

Emissions from forms.

Interview with Jacques Ravatin

28 May 2011

Jacques Ravatin passed away in March 2011. It is through this interview from 1978 - below - as we discovered. It was the continuation and synthesis of a long line of researchers and pioneering scientists, both practically and theoretically studied the links between the visible and the invisible, their implications and the possibility of change of consciousness. His work remains relatively unknown and it is unfortunate that several wacky are inspired. Ravatin continued his work with his foundation Ark'all and published many studies, sometimes under the pseudonym Vladimir Rosgnilk. His theses are to be checked by a wider community of researchers ...

(Psi Journal International. N ° 7. October-November-December 1978)

A new approach to the universe ... A Joel Andre reporting
If mathematics, architecture and aesthetics bring countless descriptive and analytical data on forms, no current science does not seem yet the fundamental problem: "What are forms?". And above all: "What are the forms?"

In 1930, André Belizal and Chaumery engineers and Morel nevertheless addressed the issue and resulted in a kind of conciliation between dowsing and electromagnetism, the notion of waves form.

A second generation of researchers, including Enel archaeologist, and John of the Foye and Roger de Lafforest, repeated the results of the pioneers and accumulated experimental verification. the exact nature is still unaware of these "Shape Waves", but the influence of these mysterious

fumes from the plant and the living could be reproduced from artificial emitters detected by sensors and used for specific purposes.

The interview that follows evokes, of course, these preliminary steps without which the current research would remain incomprehensible. Without linger, however, and for two reasons.

It is not desirable to give too many practical details of the experimental apparatus used in this field. Their apparent simplicity conceals formidable potential that the enthusiastic beginner (as sometimes experienced researcher) may discover to his cost ... and those of others!

More importantly, the ongoing work of the Group ARK'ALL constitute a revolution of sorts with the past. We no longer speak of waves form but Emissions from Forms. Why ?

Because we did not do in the waves, or electromagnetic spectrum, nor those of any other known vibratory system. In short: Emissions from Forms are not in our physical Universe ...

many others about "unsustainable" will be found throughout this interview with Jacques Ravatin. The ancient Initiates they were conversing with the Gods? The Hebrew alphabet he conceals a latent state of all reality? The Pyramids, statues of Easter Island and the Cathedrals they are all gigantic transmitters? And by that same vehicle towards what the relativistic time diagram refers to as "Other"? Yet would it a Elsewhere ... other than physicists. Our physical universe would be a restriction of the real universe, Global.

We can not remain indifferent to what Jacques Ravatin as they concern the most fundamental aspects. the knowledge. And more immediate issues such as housing, the environment, medicine and Future Technology. Even on these themes civilization will show that the formulations defy all our habits of thought.

But then he had to publish these words, or was it too early to do?

One of two things: either the claims of Jacques Ravatin is accurate and the research of his group are poised to revolutionize modern science. It would be unforgivable to impede their dissemination and their discretion by all. Or they come from exaggerated enthusiasm and a total lack of scientific caution, in which case, as the saying goes, they are those of the author, his good faith and his academic skills. In one case as in the other, Jacques Ravatin has seemed able to take responsibility. His academic career (after a PhD in mathematical physics, he taught this discipline today at the University of Amiens) does not leave the meeting without the controversial plan. His experimental practice (he was also a chemical engineer at CNRS) lets hope he has kept his eyes open during its investigations. The assurance with which he intends to operate the main physical and chemical transformations known by entirely ignored way of our laboratories would be senseless if it was based on a verifiable acquired. The theses and patents are increasing elsewhere around the Ark'All Group and private industry already grants them considerable support.

But suppose that the words that follow fall only extrapolations unfounded or actual observations but hastily generalized, short of an abuse of interpretation. It would still be necessary to read and reread. Einstein said it not having collected some major ideas of his theories on reading ... of science fiction!

Question - Joel Andre: Given the unusual area we will address it would be good to give an idea of your scientific background and the basis of your present research.

Answer - Jacques Ravatin: By the end of high school, I was concerned about the existence of unknown realities of classical science. I thought some phenomena were part of a different approach.

I began looking for what I call non-Cartesian systems. In academic circles, the opinion on the existence of such systems were very mixed.

In 1965, my mathematical physics thesis, I showed some great problems of physics were justifiable other reference systems, other approaches than those used so far.

Jury thesis was chaired by Prof. Depommier, now director of a large physics laboratory in Montreal. He was very interested in the concept of non-Cartesian systems and encouraged me to continue my research.

Desiring to deepen my knowledge of mathematics, I worked a long time on very special algebra. Then I began research at CNRS

I kept thinking to non-Cartesian systems, until I heard Roger de Lafforest, during a television program about some research on shapes and unusual effects on living beings.

R. Lafforest mention my theoretical research as likely to clarify the results obtained by several researchers, including himself, experimentally. So I contacted him and he allowed me to get acquainted with the work due to André Belizal on what was then called the "Wave Form". He made me discover among other curious properties of an Egyptian form called "Luxor", the one found on the protective ring of Mr. Belizal was named "Atlantis Ring."

The unsuspected properties of shapes gave me access to one of these non-Cartesian systems which I had sought so long a real example. Meanwhile, pioneers like Turenne, of Belizal, Chaumery Enel and scholars of the second generation such as John of the Foye and R. Lafforest had many experienced and reasoned by analogy. Returning to their results in the light of non-Cartesian model that I developed on the abstract level, we could finally move forward and know what aspect of the real fell the enigmatic influences issued by Forms.

Shape "Luxor". She was on a ring in black sandstone found in Egypt towards the end of the XIXth century.

A. Belizal had seen the effects of this ring on various aspects of his daily life, the physical and psychological level. This was the origin of his research on what he called later "Wave Form".

According to Jacques Ravatin, this ring compensates for the adverse effects of certain Emissions from Forms. The archaeologist Carter wore during the opening of the tomb of Tutankhamen in 1922. He was the only survivor of the wave of unexplained deaths that struck eighteen people closely associated with the excavation of the Carter-Carnarvon mission, that that led to the invention of the pharaoh's tomb and the famous treasure. Researchers would have been achieved by harmful emissions due to the displacement of funerary objects: the provision of these in Egyptian tombs responds indeed to notions of balance of shapes and very particular arrangement can be upset without risks.

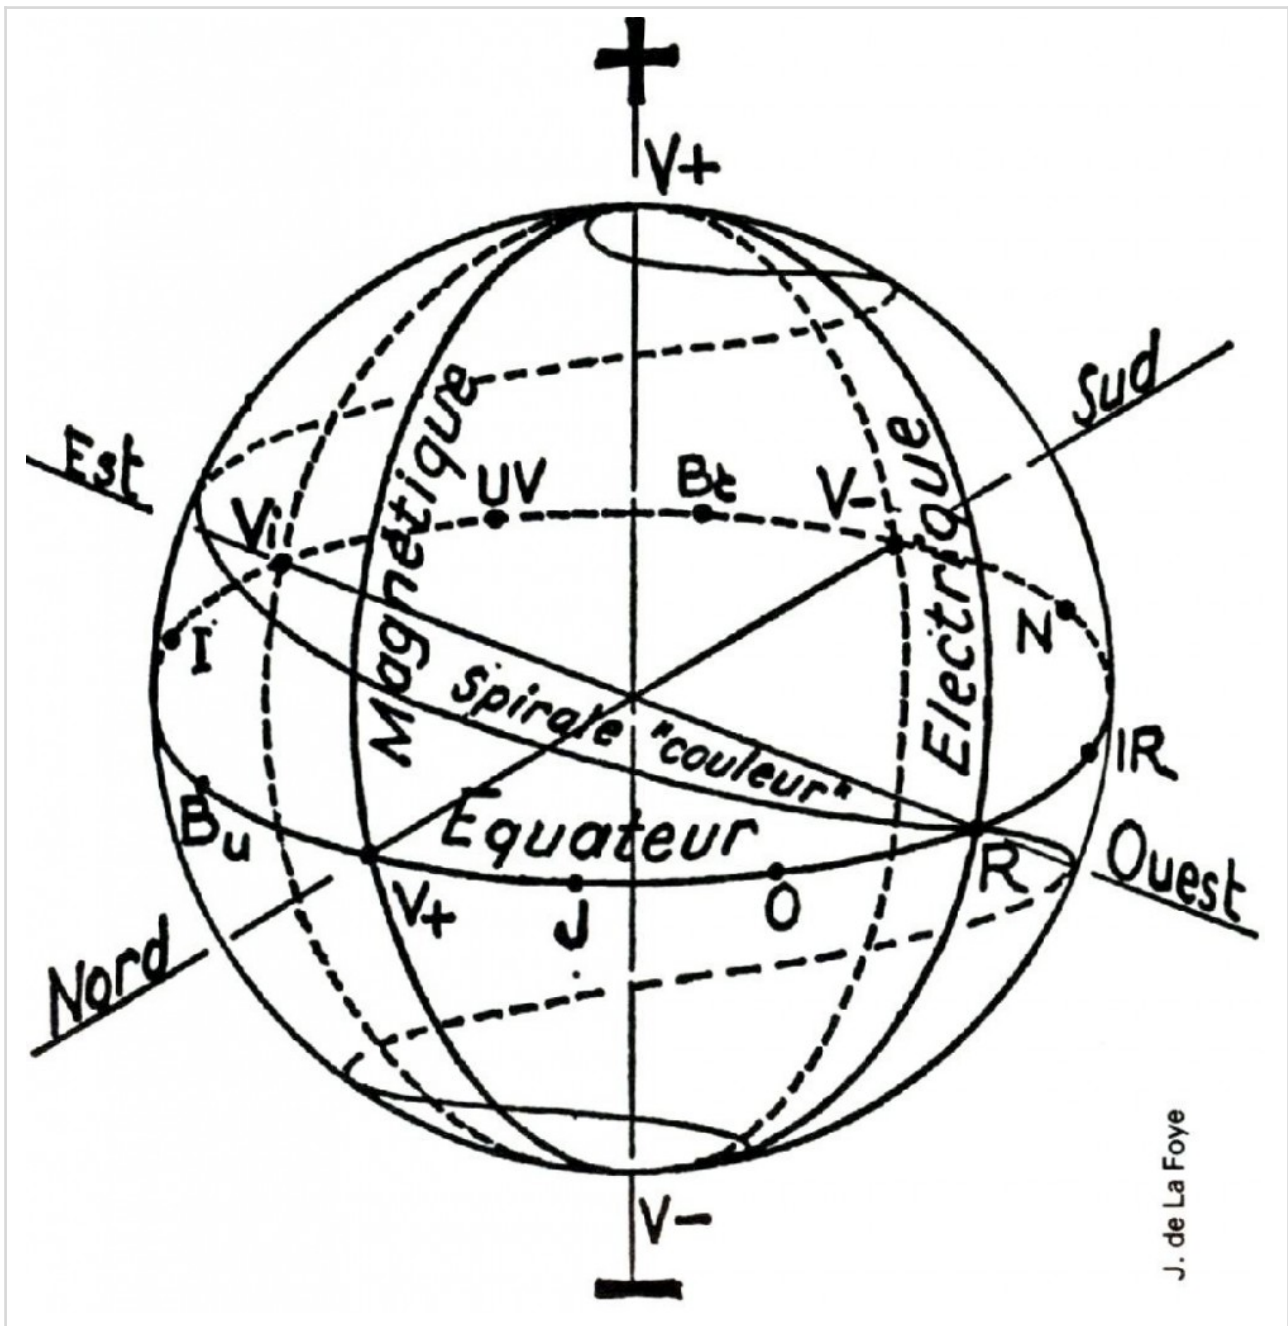

Q - Can you, in a short history, relate the main stages that have marked the evolution of the problem to its current form?

R -For what follows, we must first deal with an argument too familiar when we talk about dowsing. The use of the pendulum is indeed disputed grounds that his gyration is due to imperceptible muscle movements, conscious or not, from the subject that manipulates.

Now, in 1850, Baron Reichenbach had developed a type of pendulum that excluded muscular action of the subject. This is a pendulum whose wire, at a certain height, is wound a number of times around a fixed cylinder. The subject had no other contact with the pendulum than the end of the index placed on the wire at the winding cylinder. The intervention twitching, even important, was thus excluded, which did not prevent the pendulum come into gyration by the usual rules.

After this indispensable precision, I turn to another experiment also due to Reichenbach and directly related to what interests us. On the positive side, facing north, a bar magnet, was placed a wooden cylinder. We then asked a clairvoyant, placed in a dark room, to focus attention on the cylinder. After one hour, the subject saw appear around the circumference of the cylinder a color wheel arranged in the order of the light spectrum that we know in optics.

Around 1905, Colonel de Rochas had also discovered various experiences emissions do not belong to the known electromagnetic spectrum. These experiments were repeated and developed by engineer Turenne in 1928, then with Belizal, Chaumery and Morel. The same issues were identified and as was the golden age of the applications of electromagnetism, the researchers that I have just mentioned have tried to reconcile their findings with the prevailing theories. So they called emissions-control color names from which the pendulum came into gyration and they distinguished two aspects of these "waveforms" magnetic and electric. It was thought at the time it was an unexplored band of the electromagnetic spectrum. We now know that the so-called "waveforms" are not waves and do not belong to electromagnetic fields. That is why we are talking now of the "Emissions from forms."

