’s Life. The most thought-provoking work by this Writer was “Die Kritischen Tage des Menschen”—The Critical Days of Man.

Since that time, many works have appeared, and much research has been done, on this subject, and in his latest book, “Is this Your Day?” George Thommen expounds the theory that cycles can affect us greatly. In my own research, I have found that cycles can have a very far-reaching effect—far greater than is realised.

It is known that there are three—what we term “basic”—cyclic periods in every one’s life. A cyclic period consists of a stated or proven period which can be worked out and charted according to one’s birth-date and time. This is a definite mathematical and strictly scientific approach, which is not to be confused with astrology. It can be proven, and HAS been proven over many years. Some writers call these charts: “Bio-Rhythm Charts,” and others, “Bio-Grams” or “Psycho-Grams.” However, the name is the least important factor in this study.

The three basic periods consist of a 23, a 28 and a 33-day cycle, and each of these cycles can be plotted and shown on a chart, having its own colour, as follows:

A **Red** cycle represents a 23-days’ period, during which one can experience maximum or minimum endurance, physical strength, confidence, energy, etc. This cycle reveals the best days (crucial days) on which one’s physical energy may or may not be at its best. With the use of this chart, one may assess certain days for physical undertakings.

A **Blue** cycle represents a 28-days’ period, showing a cycle of personal sensitivity, nervous tension or depression, intuition, cheerfulness, mental stress, etc., and giving an indication as to favourable times for doing mental work, or avoiding it; also, depressive periods and when to avoid them.

A **Green** cycle represents a 33-days’ period—for memory, mental alertness, moodiness, reasoning power, ambition, etc., and like the other two cycles, the highest or lowest periods can be charted in advance. Thus one can make good use of these high periods and avoid the low ones.

There are also times when these charts will cross at a meridian or "critical" point. On critical days when the Red and Blue cycles pass each other, our cells seem to be in a state of "inertia", and on these days we are more accident-prone. If a critical day coincides with a complete "low" on another cycle, it will behoove us to be extra cautious.

Chances of "critical" days vary so much with the individual that it would be impossible to illustrate this here. However, in a future article I will give a specimen chart, showing the various points of interest.

These Bio-Rhythm Charts can be assessed for all kinds of things, e.g., foretelling, with great accuracy, the sex of the unborn child; foretelling the best times to undertake business deals; estimating compatibility, and many other things. On the other hand, I have discovered that there are *special* cycles, which can be applied outside the sphere of the individual, and yet which can be duly noted, for they present certain valuable trends.

Other cyclic charts which can be made available are: Health, Business and Financial Trends charts. All have their cyclic periods. For instance, if you start a business—or if you are already in a business—depressive periods can be assessed for future years. If you employ staff, it is possible to work out each employee's chart in order to gauge his harmonious relationship with others and with the business generally.

A vast amount of research work has been undertaken by various authorities all over the world, and the study of "life cycles" can be very interesting and rewarding. Proof is the only way of assessing anything, and proof there is in this method of evaluation.

In the first place, the calculation of the charts is worked out from the birthdate of the individual, and once the original cyclic periods are known, then the continuity throughout life can be assessed. We know of not less than 30 published works in various languages on the subject and no doubt more will materialise. Meanwhile, we are constantly being made aware of the tremendous possibilities of research in this connection.

Not only are there cyclic periods in man, but also in animals and plants, in inanimate objects, and, in fact, in the whole earth and the universe itself. It is known that the earth is in continual motion and that (quite apart from the sea) it has its "tides." Observations have been made which reveal these "tides" to be similar to those of the sea. Cyclic periods can cause stress in metals, which is generally termed "metal fatigue." And in animals there are physical stress cycles that can be plotted.

The scope of these charts is very great, and, if desired, they can be worked out for next year, ten years hence or for a lifetime. I would emphasise, however, that this method must in no way be thought of as "fortune-telling."

In all, the subject is a never-ending source of absorbing interest and study, and is most rewarding.

(For further details about this method, with information on available charts, please write to the Editor.)

