ACKNOWLEDGEMENTS

This book is dedicated first and foremost to Dr. Ibrahim Karim, without whose expert guidance and generous sharing of knowledge this work would certainly not have been possible. Thank you, Ibrahim.

Thanks to Rawya Karim for her tireless support of BioGeometry and the many kindnesses and considerations she has extended to me in my work researching and popularizing Scientific Radiesthesia and BioGeometry.

Thanks to my wonderful wife Elizabeth for her constant encouragement and assistance at every turn (even for ideas and projects which must have seemed very unusual at the time!) and for her lovely illustrations.

Thanks to my research partner and dear friend Jane Weaver for her tireless work in translating the original French texts of the Scientific Radiesthesists into English and innumerable other assistances in times of great need. There would be no Scientific Radiesthesia Translation Project without her.

Thanks to my spiritual brother Craig Siska for his great illustrations throughout this text, produced in short notice with fine style.

And finally, thanks to my amigo and expert designer Michael Smith for his beautiful cover, and for always being willing to accompany me in exploring new approaches in self-actualization.

PREFACE

This book is intended to fill the gap in the English language regarding fundamental information on the mid-1900's French school of Scientific Radiesthesia, and the further development and extension of that work currently taking place in the BioGeometry system created by Dr. Ibrahim Karim of Cairo, Egypt. This book is only a first attempt in this direction, and will be followed in time with more comprehensive texts. The VESICA INSTITUTE has initiated the Scientific Radiesthesia Translation Project, which aims to make the important knowledge and techniques of the French pioneers of this research available for the first time in English language texts. Translation of this material and experimental evaluation of the claims made therein is now ongoing. The VESICA INSTITUTE also offers training seminars in the foundations and modern extensions of this work.

We ask the indulgence of our readers regarding the overall rough form of the information in this book, an inevitable consequence of the need to make this fundamental information available without further delays. All too often researchers hesitate and work on their material for many years in an effort to make it perfect, only to have the material never reach the public which would have benefited from it. Accordingly, we apologize for any inadvertent errors that may exist in this work, and encourage all readers to believe nothing and test everything.

Note: This book is a historical overview of the development of modern Scientific Radiesthesia and details a number of experimental research findings. Absolutely no claims are made for any of the material herein. Particularly no medical claims whatsoever are made, nor should any such claims be inferred. See the healing practitioner of your choice for any medical conditions with which you may require aid. No one associated with The VESICA INSTITUTE diagnoses nor treats any illness, so be advised that no communications directed to our offices soliciting diagnosis or treatment advice will be returned. All material herein is for historical interest and experimental research purposes only.

INTRODUCTION

This book is the first English language text of which I am aware to attempt to lay out the foundations of the breakthrough discoveries and applications of a particular line of French and Egyptian radiesthesic researchers over the last 70 years. Their work has begun the process of reclaiming a key part of the tremendously advanced spiritual science known to the great Initiation traditions of antiquity. They devoted their lives to bringing back vital pieces of the knowledge of ancient science and sacred geometry for the healing of human beings and of the planet as a whole.

This story is only at its beginnings; some of those reading this text will become part of the story and advance this work further, to the great benefit of the world.

Perhaps you are one of them.

THE COURSE OF THIS NARRATIVE

This text follows the historical line of research discoveries beginning with the work of pioneering French radiesthesists (those who study subtle energies through dowsing protocols) Chaumery, de Belizal, and Morel and then advanced by the Russian researcher Scariatin (better known as Enel). The research line then moves to Egypt with the work of Dr. Khalil Messiha and flowers with the modern BioGeometry work of Dr. Ibrahim Karim of Cairo. Because this book attempts to both provide a historical narrative and to clearly explain the key discoveries and their significance, some trade-offs are necessary; this will be seen in some references early in the text to concepts that are only fully explained later in the narrative. Hopefully this inelegant approach is justified to ensure that as much vital information as possible be included here. These earlier references to concepts only fully explained later should become much clearer upon a second reading of the text.

A BRIEF OVERVIEW OF SOME KEY CONCEPTS IN THIS TEXT

1. Essential knowledge and techniques from the esoteric science of the ancients have been rediscovered in the obscure, little-known work of French and Egyptian researchers of the last 70 years.

2. One of their most important contributions is an organization of our physical world into categories based on a system of 12 different vibrational levels. These vibrations can be detected through their emanations. Understanding these 12 levels -- and how to practically work with them -- opens up vast new worlds and new ways to realistically support and balance the energies in human beings and in the world at large.