The "decomposition of the color spectrum by the sphere" according Belizal and Chaumery. Abbreviations are as follows: G = green; Bu = blue; I = indigo; Vi = purple; UV = ultraviolet; Bc = white; N = black; IR = infrared; R = red; O = orange; Y = yellow.

Diagram of Jean de La Foye, published in his book " *Waves of life, death Waves* ".

Q - Before seeing how you came to that conclusion, can you give an overview of how the pioneers that you mentioned have somehow "cleared" the question?

R - No conventional detector being sensitive to issues we are discussing, and Chaumery Belizal used the dowsing method, also added some significant improvements.

On a wooden sphere, they tried to locate the pendulum transmitters points of what they called "waveforms". The method was that of the "control" classic dowsing. An example: hold the left hand a piece of cloth or red paper; of the right hand, start the pendulum oscillation in straight above the sphere. To the vertical of a precise point, the pendulum between gyrating. The point is thus identified said "issuer" of the color red. Depending on the direction of gyration of the pendulum, "color" is said to be negative or positive. It will, for example the North pole of the sphere an emission point by rotating the pendulum to a green tissue-control and in the direction of clockwise: this receives the name of Green positive or V +. The diametrically opposite point receives the name Green negative or V-.

Chaumery Belizal and found that the points-colors were distributed to the surface of the sphere as regular spirals experiencing a lag depending on the movement of the Earth. To "fix" the position of these spirals, they had the idea to drill two diametrically opposed holes on the equator of the sphere.

Q - The preliminaries are behind the ingenious "universal clock" that was used to study many properties and effects of Form on current or antiques ...

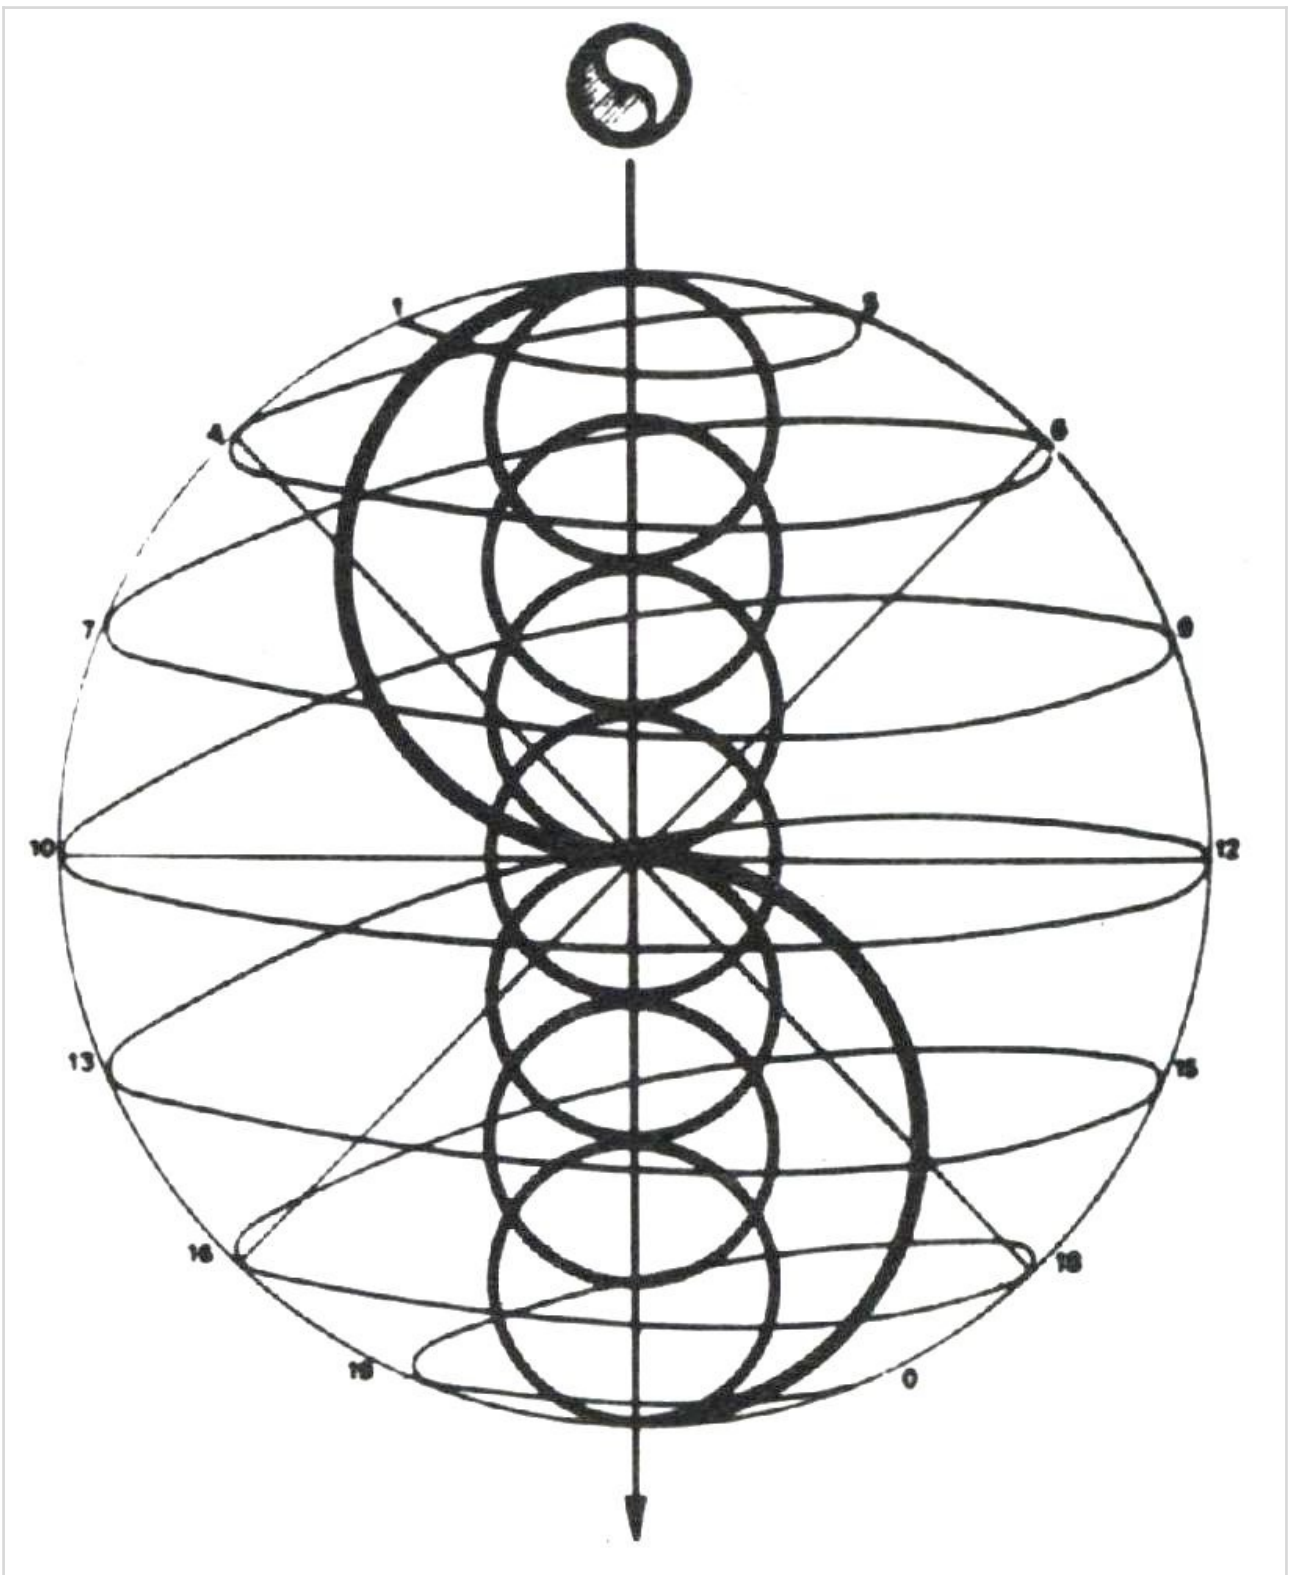

R - The universal clock is in fact constituted of a wooden spherical mass on which are shown the color-points identified by Belizal and Chaumery. The slide wire on a movable handle attached to the pendulum and can thus be set above the desired transmission point. The turning will occur at the vertical of an object according to the emitting characteristics of the selected point on the transmitter clock.

This is a very useful tool, as the pendulum equatorial developed by the same authors. And the achievements of the first researchers have not lost their practical value. Simply

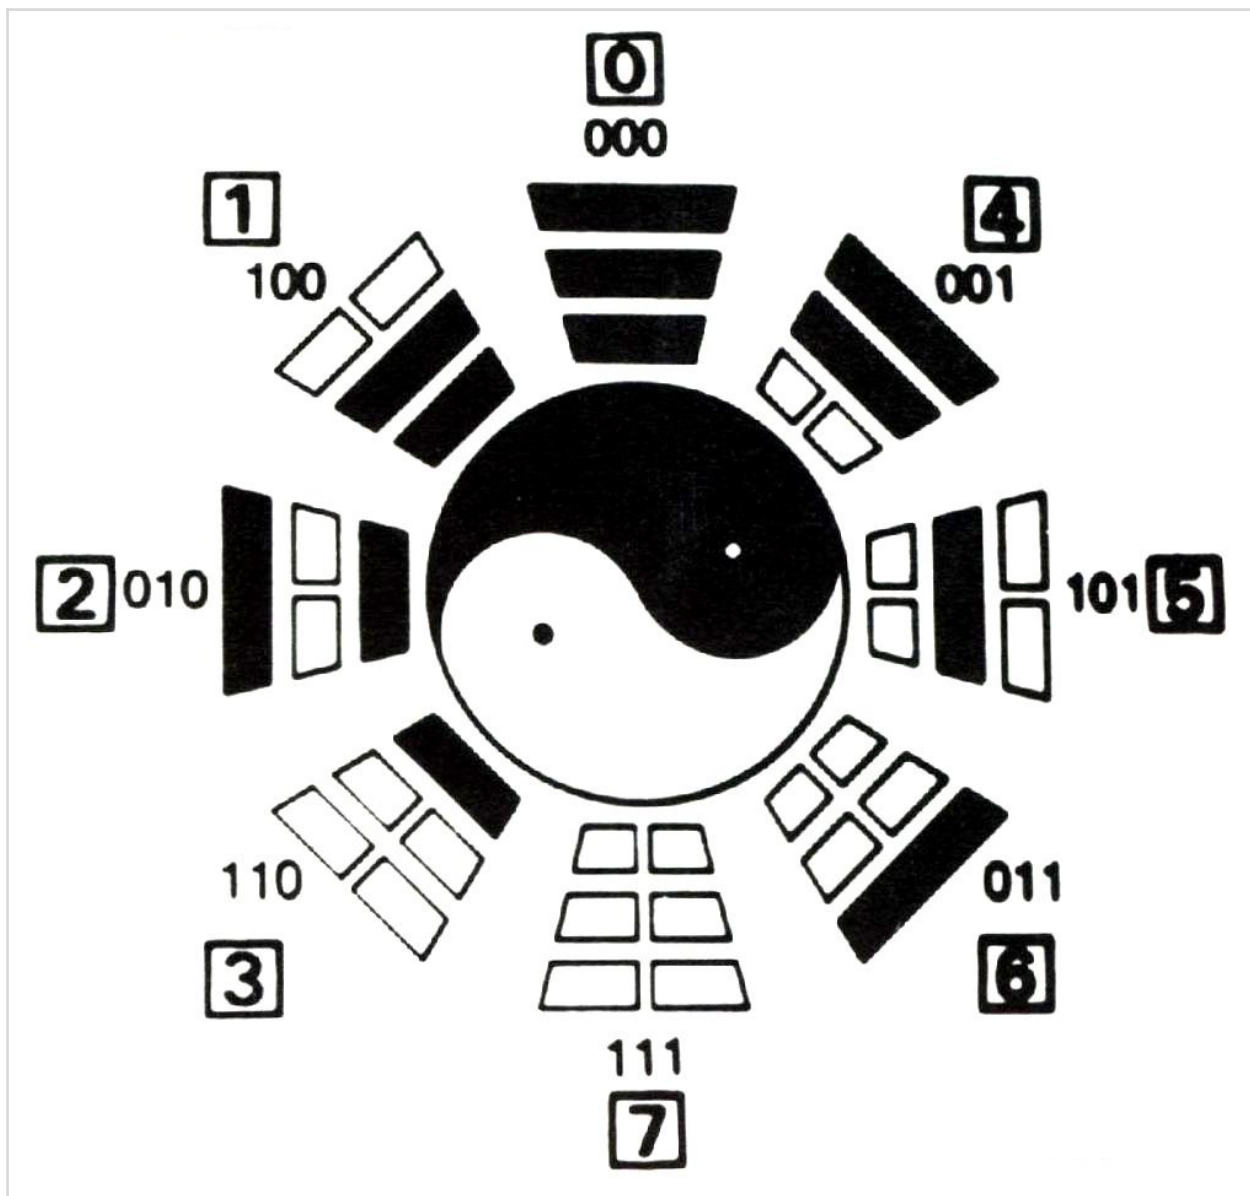

terminology was inadequate and identified emissions belonged to a restricted field, including our current investigations continue to account under the name of "Field of Taofel Belizal". What must be understood if we want to access current research on Emissions from forms is that they have nothing to do with what we know as of waves or vibrations the "colors" issued by various points of the sphere or other solids are of a different nature than the colors perceived by our senses. They do not belong to our physical universe.