COLOUR HEALING FOR YOU

During the past twenty years or so, Colour has crept into our lives in so many different ways, and with this "New Era in Colour" men's thoughts are revolving around the subject, particularly with regard to the treatment and cure of disease. With the advent of bright, colourful materials, plastics and furnishings for the home and office, life has become increasingly interesting and exciting, but it is in the practical and sensible use of Colour that we shall find the greatest satisfaction and joy, with resultant good health and well-being. Many Colour Therapists are as yet unaware of the many facets of Colour for healing purposes and as a psychological aid in life, nor are they yet aware of the tremendous scope and magnitude of the use of Colour in this connection.

As nearly all readers know, Colour—in the first instance—comes to us via the sun's spectrum. The Dictionary definition of the word "spectrum" is as follows: "The image of light split by a prism into bands of different colours, representing the constituents of the incident light." We could delve deeply into the technical aspects of Colour, but this would involve a whole series of lengthy articles, so here we must confine ourselves to a few cursory though pertinent remarks.

In order to understand Colour, we must, first of all, know how many kinds there are; we can, therefore, list them broadly as follows:

1. From sunlight—which varies from place to place, and with the seasons, and times of day, etc.
2. From Electric Lamps—together with the effect obtained from special-type light filters.
3. Magnetic Colour—as revealed by the Coloronic Instrument, where 360 different shades are obtained.
4. Reflective Colour—as from walls, clothes and various objects.

At noon, in a clear atmosphere, sunlight is at its purest—the light being a "high white", but this naturally varies with every country, with the different seasons of the year and times of day. The drawback—if one can call it a "drawback"—with this form of light is that it contains ultra-violet and infra-red rays, which in certain cases can neutralise the effect of the white light itself. Thus, in Colour healing work, we use special Solar filters, which inhibit the rays we do not want, and these filters compensate for many of the variations in the tonal quality of sunlight.

This tonal quality is technically called "Colour temperature", and has nothing to do with the heat qualities, but rather the intensity of the Colour source. There are several countries these days which use SOLAR THERAPY for healing, with wonderful results. Peru in South America is one of them, and here the air is clean and free from industry fumes and smoke, making it ideal for this practice.

In countries where the sunlight quota is low, such as England, it is essential that we use special lamps for Colour treatment. Here again special-type healing filters are used, and in order to obtain the best results they must be combined with the right colour temperature lamps, otherwise no pure colour will result. For home use the lamps can be quite small, or very large for clinical work. However, the same end product must be achieved, i.e., the correct colour for the specific treatment.

A form of Magnetic Colour—which has its origin in New Zealand—can also be used with great benefit. All normal light colour is termed “Electro-Magnetic,” since it contains electrical and magnetic particles. Magnetic colour, on the other hand, is not created by the light waves, but is obtained by means of a special instrument called the “Coloronic”, which is essentially a Radionic device for blending certain types of frequencies or RATES. From the 360 principal shades, it is possible to produce many others in order to determine what is the exact colour treatment for a specific illness, or personality.

Reflective Colour is caused by white light “bouncing” from objects, such as artists’ paints, clothing, buildings, etc., and this may be used (in what is loosely termed “Colour Psychology”) in order to create the right atmosphere in the home, office, or place of entertainment, etc. The end products are usually sensational and students all over the world have verified the fact that “Colour in Your Life” is one of the most important things, other than, of course, food and water. Where a disharmonious environment is the cause of unhappiness and trouble, Colour can be used very successfully. This form of Colour healing has produced some startling results on animals, and it has been ascertained that they respond very favourably to the right Colours in their surroundings.

“From the time when we wake in the morning, until we retire at night, we are surrounded by an ever-changing display of colour. We are so used to this display from our earliest childhood onward, that in this, as in so many other experiences of life, familiarity breeds contempt. Few people, indeed, unless they are artists, or in some way specialise in the harmonising or arranging of colours, take much notice or appreciate the wonderful daily feast of colour which nature has provided, unless it be a brilliant sunset, a rainbow, a field of poppies or buttercups, a woodland full of bluebells or a shop window displaying the wonderful fabrics of modern dye and textile industries, which forcibly arrest the attention.” The foregoing—taken from “Colour in Health and Disease” by C. G. Sanders, F.R.P.S., D.Sc.—gives in a nutshell the whole outlook on colour by the average man or woman.

Again, the same Author states: “Either the whole of sunlight, i.e., white light (filtered) can be used, and may be left to the vital mind to use it or filter it as desired, or we can disintegrate sunlight by special solar filters. . . . Chromo-Therapy is the science which teaches the use of different colours in changing disease vibrations into normal or healthful vibrations.”

On the other hand, we may look at Colour from a photographer's point of view, when we quote Andreas Fenniger in his book "Successful Colour Photography", where he states: "The forces that produce the energy we perceive as light are of an almost inconceivable magnitude. At its present rate of radiation, every minute the sun explodes into space 250,000,000 (250 Million) tons of its substance in the form of radiant energy. The pressure of this radiation is so immense that if it were possible to take a piece of the sun, no larger than a bowling ball, the light pressure emitted by it alone would be enough to knock down a man at a distance of fifty miles. According to a hypothesis developed by the Swedish astronomer, Arrhenius, spores of virus and primitive bacteria can be carried from Planet to Planet across interstellar space by the pressure of radiant light. Photography has harnessed a truly Cosmic Force."

"Colour Lamps should be considered an end in themselves; they serve to provide light and health at certain levels of consciousness. There is a great need for accurately employing the potencies of Lighting-Therapy. On the other hand we should increasingly appreciate that lamps are but posts on the pathway of healing, leading to the awareness and employment of spiritual illumination," so says Roland Hunt in the Foreword to his now out-of-print book "Lighting Therapy and Colour Harmony." This Author has written a number of books on this important subject, two of which are "The Seven Keys to Colour Healing" and "The Eighth Key to Colour"—the latter, recently published. All his works are instructional and tell of Colour as a therapeutical agent and helpful medium.

There are three primary Colours and these are termed "true" primaries. But, in point of fact, in Colour healing we bring into use the seven basic colours of the rainbow—Red, Orange, Yellow, Green, Blue, Indigo and Violet. Each of these primary Colours, however, is not a kingdom unto itself alone, for every Colour has its own positive and negative spectrum, and unites with the remainder of the white light spectrum, which is, in reality, a combination of the seven primary Colours. From one of these Colours—let us say RED, for instance—we may obtain as many as 50,000 shades or tints, ranging from deep brown-red to a yellowish-orange red. The true Colours which we use in healing have a specific frequency (or wave-form) by which they are recognised, and they can be measured scientifically. These wave-lengths are measured in Angstrom units.

In order to give effective therapy, "any old Colour filter" will not do. In fact, failure to obtain results in Colour healing is mainly due to using the wrong type of filter. There is available a special range of filters which is quite inexpensive and, with careful use, will last many years, and small portable healing lamps which will give the very best results are also obtainable.

If you have so far been unaware of the fact that Colour can help you, either in illness or with mental problems, may I suggest that you

let Colour come into YOUR life NOW. And the beneficial results therefrom will prove to you that life is not just a dull, black and grey existence. Go out for a walk, cycle or car ride—and take with you a camera; an old one will do. Buy a Colour transparency film and take some pictures of anything which has a special appeal for you. Undoubtedly, you will get some very real joy from this experiment, and you will be pleasantly surprised at the results. The place you took for granted as being without much interest—perhaps dull and lacking in Colour—will be revealed to you as one of great beauty and purity—so much so that you probably will not even recognise it. However, there it is. . . .and there is nothing magical about it. . . .the Colour and the beauty have always been there, but you have been so familiar with it all that it was not until you took a Colour film that you *really knew* that this magical COLOUR had always been present! After this experience, nothing will be quite the same again. Your senses will be heightened and you will become more and more aware of the JOY OF COLOUR IN YOUR LIFE. Try it—and see!