Q - How did we move concrete research and electromagnetic or chromatic analogies with infinitely more abstract designs that you support now?

R - I think the Enel research was decisive. Before you even be interested in Emissions from Forms, Enel was initiated into the esoteric doctrines of antiquity. It was probably the first to understand that the powers of Forms fell a thinking radically different from ours. Instead of turning to the scientific criteria of the moment, he considered the problem from the perspective of the Hebrew Kabbalah and large cosmological systems of India and ancient Egypt. This allowed him to deepen the sense of the sacred architectures that are, for the materialist thought, rigorously incomprehensible. Enel was also one of the first to suspect the relationship between emissions due to Forms and cancer. He even discovered a Issuance acting on cancer cells, which we call the Cancer Issuance of Enel.

Placed on a properly drilled wooden disc and oriented, this figure kabbalistic, called Synthesis, generates Dynamic Emissions whose effects are remarkable on living and water.

The Pa-Kua, figure combining Chinese Yin / Yang circle and trigrams of the I Ching. It emits emissions in the Champ "Belizal" and other character in "Möbius". Although possessing therapeutic properties, it is a delicate job: overhaul "KSh Ph" or Magic, the effects are unexpected and powerful.

Q - We now come to your most bold assertion: Emissions from the forms do not belong to our physical universe! On what is this belief?

R - the same point of view of science, the essential condition for the knowledge of the Universe is that we can always and everywhere to give one or several landmarks: distance, speed, time, force, etc. Until we can address the phenomena in the context of a system of benchmarks, we have the ability to analyze, to name or count to measure or compare.

But does not he in the universe areas where pins themselves become unstable or disappear?

We discovered the existence of such systems, the realities for which standards and benchmarks fade or are completely lacking. The physical universe is therefore one aspect, a particular case of a wider area. Our physical universe is restricted what we call the Local, since one can always locate an object. As for the total universe, one where pins Local disappear, we call it the Global.

There are intermediate areas between the two sides of reality, passages from Local to Global and Global projections in the Local. The transitions between these two realities are none other than our famous "Emissions from forms."

Q - So the field of Emissions from forms would be where it is still possible despite the benchmarks evanescence, to understand what happens to the incomprehensible even?

R - This is a kind of compromise between the Global, in which pins are dissolved and the building in which pins are everywhere.

Q - This is a considerable extension of the concepts of the era of "Wave Form". Does she experimental practice known also significant variations?

R - We build emitting devices much more powerful than Belizal and Chaumery and we amplify the emissions by electric tensions increasingly high. But current research, for detection or analysis, we always use the universal clocks, equatorial, etc. We also have clocks to determine the polarity of a Form (if any) and especially "Hebrew clocks" for some basic qualities that we call states.

This concept is crucial because some deemed beneficial Emissions can have a disastrous influence only because they are in a bad state.

Q - Can you clarify this new concept and the methodology used to highlight the state of emission?

R - In physics, we define the state of an object by its position and its speed. But since Emissions from Forms are outside the physical realm, their various characteristics do not match the criteria of the Local. Despite the relocation, certain differentiations are possible. We can distinguish the quality levels of Physics, Vital, the Psychic, to name only the most simple categories. This method does not, as it might seem, of metaphysical presuppositions, but the properties of the Hebrew language and alphabet called "Hebrew square."

Contemporary alphabets are sets of purely conventional signs, but it is not the same ancient alphabets which each sign was carrying a latent power in conjunction with the different cosmic aspects that writing was intended to reflect and 'influence. The power of each sign was capable of amplification, activation, resulting in the possibility of using hieroglyphics, hieratic alphabets and sacred names to penetrate the secrets of real states or access higher states of consciousness. We check every day the power, efficiency, these symbols that also must be handled with caution.

Among the various hieratic alphabet, that is to say sacred, Hebrew square is probably the one that has survived in its most authentic form, the less degenerate. It is probably for this reason that the characters and the Hebrew words written using this alphabet are so sensitive to the qualities and differences that our current thinking has been lost from sight. Among other things, the different "states" that can take the Emissions from Forms.

Six straight, including five in Hebrew characters and the last (bottom right) for detecting transfers between forms and forms systems. Circles are the symbol of "Life Node". Important Issue of Vital Field that we mark on a plant at ground level and in a human the umbilical plexus.

The method is to burn a cylindrical pendulum called "pendulum Hebrew" the word describing a particular state. The Hebrew word for "earth" interacts with the states of the physical, the word "Breath of Life" reveals clean States Living, the word "Spirit" means those psychic or spiritual, etc.

J. de La Foye

The main Hebrew words used for the detection of states. They allow you to locate the intrinsic qualities of the reality studied. We can in the same way to highlight states like "Word", "Night", "Light", each Hebrew word attached to the pendulum reacting the latter when the state symbolized by the word is present in the object or the phenomenon being studied. At a very simple

level, this method also cuts the results of classical divination: the pendulum bearing the Hebrew word "welling-It-of-water" respond positively to the vertical of a tablecloth or source underground.

But we can detect far less familiar States, much less simple to define, even if the power of their effect leaves no doubt as to their existence.

The word "KES Ph" defines the state "Magic" and characterizes indeed situations where pins are upset, especially when we are dealing simultaneously with the state "knocked Shin" which involves anti-human influences very ominous.

Q - How is this reflected in our reality?

A - There are many varieties of the State "KES Ph." We identify on some Egyptian statues with arms crossed on the chest, on misguided pyramids on musical instruments such as violin, etc. Modern buildings, important technological complexes often testify to that State, which can also come from a work of art, music or certain about. A Hitler speech manifests as a State "KES Ph" with Shin Reversed.

funerary statuettes. Like all Egyptian forms, they contain unsuspected potential and are moving with caution. Let's see how that state affects Emissions from Forms. Take for example the so-called Issue V_{-M} which belongs to the field of Taofel "of Belizal". It intervenes in particular on the human body in the nervous system. In the normal state, the V_{-M} dispels

fatigue and different voltages, regenerates the metabolism of the nerve cell, etc.

But if this emission is distressed state "K Sh Ph" with "Shin reversed", it induces a deep anomaly situation, magical, and anti-human effects (Shin normal position being the criterion non essentially disturbed human).

What will happen then? The state "Magic" disturbing all the usual features of the everyday world and the "Shin" deeply upsetting reversed consciousness of the outside world, the subject no longer overpower, or very bad, its relationship with material objects and the overall situation . Suppose it is affected by the abnormal emission while he is driving his car, the vehicle leaves the road for no apparent reason and it will be the "inexplicable" accident.

You see that the emission beneficial origin may be affected by the state in which it takes effect.

On the strings of the violin, the Hebrew pendulum detecting the state "K SH Ph." This state is identifiable above all violin, played or not. It disappears if we remove the "soul" small piece of wood on the inside of the soundboard and that seems to be causing the "magic" character of the instrument. The big makers of old sewed the "soul" of their violin from the bones of children died at the tender age.

Q - How to avoid interpretation errors due to the subjectivity of the researcher and the state of his psyche or the place in which it operates?

A - We have countervailing that eliminate accidental influences surrounding objects, the basement of the building itself, etc.

As for subjectivity, when there is any doubt, we study the phenomenon in question by two, three, sometimes up to fifteen different researchers. Each works separately and then we compare the results. When matching, we consider them conclusive, according to the same principles of experimental science.

This form is an atmosphere Rebalancer provided you know the drill to enable Ext. With a range of 60 m, it removes harmful emissions from the Field "Belizal" as the V^{-E} .

Q - Are you planning to eventually replace the various clocks by sensors or recorders of the type used by existing laboratories?

THE MINISTER - It is not excluded, although no artificial sensor can not match the sensitivity and human intuition. The pendulum promotes wakefulness of these latent qualities and everyone is convinced, after three hundred hours of practice about, the merits of this instrument.

As for me, my scientific training was rather used to the models and methods of modern physics. Research pendulum seems neither less safe or less stringent. We will also soon detect Fields Taofel with new properties that we discovered on the crystals.

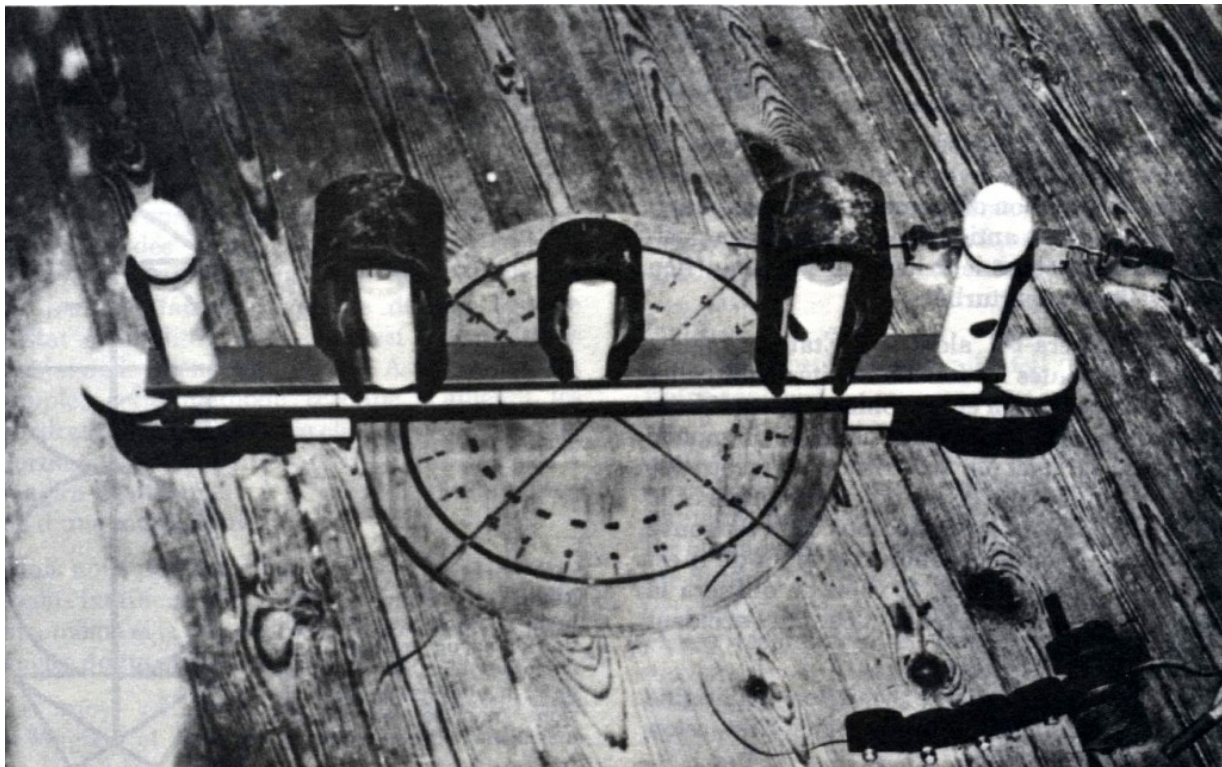

Q - Let's talk about these fields Taofel that expand the field of Emissions from many forms beyond that suspected Belizal and Chaumery ...

R - The discovery of new fields Taofel was due to the realization of new transmitters, such as that built a year ago and through which we detected emissions far beyond the field "Belizal". The one we will build even more powerful and we create opportunities which I will not speak for now.

The field Taofel immediately above the field "Belizal" received the name "Unity Sprink." Sprink was built in 1934 a device giving Emissions of this level but he never knew what was due the effects of its appliance. Recently, we were asked to study the device in question. This is an octagonal timber frame provided with spark gaps, electrically energized and grounded. Nothing very complicated but the effects produced are remarkable.

Sprink, who knew nothing of Emissions from forms, had seen by the greatest scientists of the moment the possibilities of his instrument. Rocks brought to 700 ° and exposed to the device exhibited hexagonal impressions "honeycomb". Sprink had also

submitted the staff of several plants to the action of the device. The invigorating and soothing effect was immediately felt by all.

transmitter disk topped oriented forms and magnets. Allows various extensions of fields Taofel.

By testing the machine myself, I spotted a very powerful Issue V^{-M} . I decided to build an enhanced version of the invention of Sprink.

The octagonal wooden frame was replaced by a 16-sided polygon, the voltage was considerably increased, etc. Then we identified, beyond the V^{-M} , another type of emission, much purer. It is this new field we call "Unity Sprink."

The ancient objects can also cause a similar discovery. The Ark of the Covenant emits Fields Taofel very high, beyond a "Unity Sprink." We baptized Fields Taofel "Promised Land".

Q - Do you know other fields Taofel beyond "Promised Land"?

R - Certainly. Even beyond the field we considered the highest and that we called "Entity-God", we were surprised to discover a field Taofel even higher. We had been too enthusiastic baptizing the previous field!

In addition, each field has Taofel extensions in a type called Emissions Emissions Dynamics. We can overlap the different fields and emissions, so the possibilities are endless.

Q - What can we say that Taofel field is higher than another?

A - The Champ "Belizal" for example, produces effects accessible to the gradual and indirect observation of plant growth, health improvement, etc. With the highest fields, we act directly on the structure of matter and the physical constants. In the field Taofel "Unity Sprink" we already get variations in the values of the components of the magnetic field, changes in the gravitational constant, the air refractive index, the solubility constant chloride sodium or other salt in the water ... in short, the powerful Emissions from forms in the fields of high Taofel, modify or disrupt the main known constants in physics and chemistry.

Q - You find out the possibilities of objectification as accurate and as those of exact sciences?

R - Absolutely. We measure the action of Emissions from shapes on quantifiable and recognized by all parameters. The physicists themselves are not something else. For example, we reduced the gravitational constant G a tenth of its value. But our machines allow us ignore effects of the current physical and that cut probably misunderstood alchemical knowledge to date. We now know that the alchemists, more or less intuitively, subjected the material to Taofel Fields of increasingly high, adding in each transition principle properties for working with living structures and psyche.

Similarly, instead of adding energy in a given field to change the characteristics of the object in it, we leave the subject of his field to reposition in a higher field ...

Q - You transfer the object in what we might call a "Field of Transmutation"?

R - sort of. This is why we use special arithmetic according Taofel field in which we want to immerse the object.

These arithmetic are called "in-Cumulo décalaire". They are based on the properties of numbers considered entities provided with a given coefficient of existence or non-existence. The real power of these arithmetic is demonstrated by the following fact: just write the Taofel appropriate for a given field of arithmetic, the field in question appears immediately. Similarly, if we build arithmetic corresponding to a human being, any permutation or inversion of the terms of this arithmetic will have significant effects on the individual.

Q - We find the concepts of Kabbalah. But you have not yet alluded to so mysterious forms that are mummies, pyramids, statues of Easter Island and other cathedrals ...

R - To understand the mummies and pyramids, he must appeal to the notion of Ext. The Ext a form is not included in the Form itself is a transition between the shape in the Local and the same form delocalized. For example, by drilling a few holes in a solid sphere, we add new properties disproportionate to the object itself or the banality of the intervention. This reality of Form, beyond its physical substrate is what we call Ext.

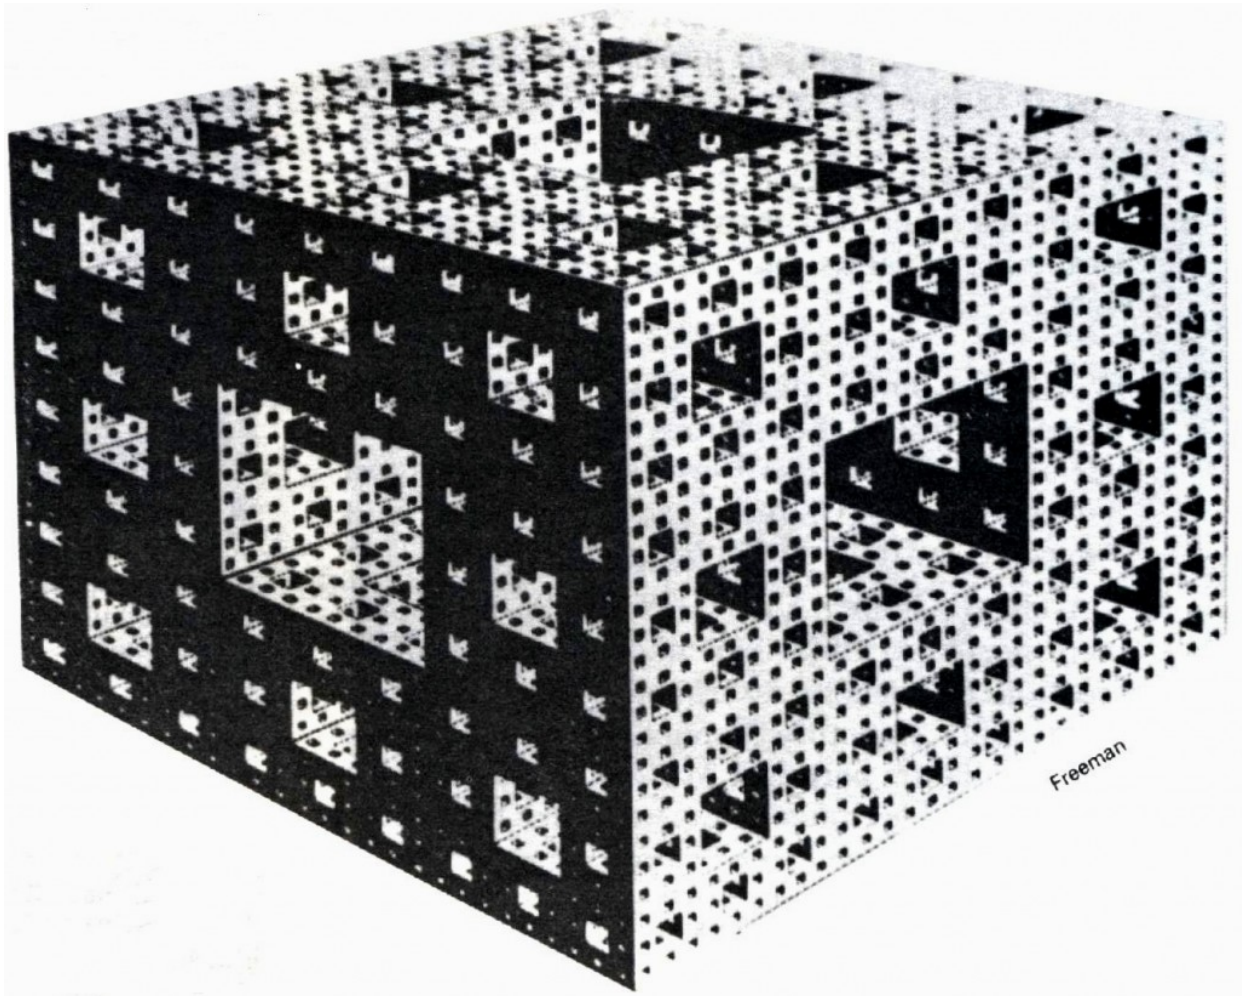

When someone dies, that is to say is delocalized over our world, Ext his remains in relation to the body, as well as the individual relocated. Thus preserving the body of the deceased, it retains the possibility to act on his Ext and thereby on the deceased. That is why in some tribes, mummies participate in collective deliberations. The Spanish conquistadors even observed in South America marriages where the spouse carries a mummy instead of his wife. The pyramids, at least the great Egyptian pyramids, Ext also offer connecting the Champs Emissions of the Pyramid of the heavenly constellation located vertically above the monument. Constellations are forms and emit extremely powerful dynamic emissions. The Ext the Pyramid captures these emissions and passed the Champs higher Taofel. If someone knows how to place dynamic duality Ext with the Pyramid, extraordinary possibilities available to him higher states of consciousness, relocation of the material, access to other real and other universe, communications with quasi-divine beings who are "broken" Global.

Each location of the pyramid, spectrographic readings differed completely from hour to hour! The mathematician recognized that given the precautions taken and the quality of material used, the variations observed were incomprehensible.

Q - What is the "vehicle" that allows these crossings spatio-temporal barriers, limits our dimension?

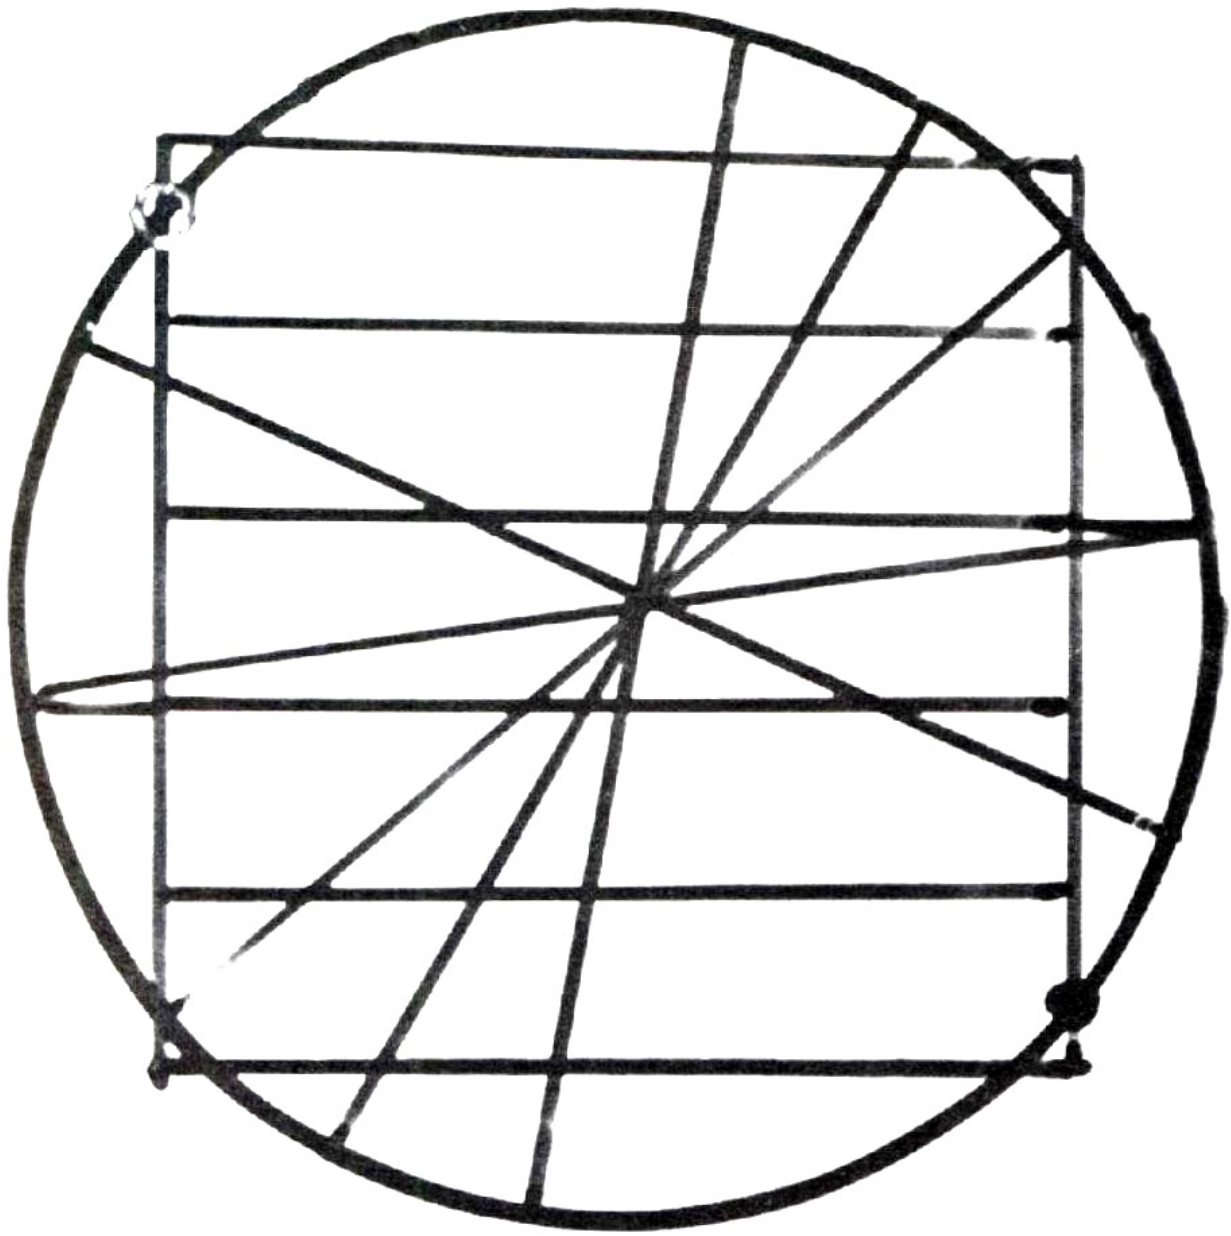

R - We use the concept of Fractal Object, which was introduced at the end of the XIXth century by the great mathematician Georg Cantor. This is initially a figure that can never be completed because its layout requires an infinite number of modifications to the initial figure.

We found that sending a Broadcast Champ "Belizal" on a fractal object, we did go to the next field, "Unity Sprink." We have extended the concept of fractal object in all systems subjected to emissions from forms, and allow us to move constantly from a field in the upper field. Here we have the "vehicle" or gateway that provides access to the Champs Taofel more immediate to the highest.

A fractal object, in the mathematical sense. Its dimension is intermediate between that of a surface and a volume.

We build ourselves Fractals Objects. Our arithmetic to cumulonimbus décalaire allow us to impose structures different space-time of ours. In nature this is what happens to the famous Bermuda Triangle where objects appear Fractals probably generated by the rotation of the Earth. The Fractals Objects can have an input and output, input only or neither one nor the other. In the Bermuda Triangle, most Fractals Objects have no exit, where some disappearances.

A Fractal Object (in the sense of the theory Emissions from Forms).
Enables the essential transformation process of various substances.
Turns Taofel the fields in each other.

Q - Can you cite a case of transition to elsewhere via a Fractal Object?

R - Sensory we work with have made numerous duplications to bygone eras or inaccessible locations.

Samuel Franeric accomplished duplication to discover what became the Great Pyramid during the passage of a given constellation.