THE PROBLEMS OF FALL-OUT

Generally speaking, the term "fall-out" is just something we read about in our daily newspapers and is all mixed up with Science and Atom Bombs, but in point of fact the matter goes much further than that. Fall-out is the by-product of atomic experimentation and atomic waste from reactors. In the event of an atomic experiment taking place underground or on the surface, a great amount of fall-out particles float around in the atmosphere, often travelling around the world and settling on sheep and cattle, our clothes, the grass and food substances. It is true to say that over all the amount of fall-out is small, but in many cases, it is enough to upset the biological functions of the vegetable, animal and human kingdoms.

We shall never know the true facts about the damage done by waste radiation of this kind. Sometimes these facts are suppressed by scientists, and often no-one knows the effects because present-day measuring data is not sufficient. Only time can prove the adverse effects of fall-out. At the present moment, arguments are taking place between orthodox scientists who cannot agree as to what the danger level of fall-out is, or whether this level has already been reached. Dr. Pauling—a chemist and Nobel Prize Winner—thinks that the danger point was reached in the United States when they exploded the first atomic bomb in 1945. He estimates that the 50 megaton bomb alone would cause 40,000 babies to be born with physical defects within a few generations, and over the next 600 years, 400,000 more would be either stillborn or defective in some way. He also fears unknown numbers of cases of bone cancer and other diseases, and that physical defects would appear in adults.

It is generally accepted that the average person receives about 5% radio-activity as the result of natural radiation and cosmic waves. One atomic test increases this by another 5%, making a total increase of 10%—to which all living things are not accustomed. It appears that orthodox science is so undecided about the whole problem that the level continues to rise as the result of earlier tests and even those going on at the present time. Drug manufacturers are already threading their way into the queue for more millions, by producing anti-fall-out pills, which will do no good and possibly a great deal of harm.

The biological structure of all life is of a delicate nature. Give plants too much fertiliser and they will die; give them not enough and they will still die. Leave them to their own method of re-creating waste matter for food and they will thrive . . . all nature works on this simple principle. Now if we give just one or two overdoses of fertiliser to a plant, we obtain signs of poisoning or weakness, leaving the flowers and leaves open to attack by insects and viruses. If, however,

we only overdose a few times and then stop, the biological constitution of the plant will overcome the poison, and it will eventually thrive again. But if we continue to over-fertilize, thus aggravating the condition, the unfortunate plant will die.

I have given a plant as a simple explanation of what can happen to ANY form of life should the poisonous effects of deadly fall-out continue. By the use of more delicate forms of measurements, such as Radionics, we can really know how the situation stands. Many practitioners throughout the world have shown me case histories of patients who suffer from the effects of fall-out, but after taking the natural precautions and making use of rectifying equipment in the home, these patients were ultimately cured. We cannot know the exact proportions of this negative radiation, for it varies a great deal in different countries, but we do know that it is with us RIGHT NOW and something must be done about it before other and more serious symptoms occur.

Radionic equipment is the only known method that gets down to the root of the problem and finds the cure. This system of delicate measurement helps the practitioner and farmer, etc., to test every thing at the outset and ALLOWS for fall-out symptoms in the diagnosis.

In order to reduce the symptoms produced by fall-out, we must consider two aspects, viz: (a) the direct effect on the body (meaning here, any form of life) and (b) the indirect effect on the body. Both are equally important. All types of radiation, whether harmful or not, possess the property of polarity peculiarities; these are more or less equally balanced in, say, electricity. It is when we introduce abnormal polarity that trouble occurs.

Unrectified radiation—that is to say, radiation that has a nucleus of abnormal polarity caused through its action—occurs in the following cases: radio-activity that has undergone rapid alteration in molecular structure (as in atomic fall-out or waste), X-Rays, hi-frequency electrical and magnetic devices, and in such things as television, hi-frequency medical apparatus and the like. Because of these stresses involving an alteration of polarity, there is an increase in travel sickness in planes.