We learned that the high priest was relocating it and entered in connection with the thinking Forms Global. So not lying when

he said he had "spoken to the gods." And that's the dynamic duality between Ext High Priest and that of the pyramid, on the one hand, between the Emissions from monument forms and dynamic emissions of the other constellation, which was the subject fractal making possible the relocation of the High Priest.

L'Arche de l'Alliance dans le S. des Saints .

The Ark of the Covenant, represented from some biblical descriptions. In the United States recently, a physicist and his

Q - All monuments and Alumni cult objects they Fractals are objects in the sense that you hear?

R - Or rather they become under certain conditions. the Easter Island statues, for example, are depolarized forms that become Fractals objects if they are viewed on cloudy sky background. The Ark of the Covenant is not strictly speaking a Fractal Subject: it causes the creation of fractal structures collapse of space-time structure. This is what has also helped Moses to "open" the waters of the Red Sea to allow the passage of the fleeing Hebrews. Moreover, the shaking of the spatiotemporal structure breaks the Global which then projects in our local universe fragments of another real. Thus arises in the human mind the "world of the gods."

Statues of Easter Island unfinished. In addition to their powerful emissions, they would have allowed the relocation of people. Relationships could have been well established with other civilizations, despite the isolation of this small island in the Pacific.

Q - The mythological gods would be so real as separate from the emergence of the Global Local?

R - That's what we have checked repeatedly. For broken rice Global, are relocating in our world of forms of entities that meet the names and evocations that assigned to them ancient religions and magical practices. It should also be extremely cautious when dealing with these irruptions of Global. We are often forced to retreat and neutralize emissions and Champs concerned when we discover what lies behind some relocated realities.

Q - This is a justification of beliefs in the name powers of incantation punctuated and sacred music ...

R - In particular, there are Emissions from rhythms with their own fields and Taofel that can boost Emissions from Forms. The rhythms and incantations of "rain dances" for example, are progressing according to increasingly high Taofel fields that abolish distances and cause the relocation / relocation phenomenon "Rain." You can see the rain fall and in bright sunshine. Wilhelm Reich got rain in the desert directing skyward certain tubular shapes. We tested them: they emit "Unity Sprink" and partially "Promised Land".

Q - Among the "Great Initiates", which you seem to have reached the most advanced knowledge in the field of Emissions from Forms?

R - The priests of Egypt and those of Delphi. The High Priest of the Temple of Jerusalem, which aroused once a year such high Taofel Fields, by pronouncing the name of God, we understand why he had to be alone in the temple and tell the sacred name softly. Moses able to return to fields that have outsourced any other individual forever. The famous occultist John Dee whose mirror, used with an alphabet and appropriate forms, did arise Global extremely powerful entities.

Jesus Christ is even more enigmatic. We have reason to believe that between the Crucifixion and the Descent from the Cross, he projected to the world something incredibly high that we were not able to define, but whose influence remained alive until our days. I also wonder if we have not a reality that transcends the

field of Emissions from forms and fields Taofel, so high they are.

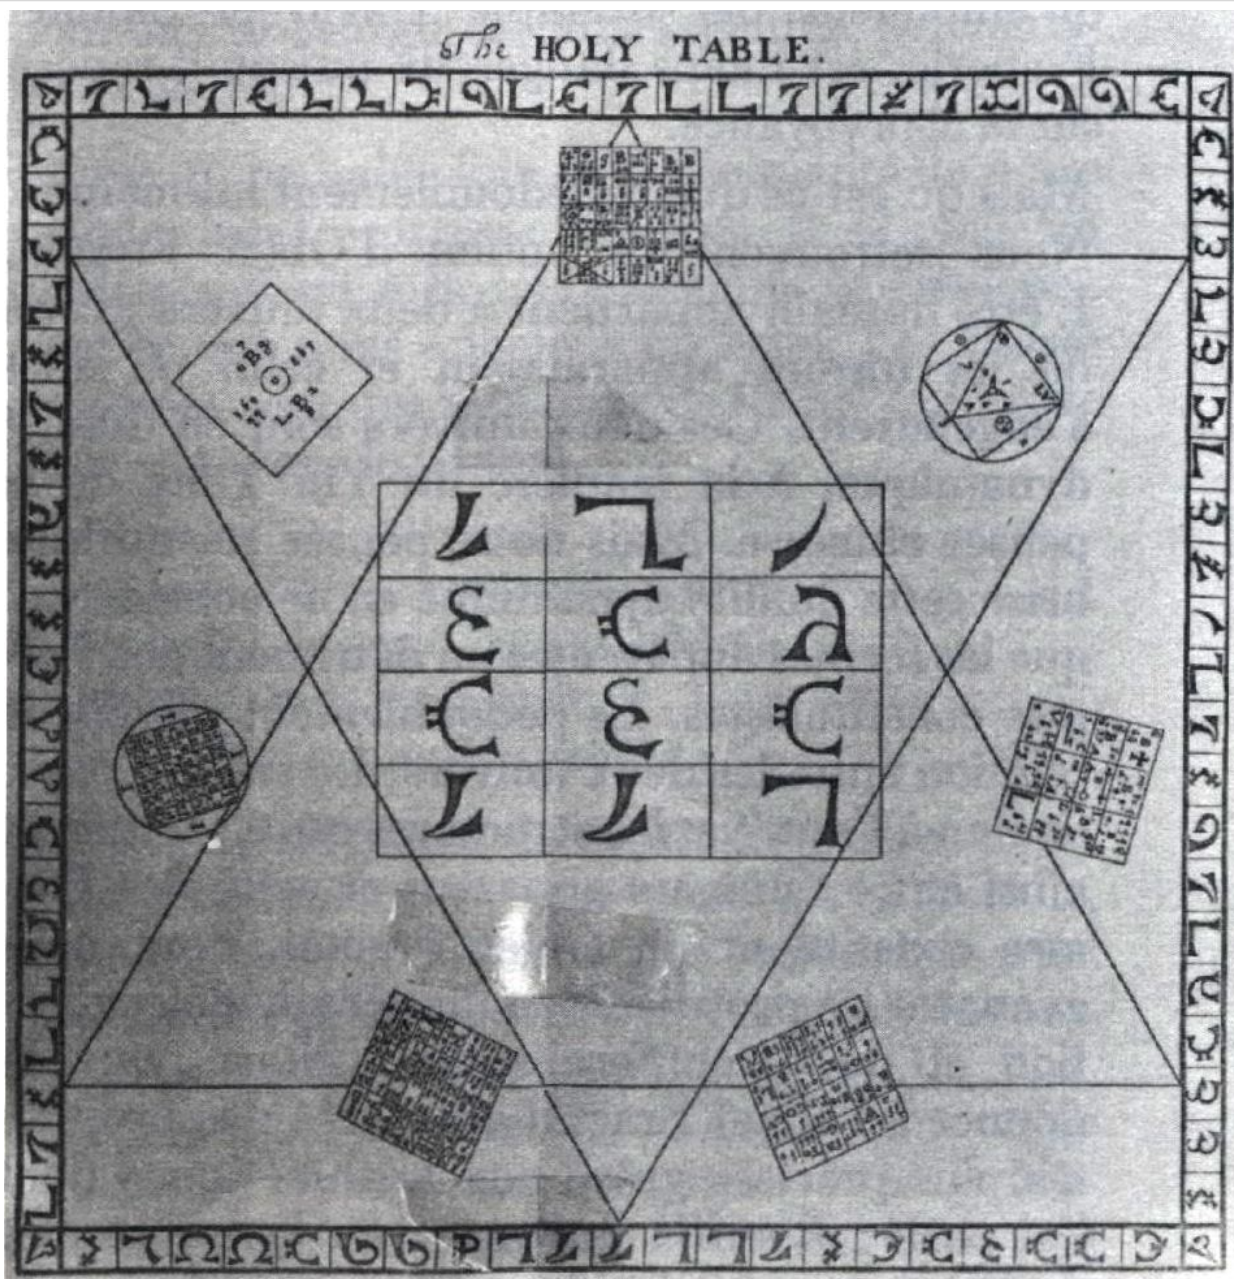

Table used by John Dee. By having the shapes on the table, we get pulsating emissions at very long range, in very particular states.

Q - The conscience would overhang the Local and the Global or would command their mutual penetration?

R - We know in any case that prayer has the power. Andre Belizal could, praying intensely for several hours, reverse harmful emission of V_{-E} into beneficial Issue V_{-M} . The result was maintained for more than two years before the source of V_{-E} is manifested again.

**Q - Let's go back on research involving duplication.
How do you work and from what assumptions?**

A - We are working with sensitive accustomed to this practice. Frequently, several of them are projected simultaneously on the same site or to the same time to enable us to verify information by cross-checking. As a sensitive Raymond Réant, which is an active member of the Ark'All Foundation, employs the physical duplication, that is to say is exteriorized in the form of a substance which remains, however, connected to the body by a sort filament whose failure would cause immediate death. This is what the occultists call the astral body and the "silver cord". The mental division, qu'emploient eg David and Samuel Franeric, is less dangerous since it relies on clairvoyance. But what duplication itself? We find the concept of Fractal Object. The human being belongs to two worlds: one where the forms appear and when they generate. These two worlds are dynamic duality, like the Yin / Yang of Chinese thought. But our scientific thought breaks this dynamic duality considering only the outward forms at the expense of the constituent forms. Duplication restores the relationship between the two universes. The sensitive switches from one to the other and the structures thus exchanged between the apparent and the universe of forms is an Object Fractal, we have seen the properties in offshoring and detemporalization. We can give the Subject Fractal created more specific properties through the arithmetic I mentioned: just transpose the field or state properties of the system that we want to study to construct the model of our Fractal Object. The sensitive projecting through that Object Fractal and reach areas, places or times, planets and galaxies of interest.

Q - Some examples, in time or ... the cosmos!

R - I can not quote the most interesting at the moment, either because the research is still in progress, or because it is the areas which it is better not to talk once we have an idea of what there. Encourage amateurs to try their luck would expose them to serious risks. Let's say we had some interesting results regarding the moon and other planets, as well as about the

Andromeda Nebula. We also discovered that Saturn's ring emits State "KES Ph."

For land past, I can give you an example "innocent". You may know the origin of the work Tartini entitled "The Devil Trill". Tartini, Italian violinist, said he had been awakened at night by a tune that was playing next to her bed a creature reminding the devil. The next day, Tartini undertook to transcribe the music heard but could never write the whole song.

David and Samuel Franeric did a split to know what really happened that night. We know that there has been a significant relocation, a passage through a fractal structure in which Tartini has actually been in the presence of the entity-devil who played him music in question. Samuel Franeric could hear the passages that are missing in the version of "Devil's Trill" we know. When he has completed his musical training, we will take with him this doubling so he can write or dictate the unpublished fragments.

Q - I guess this kind of investigation is not without obstacles and traps ...

R - Indeed. Among others I will mention a kind of barrier that we discovered almost by accident and we now call a Grid.

In seeking water sources on land in Haute-Provence, I discovered that the pendulum responded sporadically: impossible to detect water on a continuous line. Other researchers found the phenomenon. I then asked if we were not dealing with a sort of natural screen that concealed most of the groundwater system in our research. So I studied the nature and distribution of this screen and found the forms and emissions that removed the obstacle. Thus was born the concept of grids and at the same time we learned to overcome these grills as they arise.

Q - Apart from natural Grids, do you encounter intentional Grids, barriers or screens psychic willing voluntarily to protect the confidentiality of certain places?

R - very frequently. You know the famous Cappella Sansevero in Naples, where the two mummies were found a very special kind. This is a man and a woman, apart from the skeleton, the only remaining vascular system: all blood vessels were fully maintained by an unknown infiltration process discovered by Prince Paul Sanseverino, who had also been in trouble with the Inquisition for his research in anatomy and chemistry. We previously thought that the two bodies found in the crypt had been treated immediately after death, hence the excellent preservation of blood vessels. It would also be hard to replicate such intervention today.

Samuel Franerich was split in the crypt of Sansevero at the time of the mysterious operations of Prince Sanseverino. He then hit a very strong resistance that was other than a magical Grid. We stay in touch with S. Franerich through another sensitive in mental division. The information received has enabled us to raise the Grid.

S. Franerich could then give us an interesting glimpse of what was actually happening at that time. Research Prince Sanseverino were likely both magical and alchemical. He and his accomplices were seeking kinds of living robots which were left as the basic functions necessary for the blind execution of certain orders, including assassinations.

The operation took place on live subjects. The liquid injected in the vessels was a kind of alchemical mercury. An important phase of the process was the immersion of the body and treated in an underground river close to the Vesuvius. When subjects were thus transformed, one could manipulate acting on their Ext. But success was never definitive, subjects died shortly after.

Q - You stand there a method that could solve much controversy among historians and archaeologists. Thus also between supporters and critics of the phenomenon such ...

R - One can understand what the UFO from the notions I have just developed. We have seen that in certain circumstances the passage by a Fractal Object particular, humans can project the

Local to the Global or pop the Global to bring out certain realities, personalized or not.

Let's go a little further. In all reality of our local world is in Global a model that is both set and element: this is what we call an Enel. Things localized are replicas of Enel that exists for them in the Global.

Q - The Enel would sorts of archetypes or hyper-objects whose premises only hold more or less faithful copies?