People all over the world are really worried about this serious problem, and well they might be. It has been stated over the past few years that the Finnish people are concerned because of contamination of their reindeer meat. Britain has already set up plans for supplying baby-milk from tins, in case of contamination. In India—added to the distress caused by present famines—they fear contamination of chicken and other foods. In Australia, the sheep farmers are deeply concerned, as are also the United States food producers.

Three things can NOW be done, and they are:

- (1) to stop nuclear tests;

(2) to spend more on vital research into the excess fall-out problem (including harmful fumes from motor vehicle exhausts) in the world today; and

(3) to use some effective method of decontamination for the simple radiation problems—proceeding to neutralise the more harmful as soon as possible.

In Radionics we have also been working on the decontamination problem, and with the help of practitioners all over the world, certain devices are being produced that will neutralise personal fall-out problems. It is hoped within the next few years to have larger devices for farmers, in order to protect their crops and livestock.

The Radiation Rectifier (R.R. for short) is a portable device designed to neutralise fall-out types of radiation, including the harmful effects of T.V. radiation. The device is known to have cured many types of ailments which under test by Radionic practitioners have been found to have been caused by negative radiation. This instrument—as far as I am aware—is the only one of its kind generally available.

In my booklet, "Living with Fall-out",* the method of application of this simple device will show its usefulness in the home, clinic and at the office, etc. Results—not only on human beings but also on animals and plants—have revealed that a good 70% of all symptoms (known cases) caused by fall-out radiation have been cleared. However, it is not just enough to clear radiation now; the problem will recommence if such instruments are not installed as permanent fixtures in the home, office, etc., working automatically to clear the air and various substances of unnatural forms of radiation. For over 4 years I have had a number of experimental automatic devices in use in different parts of the world, with excellent results. In many cases where the Rectifiers have been placed in offices, etc., the decrease in absenteeism has dropped dramatically.

Fall-out once with us, will always be with us UNLESS we do something about it NOW, otherwise within the next 100 years a race of grotesque people will rule the earth.

*This booklet is obtainable from the Editor at £3 or \$6 U.S.A.

*No greater thought has he who seeks to find the Truth,
No smaller force is needed to find the path of it,
The greater energy you expend to seek the whole of life,
The smaller are those chances of finding this Truth.*

B. COPEN

DYNAMIC CYCLES IN LIFE

In my earlier article on BioRhythms in Volume 3, No. 1, a brief outline of the possibility of using cyclic periods in your life was given. Since that time, many readers of "Natural Therapeutics" have written for more information.

The whole of life and the universe is dependent on cycles, or periods of depressive activity and dynamic activity, so called negative (passive) and positive (active). In some phases of nature these are repetitive, occurring at the same intervals; in others, there are irregular cyclic periods. It has been known for a long time that Man himself has been susceptible to the influence of the moon's phases, and to a lesser extent, to the sun's activity.

In recent years, it has been revealed that every phase of life has its cyclic periods, which may be measured and charted with great accuracy, and may be used as a forecast method for future prediction of events (not in any way associated with fortune-telling or astrology). The serious student of BioRhythms will find a great interest in the work and can even create a consultant business with these methods.

As I have already stated, there are three BASIC cycles, the 23 day (physical), the 28 day (nervous) and the 33 day (mental), and since these have previously been outlined, I will not repeat them here. But what about other cycles? The Health cycle may be used to interpret either a good state or a depressive state at any time in the future, but it is not a fatalistic method, for one can combat a depressive period by being extra cautious. Likewise, the most propitious periods for physical and mental activities, such as taking examinations, or at extra strenuous times are when the Red cycle is rising and the Green cycle is at its peak. The best times can last for one day only or for several days, depending on the condition of critical times of the cycles, as shown on the charts.

How often have you heard it said: "This seems to be one of my 'off' days"? Reference to the cycle chart will, on checking, prove this to be correct—that, in fact, the person has an "off day", but by forcing the pace and correcting the mode of behaviour, the situation can be greatly improved. Some readers have already mentioned these things, and have often wondered why these times occur. The calculation of the BioRhythm (sometimes called Biograms) is done with a special method of mathematical computing, which arrives at the correct cycles at any time in life. Once the basic cycles are discovered, one can then trace the whole repetitive process throughout life.

Of course, each cycle can be influenced by other cycles, much in the same way as radio waves are interfered with and can produce a distorted

pattern; so can the Moon or the Sun affect the severity or otherwise of a cyclic period, but the basic work always remains. There are many cyclic periods that one might study.

Georges Lakhovsky in his work "The Secret of Life" refers to the best "wine years" in certain areas, and in that work he presents graphs to prove the point. The testing periods were from 1848 to 1907 and show the effect of Sun, Moon and terrestrial cycles on the grape and similar crops. On the other hand, in "Agriculture of Tomorrow" by A. Kolisko, much trouble was taken to show without doubt that plants are affected by cyclic patterns. Kolisko went to the extent of burying plants in deep ditches to screen them from radiation, and used homoeopathic methods to control growth, but the fact still remained that cyclic periods had their effect. In "The Controlled Animal" by A. F. Sykes, B.Sc., reference is made to animals AND man being affected by periods of activity and depression, and he takes care to show by experiments how animals are affected by "something" (he does not put forward the true cyclic theory) at quite definite regular periods.

One can go on and on with book references of discoveries of eminent researchers, for example, Baron Von Reichenbach in his "Researches into Od, Magnetism and Electricity" (1856); his odic theory has been proven many times, showing that the odic or auric light from things and people does vary at frequent and REGULAR intervals. He further goes to show how "sensitives"—who knew nothing of the type of research undertaken—reacted to these cycles. As a matter of interest, in his day Baron Von Reichenbach was a known authority on Electricity and was the discoverer of petroleum and many inventions we use today.

Just how many cycles are there that we can plot and use? Apart from the three we have already been shown, there is practically no limit to one's work in this field. One can find the best travel cycles and also the times to avoid travel. One may use certain cycles to experiment with telepathy, and so on.

The basic cycles—over and above the three we have given in the previous article, are listed below:

Cycle	Length of One Complete Cycle (in days)
Business or Trade	35
Telepathic	Male 30. Female—15 days.
Spiritual Self	35
Travel (any form)	28
Wealth	Male—30. Female—35 days.

Of course there are many more, but the variation of these cycles will show, in practice, that they DO exist and may be used with confidence. There are so-called "critical" times when some charts will

cross others, either at a depressive or active state. On the active times of cross-charts, this indicates the very best periods for extra activity. For instance, if the physical and the intellectual cycles cross on an apex, for the creative man and woman this is a time for extra effort and ultimate reward; on the apex of two or more cycles crossing as in Trade, Wealth and Spiritual cycles, this would indicate—with regard to Trade and Wealth—an above-average period to speculate in the stock market or commerce.

Once the cyclic periods are known, the next problem that arises is to interpret each one correctly and use them to the best advantage. The whole system is based on the birthdate and time (if known), also—in some cases—on the conception time. For instance, as Mr. Thommen states in his book on the subject, it is quite possible by this method to predict the sex of unborn children. Also, one may use two or more charts to find the compatability between a group of people. Have you ever noticed how some people seem to “wake up” at night and want to sleep in the day-time, or vice-versa? A check on their personal charts will indicate why. There is no doubt as to the activity of these cycles. They can help you to improve your status, your mental and physical health, and in general, make you AWARE that you are living, and that you CAN do the things you want to if you know in advance the best times to attempt them. Yes, the study of cycles, although not the solution to all health problems, can help a lot on the path through life.

If you are unfortunate enough to be compelled to live in a city, make it your business each day to take a morning ride or stroll in the suburbs or country. Fortunately, these days, this is made possible. Underground or surface rapid transport brings you in a few minutes to open air spaces, where on fine days you can get a few moments of the life-giving rays of the sun. Without these you cannot long manifest uninterrupted health. For neither mental nor physical health can be maintained without the ultra-violet rays from the sun. The smoke screen hanging over our cities robs the sun of these health-giving rays. It is the ultra-violet rays of the sun, and not its heat, that make for health. So whatever your situation, make sure of these rays at least a few minutes daily when the sun shines.