R - And sometimes even real cartoons! This is exactly what the UFO, as we have shown our research as well on photos of places or people "contacted". The UFO phenomenon is accompanied by addition of type States "KES Ph" extremely dangerous and burns, mental disorders and other symptoms in those who approached a UFO to proceed Emissions from forms and fields that Taofel we know well. You'll notice the number of testimonies of offshoring. Subjects reported being trained inside the UFO and transported "on another planet", etc. In fact they were simply caught in the Object Fractal structure of the UFO

Q - But who manipulates Fractal purpose and what are the UFO caricature?

A - The unconscious manipulator is none other than the human community and UFOs are distorted replicas of technical objects of our civilization.

Each time experiencing different UFO that "Mimic" civilization itself. (Gavarni Engraving for "Gulliver's Travels" Swift).

The technical objects are, by definition, non-natural forms, and sometimes unnatural. The accumulation of these objects created in our area of cumulonimbus décalaires by which some of our technological achievements are relocating and are projected

into the Global. By shaking of Enel corresponding to the subject Technical relocated, Global returns in our space, this time through anti-décalaires, the "antics" of our current technology: these UFO whose characteristics and performance are those our own gear but amplified and even outraged. Just as the Great Initiates Global got superhuman entities, divine or infernal in the spirit of one who activated the fields Taofel and passing in the Object Fractal, and technological saturation of our age gives rise to these phenomena Global dangerous and ironic that are UFOs

Q - Every time also knows different UFOs, which "mimic" the Technical Object of the moment, but transform functionality. If UFOs reflect the goal of our technology, the emissions and state their characteristics you pay are hardly reassuring ...

A - We know enough that State "KES Ph" with reversed Shin, which is that of UFOs, that doubt is no longer allowed.

But I must say that this is not the Object Technology itself is to question. These are unnatural features we assign to these objects, their redundant too, which make it impossible to integrate the cycles and systems of Nature. The features that can be integrated and harmonized in the natural world are projected in the Global which takes us ...

Q - ... The more features and anti disharmonic.

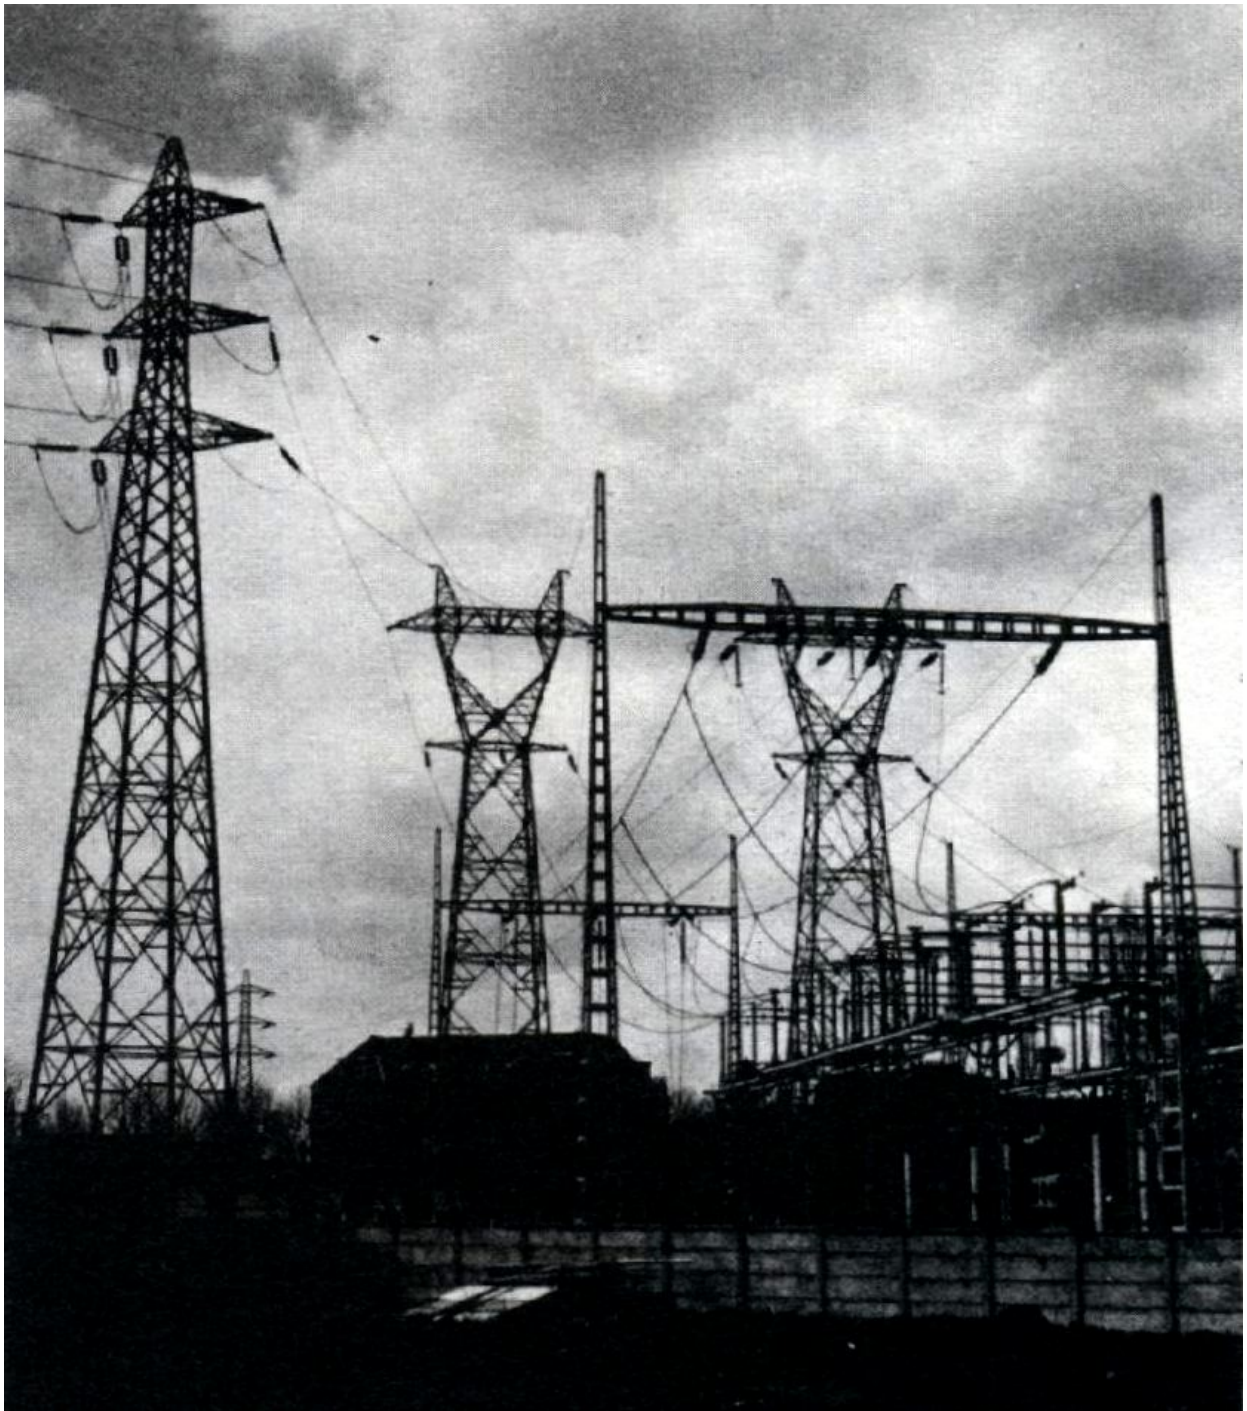

R - Necessarily, since the projection of the Local to the Global always causes a "response" amplified. If our technology meets the features inherent in the natural harmony and balance of living beings, broken Global will introduce in our world similar models. For now, we give to objects Technical opposite purpose to life. We draw the Global finalities that, by relocating, form veritable cancer in our universe.

The Technical Works of relocations have also, from the perspective of Forms emissions and states all the characteristics of cancer as it develops on living organisms fixing to the Ext initially then attacking the physical body.

Q - It would be good to remember about the role of the so-called Issue V^{-E} , both in the environment and habitat as artificial pollution.

R - R. Lafforest and John of the Foye checked the work of Belizal, Chaumery and Morel in this area. A home built above a water table receives Emissions V^{-E} and N^{-E} , both very harmful. In general, these emissions are compensated at ground level. But it can happen that Belizal called a break compensated Forces. When people are exposed to such influence, the risk of cancer or leukemia are increasing alarmingly.

The shapes and materials of modern buildings are also the source of hazardous emissions. The high-voltage lines, they emit a V^{-E} of 150 to 500 m for a line voltage of 200 000 volts.