B.C.

GROWING AND GATHERING FRUIT BY ELECTRICITY

The title of this short article might well be considered rather strange unless one is familiar with the techniques involved. Let me elucidate. Research into the electrical potential and directional currents in plants was first known in 1854, when a German experimenter by the name of Buff found electricity between a root tip and the upper parts of the plant—not intermittently as in human nerves and muscles, but in a continuous stream of direct current. Others have repeated the experiments, and it has been found possible to detect a steady current in single cells.

In this century it has been found that it is possible to connect a fruit tree to an electric current of a pre-determined voltage and strength, and in running the voltage in one direction the growth and production of the tree is stimulated so much that it is possible to double the size of the tree in any space of time. For instance, if the tree grew 2 inches in one year under normal circumstances, it would grow 4 inches in the same space of time by electrical induction. By reversing the current, it is possible for the RIPE fruit only to drop off the tree; this is especially so in the case of citrus trees, which are well known to hold on to their fruit. Up to the present time, no machine has been designed which can automatically pick this fruit.

If we use Nature's forces, we shall find that sensational things can be done, and if we continue to use these finer forces in the right way, helping them along a bit, much can be achieved.

During the best growing season, I have been continuing experiments with smaller plants, and have found that the amount of electrical or magnetic current required is so small as to be almost immeasurable. If one uses a certain type of metal plate, it is possible to stimulate growth in trees or plants in a spectacular manner, because the plate—by its very nature—produces an electrical current.

Some years ago, I cured a number of ailing trees by the insertion of a selected homoeopathic remedy into the tree itself. I drilled a tiny hole into the trunk and placed a slim glass (not plastic) tube inside, sealing it up within the tree. Another simple cure for a non-fruitful apple tree was found by way of analysis. This analysis revealed that the tree lacked Zinc, and so—after finding the tree's fundamental ray

I gently hammered a Zinc roofing nail into the trunk. Ever since, this tree has borne fruit abundantly.

Now to return to the electrical action of plants. I have found that by using certain Radionic apparatus it is possible to "beam" the required energy to the plants and thus stimulate growth.

Some time ago, a Canadian fruit grower claimed that by using certain magnets (specially made for him) and a number of overhead aerials, it was possible to protect large areas of fruit trees from frost, with no heating or devices. No further literature on the subject has been forthcoming, but we are always investigating the possible phenomena connected with this interesting feature.

In my opinion, what we really need is a number of interested farmers or horticulturists in all parts of the world who will take a little time off to study these phenomena. If a sufficient number of these forward-looking men and women did investigate this interesting and worthwhile field with zest, I am convinced that they would find satisfaction and a rich reward. However, patience, time and energy are required to do this, together with enthusiasm and ideas for constant improvement. And, in order to evaluate the progress, records would also have to be kept. I wonder if there are enough readers of this magazine sufficiently interested to forward this inexpensive but important method of research, which will not only save time and labour, but will give production a boost where needed and will also provide a life-long interest.

"This Odic atmosphere which every man has about him, and which emanates from every living individual, is not completely similar in every case, but differs somewhat in the case of each, almost as perfumes and flavours differ, as light falls into different colours, and as sound into octaves. A woman's differs from a man's, and a young man's from an old man's; it differs in the sanguine temperament from the choleric, and in the healthy from the sick, and taking those who are sick, it differs in the case of catarrh from that of one who has scarlet fever, or typhus fever with its calor mordox etc., and all these differences are perceived and distinctly recognised by high-sensitives, and in many cases by often medium sensitives."

From "Letters on Od and Magnetism" 1856 BARON VON REICHENBACH

RADIO-RHYTHMIC CYCLES

In the August issue of 1961 of the Journal, I referred to a system of bio-rhythms which is a system of following one's own personal fluctuations to the extent that a corresponding forecast can be made in advance, and in such a way that depression periods can be accepted and rectified as much as is possible.

The science of bio-rhythmic periods is briefly the study of the variations and periodic fluctuations in living things, and can equally apply to animals plants and mankind . . . irrespective of structure, type of climate.

However, we can go much further into these periods and find in some cases exterior relationships with the Universe. It has been accepted for many years that we have some connection with various stars, and this is accepted as Astrology. For many years, I could not understand how the fact that we are born on earth, and what it has to do with stars outside the earth. Furthermore, how can these affect our lives **TO THE MINUTE**, as is claimed in the science of Astrology, especially as *time* as a substance does not exist, or rather exists as a past, present and future in one, as demonstrated by W. Dunne's "Theory of time" and similar works.

We like to look at Astrology as a precise science based on our own knowledge of **TIME** study. In fact, no such accuracy exists in the Universe, but what **DOES** exist is the radiations from general space coming from all around, and in many ways affecting our lives, but rather differently than we like to think.

As we know in Radiesthesia, every single being is constructed by radiations in the form of cells, blood, muscles, etc., and that some are affected by exterior rather than others. In this way, our Bio-rhythms are changed into Radio-rhythms, or the effect of so-called "radio waves" on the individual, thereby upsetting his/her normal radiation patterns. This does not happen all at once. We are controlled by it throughout our lives, as will be shown in the many extreme cases where excess sunspots cause certain crimes in excess, and in the pattern of accidents and the like. These always follow a given pattern, and much of this is due to our own bio patterns being upset by "radio" waves from space.

In Astrology, we are told that we are all classified under our own stars or systems, and this is further complicated to the extent that it all depends on the time and day that we were born, and many say to the second. If this be the case, from what time, if any, can the calculation take place, since it takes time for birth in the first place? Of course, the possible errors due to global situation, difference in times etc., are

taken into consideration making the permutation even greater. So, we are not able to say that ALL Pisces are of identical pattern, although it is said that there are similarities. But, I have observed that there often is a great deal of difference in people of the same "star" born of the same timə—why this difference then ?

Now, my observations and hypothesis shows that, conversely to our beliefs on Astrology, we are all made the same, but that we all have particular PERSONAL traits and radiation patterns due to our living standards, and the bio periods in our lives, but what is different is the effects of universe radiation on the individual, and it affects one type of person more than others. If we like to accept this fact, then there is a good basis for finding out more of the radiation fields of individuals, and by so doing, find in advance their bio or radio periods of depression or otherwise.

It is hoped in the coming months to work out a chart for use with existing Radionic instruments which are capable of assessing everyone's own frequency of these radio-rhythms, and to what extent it affects the daily life of a particular individual. By assessing in ordinary levels, it is not at all possible to arrive at *exact* specification of this cycle.

The cycles of radio and bio-rhythms are more or less regular in the particular person, since they are affected at regular intervals by exterior forms of radiation. No doubt, one has heard how one's life is controlled by 7 year periods—this is not quite true, since the periods are eleven year periods controlled by the Solar activity rising and falling from sunspots, and later from reflected radiations from the planets etc. Not only this, but a study of astronomy will show that past Universe explosions and similar occurrences do affect the individual and, in some cases, where individuals are in close harmony, to upset this harmony a great deal to the extent of war between nations, or differences between otherwise happily adjusted persons.

It is also known that cases where the mental balance is not entirely working correctly, that upsets occur in mental homes every 11 year period, and in sub-cycles determined entirely by the structure and sensitivity of the person to exterior radiation.

No doubt, as the research on this important subject goes still further, we might be in a position to forecast with accuracy the personal radio-cycle of every applicant. The study of this interesting aspect of radiation is most fascinating and ultimately rewarding, inasmuch that it gives us a better understanding of our fellow men, and into the possibility of character alignment as to suitability for certain persons for certain jobs, or other positions in life and to explain certain illness etc., the prospects are very great in this field of research.

In order to clarify this form of research from ordinary bio-rhythm research, we might call this X—rhythm research for want of a better name for it.