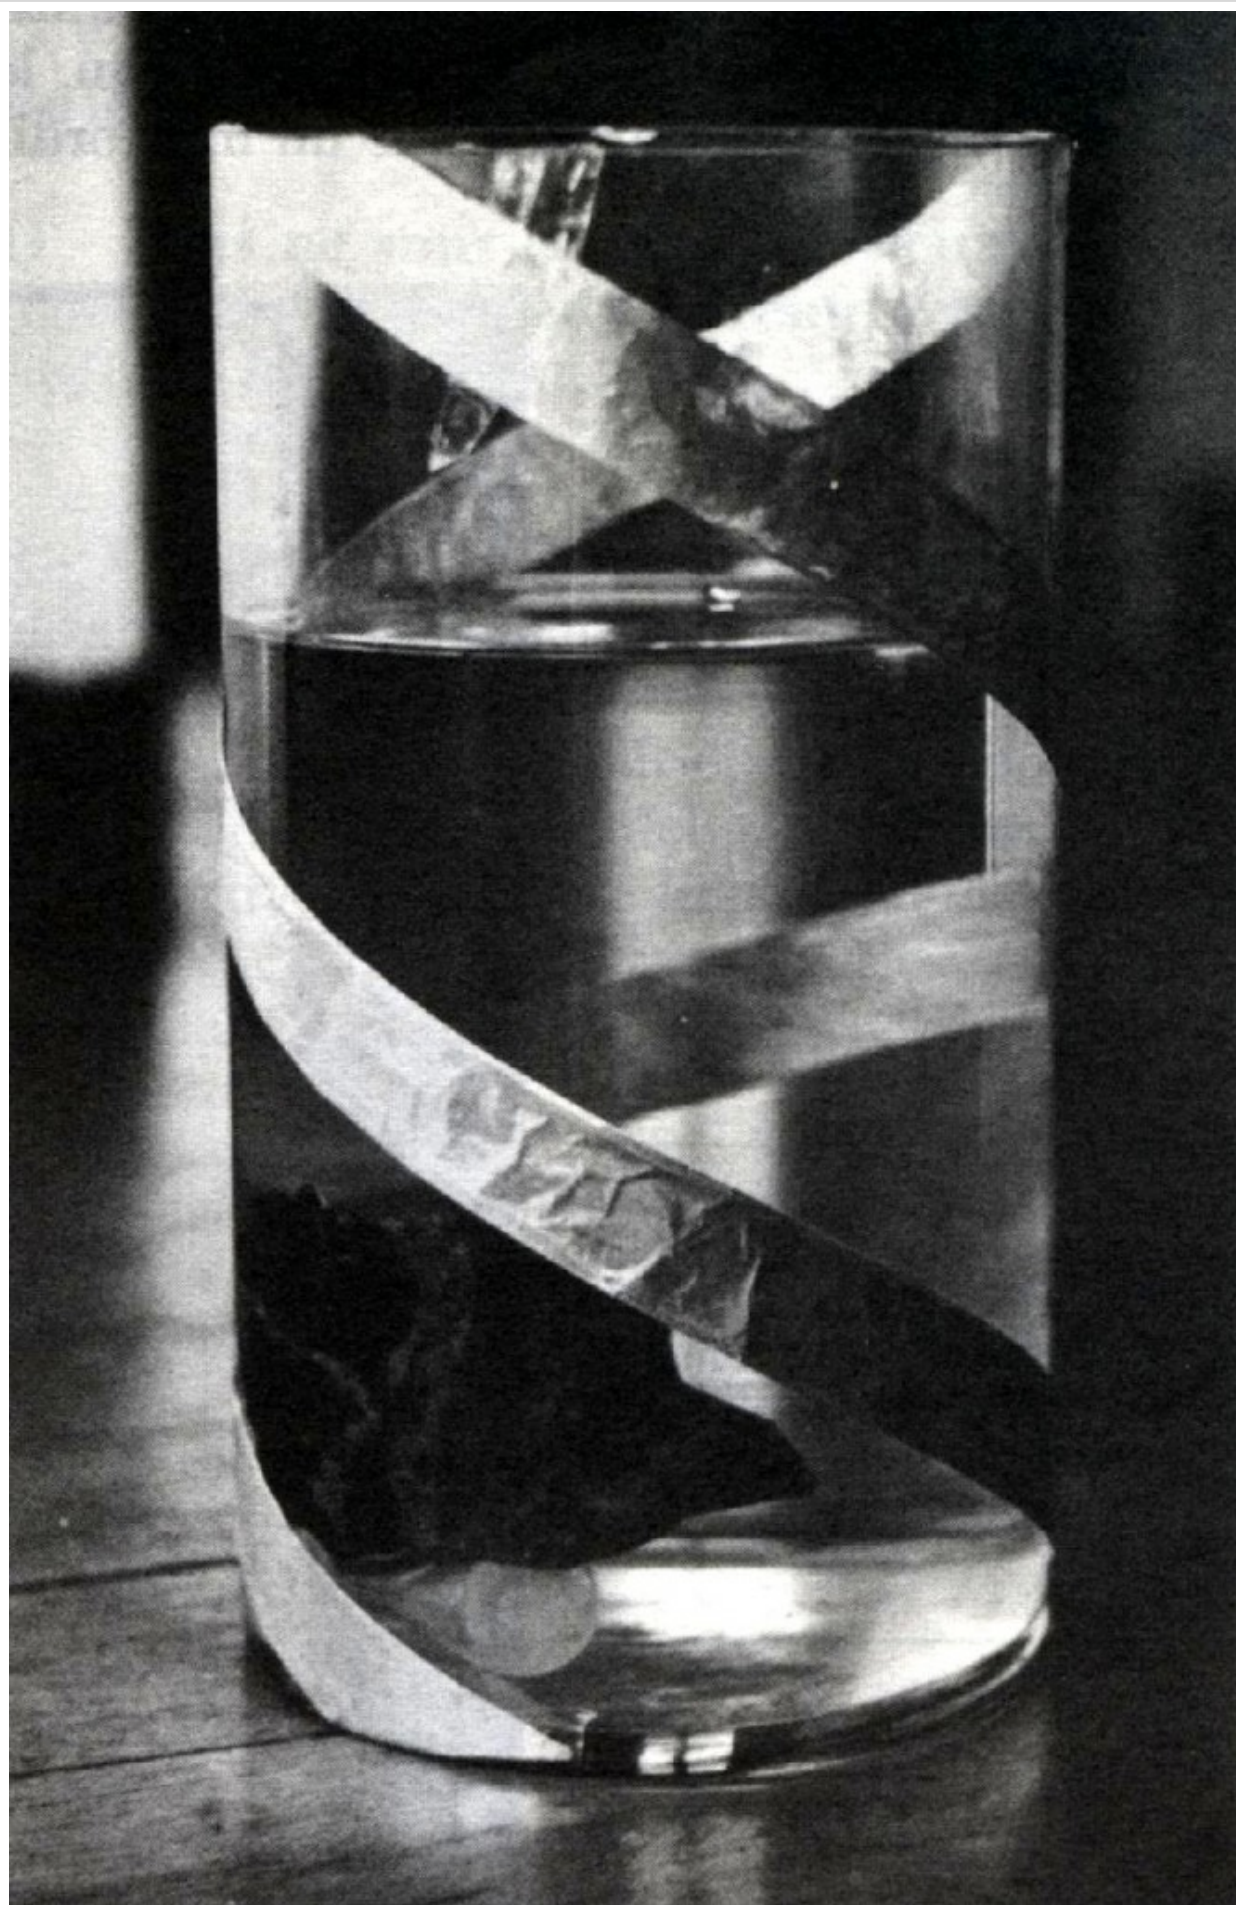

Nuclear power plants and high-voltage lines create disturbances in our environment that do not record detectors classical science. The effect is no less devastating on people who have the misfortune to be near.

At this level, we have rééquilibriseurs transceivers that compensate harmful atmospheres and do away with the early symptoms of more serious illness (fatigue, insomnia, nervous disorders, etc.). I must say also that many of these disorders disappear spontaneously if people gave their bed correct

orientation, avoided certain provisions furniture and electrical appliances and learned to be wary of some decorative items or jewelry that convey Emissions destabilizing. Many cases of depression, exhaustion or anxiety within similar causes whose action is all the more pernicious in that it is invisible and unknown to most people. Much more serious is the problem of nuclear power plants: all that emissions Form of evil have is generated by these buildings within 50 km: Taofel Fields reversed Anti-Sprink type, etc.

Q - Hopefully your research will provide the parade on time. Have you studied the means to protect or stimulate the living cells that are facing all these attacks?

R - We put water and oils to the action of high Taofel Fields. In these liquids, we placed living cells: they rose to the Champs liquids themselves. Our observations thus treated cells showed accelerated growth, improved life potential and defense capabilities, etc. Coming soon begin experiments on the polluted water: microorganisms stimulated by appropriate Taofel fields should, we believe, remove impurities of any kind.

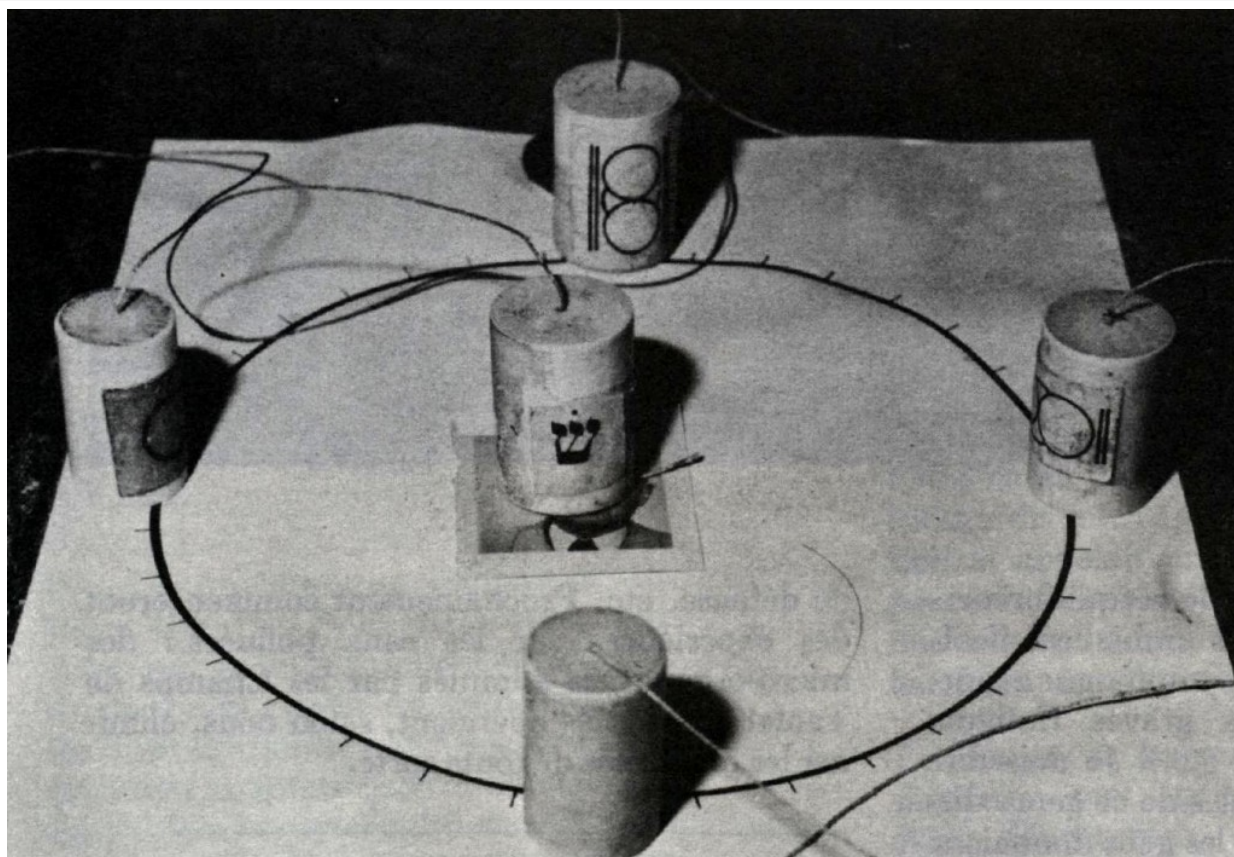

In this glass cylinder surrounded by a double helix to thoroughly

Q - When a medicine Form emissions?

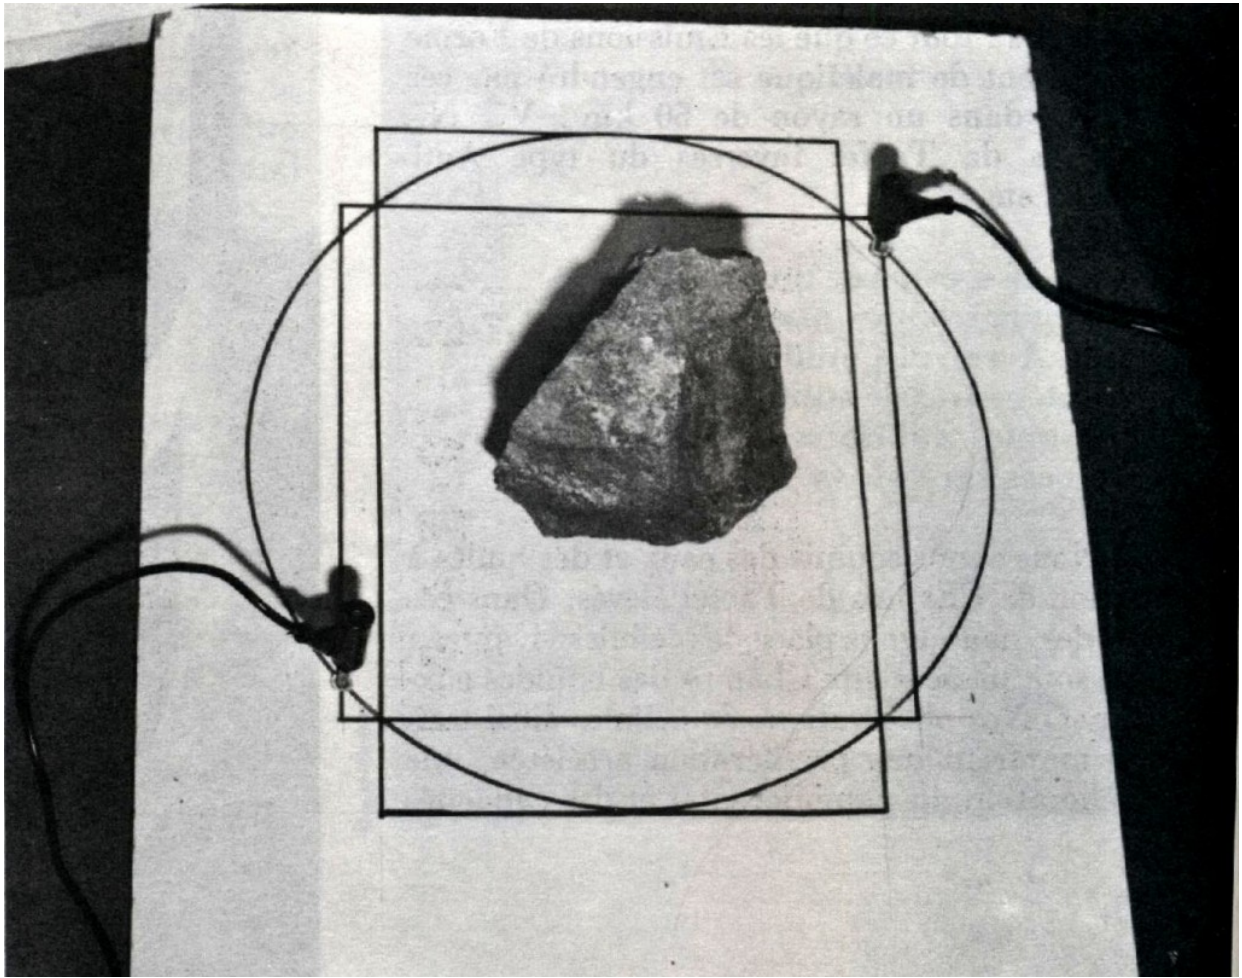

R - It depends on the doctors themselves. The possibilities are immense, including to heal remotely.

We treated an edible oil by Fields Taofel very high: it now has amazing tonic and regenerative properties. We can deal so any food substance, water, wine, etc. By treating such an ordinary honey, we obtain a product whose biological properties are superior to those of royal jelly. In terms of pharmaceutical substances, there may be opportunities like that.

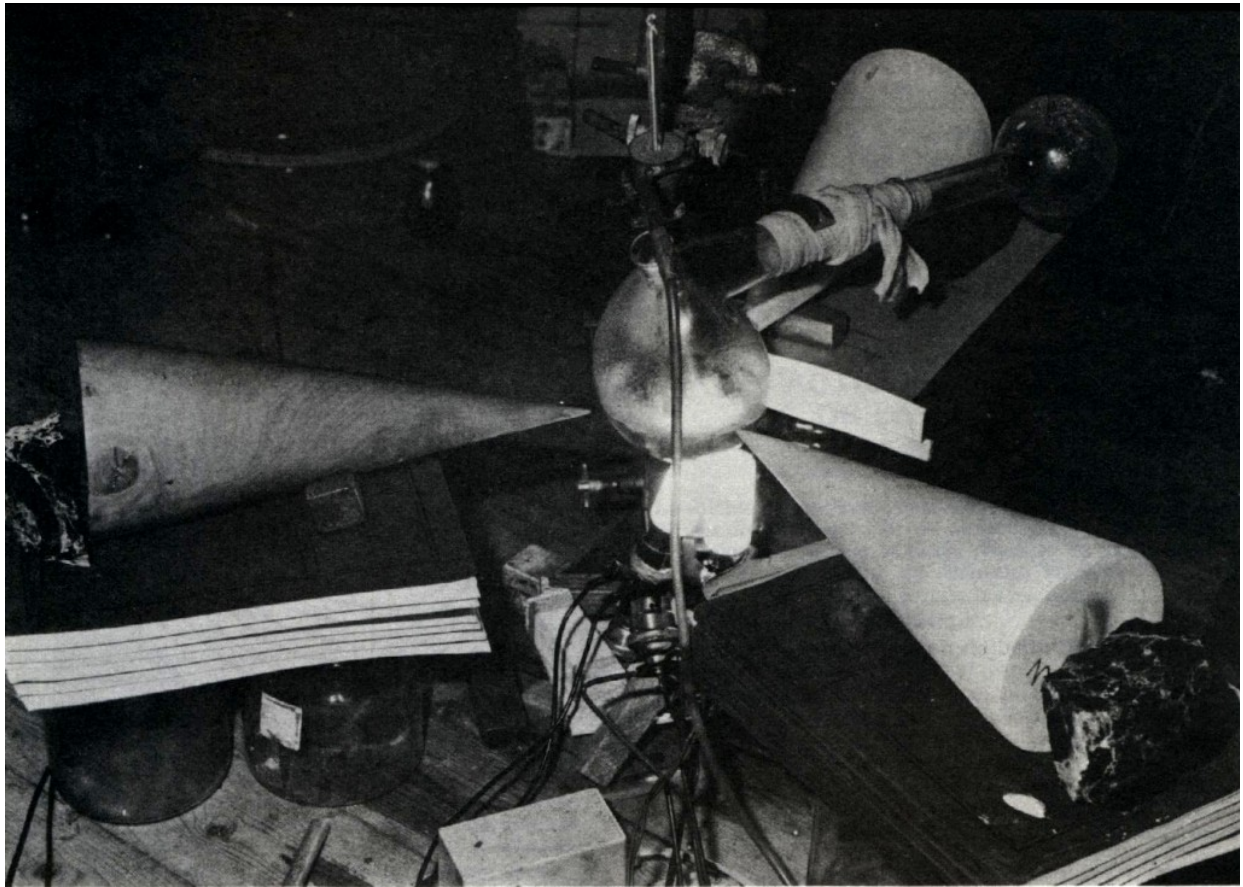

We can diagnose cancer two years before it is detectable in the human body. As I said, cancer is primarily fixed on an individual Ext. We can identify the right moment and keep it moving in the body.

Remote recovery of a disturbed Vital Field. In the center of the photo of the subject, the pendulum Shin pointed right in the middle, the four cardinal points, the four components of the Vital Field.

Shape inspired by the "Companions of the tables" of medieval esotericism, with mineral center. Electrical voltage completes the device which, under a bed, provides a restful sleep.

oil processing by passing through the Champs Taofel very high. The products thus treated are used in therapeutics. Their properties are similar to those of some alchemical spirits but getting in is much faster (36 hours).

Q. - Emissions from forms-they provide an alternative to current technology and industry, so the dangers that you report just now?

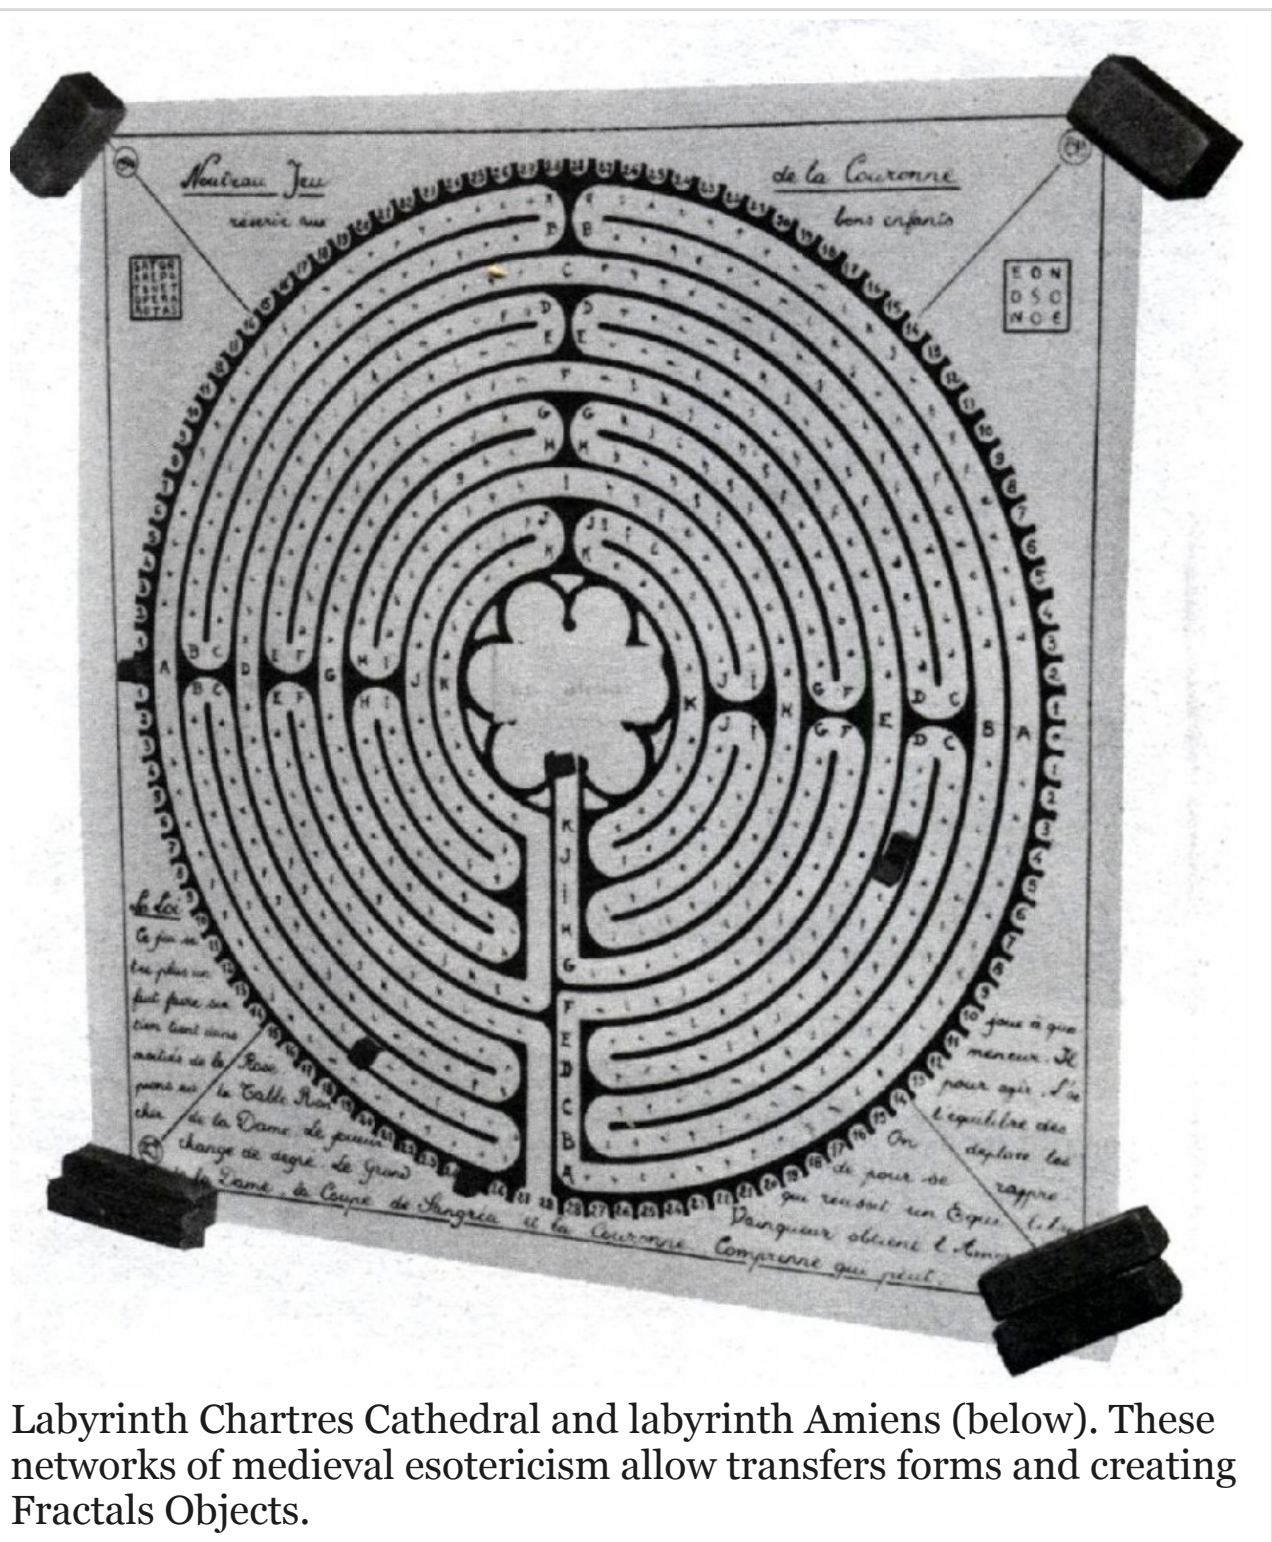

R - Of course, otherwise our findings on the plant and the human body would have an approximate value. And the radical changes that we get on inorganic matter are the best experimental confirmation of the hypothesis of the Champs Taofel: when we manage through them without chemical catalysis catalyst, one can hardly deny the magnitude of their effects or talk about subjective results. We can also, by the same means, carry out the polymerization of the molecules, which is one of the essential operations of the current industry. It is also possible to modify the properties of various bodies. Obtainable e.g. a mercury density of 15 instead of 13.6, modify the vaporization or melting temperatures, etc.

In agriculture, we are now able to obtain biological transmutations under L. Kervran. As for the pure physics, Emissions from forms alter the main constants, as I have explained. The alternative which you refer is possible because without contesting the Technical Object, we assign non-localized features, extensions harmonized with nature. We thus avoid accumulating, unhealthy trampling I talked about UFOs and that is also the source of all forms of pollution.

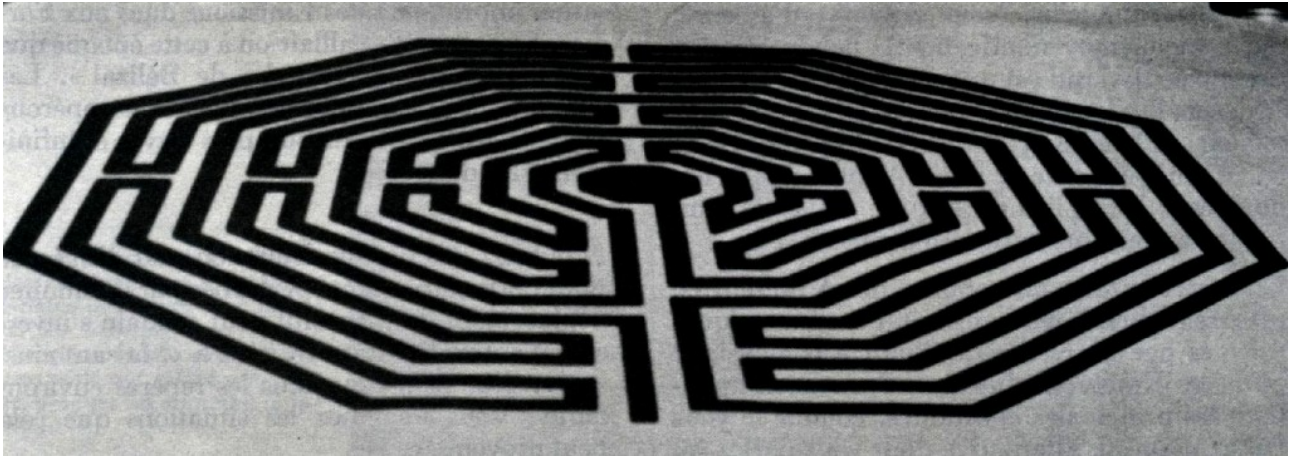

Q - Do not underestimate also from inherent danger in your own research ...

- You know that Chaumery, the first collaborator of Mr. Belizal, died of careless use of Emissions from Forms. Still not working- it was then that the fields Taofel "of Belizal". Fields of Taofel in which we operate today are much higher and infinitely more dangerous.

Remember that misdirected Issuance or whose orientation has been disturbed by a slight movement of the device can suddenly reverse or enter state "K Sh Ph", thus skipping one stroke all pins surrounding. Imagine situations this may cause.

Labyrinth Chartres Cathedral and labyrinth Amiens (below). These networks of medieval esotericism allow transfers forms and creating Fractals Objects.

A total access to the universe ...?

We risk the same accident that magicians of old, magic besides being a special case of use of Emissions from Forms. Burns, heart failure, brain aneurysm ... or worse, this is what awaits those who might work in this area without being properly trained by an experienced researcher.

Q - Besides, to where are your formulations and experiences, would anyone want to access it should first perform a real mental conversion, if not a mutation of thought ...

R - Indeed. Rationalist thought can only distort the realities we care. Our work requires constantly think "differently".

The scientific evolution has not been useless. Future science will get more powerful as those known emissions of Veterans, including through the alloys we know today.

Technical civilization stops technique as the "form of waves" stopped the Champ "Belizal". As for us, we go to the Champs increasingly high for the Global projections, broken more and more rich. Until the day when humans will finally abandon the premises and set his house in the ... Global!