3. The 12 different vibrational qualities are connected to the geometric forms of all manifest creation in the world. A great secret of ancient science is that specific geometric forms connect directly to specific energies and vibratory forces. The ancients knew that it is possible to create precise healing and uplifting energies and to alchemically transform detrimental energies into beneficial qualities through the wise use of sacred geometric principles in design and therapy. The French researchers called the vibrational energies they detected coming from geometric patterns, “shape-caused waves”.

4. The first of the 12 qualities to be thoroughly studied was a powerful and mysterious energy known as “Negative Green” (the reason for this apparently odd name is explained later in this text). This quality exists in all power spots in nature and in the human being. Negative Green is a carrier wave for both energy and consciousness, connecting the spiritual and physical worlds. It is emitted by specific geometric forms, including the dome and the pyramid, elucidating why these forms are used in sacred architecture for temples and places of spiritual initiation. There are, however, two components to this Negative Green quality; a vertical wave that is a powerful toxic radiation to be avoided or transmuted, and a horizontal wave that is very beneficial.

5. Two other qualities within this 12-part spectrum of energy are known as the Higher Harmonic of Gold and the Higher Harmonic of Ultraviolet. These qualities are found in the healthy human body, support wellness on every level, and are vital to spiritual work.

6. These three qualities, Negative Green (horizontal component only), Higher Harmonic of Gold, and Higher Harmonic of Ultraviolet, are collectively known as the “BG3”. This term will stand for the three BioGeometry qualities, for they are the fundamental beneficial energies one learns to use for practical purposes in modern Egyptian BioGeometry training.

7. The BG3 are the key components of spiritual energy fields. They have a variety of astonishing experimental applications in supporting wellness and balance in all energetic systems, spiritual work, and in transmuting toxic

energies into beneficial energies, including the transforming of toxic radiations produced by modern technology.

The brief overview above just scratches the surface, but it should be enough to provide a context for the more detailed exploration that follows.

Please bear in mind that this powerful body of work is still in its infancy; we are discovering (in many cases *re*-discovering) more of the lost knowledge and techniques of ancient Initiates every day. I hope that interested readers will get involved in this work and help us to find new ways to apply this knowledge to aid humanity and the natural world.

Once again, we stress that the material contained herein is for information purposes only and is to be considered experimental. No claims of any kind are made. Do not undertake any work whatsoever with the information contained in this book for which you are not prepared to be completely and personally responsible.

GUIDE TO ABBREVIATIONS AND TERMS USED IN THIS TEXT

Radiesthesia: Primarily a European term for the science and art of detecting vibrational radiations (subtle energies), most of which are beyond the detection capability of modern science. The term Radiesthesia is essentially equivalent to the more common North American term, “Dowsing”. My preference to either of these terms is actually an older term, “Divining”, because it emphasizes that the source of the energies and information we are studying are in the Divine world that created us.

Mental Radiesthesia: This form of Radiesthesia involves asking mental questions and receiving guidance from the movement of the pendulum. It is the most common form in Europe and America.

Vibrational Radiesthesia: This is also known as Physical Radiesthesia, Microvibrational Physics, and Scientific Radiesthesia (or Dowsing). It involves detection of already present energetic phenomena. It is common in Europe and Egypt.

Although mental and vibrational radiesthesia are conceptually discrete, in reality the two tend to overlap to at least some extent in practical work.

BioGeometry: The modern Egyptian school of Scientific Radiesthesia established by Dr. Ibrahim Karim of Cairo, Egypt. This approach integrates and advances the work of the earlier French Scientific Radiesthesists in both its knowledge base and through its many practical applications. It particularly advances work regarding the effect of geometric qualities on biological life forces, hence the name “BioGeometry”.

PRP: Stands for “Perimeter Resonance Position”, the place within the invisible energy grid of any space where a particular object will go into resonance with BG3 forces; leading to an emanation of specific energies into the space.

CRP: Stands for “Central Resonance Position”. This refers to an object turned on its own axis to the precise position that it emanates beneficial energies to itself.

BG3: Stands for the “BioGeometry Three”, the three most important beneficial and transcendental vibrational qualities in the 12-fold quality

spectrum used in the Egyptian BioGeometry system developed by Dr. Ibrahim Karim. These three are detailed below: Negative Green, Higher Harmonic of Gold, and Higher Harmonic of Ultraviolet.

-G: Stands for “Negative Green”, the powerful penetrating energy discovered by French researchers Chaumery and de Belizal. It has both beneficial and detrimental components, based on the horizontal (H-G) and vertical (V-G) waves respectively. Negative Green also contains as a sub-component the critically important spiritual carrier wave essential to spiritual work.

HHG: Stands for the “Higher Harmonic of Gold”, the transcendental quality associated with Divine Wisdom; it was discovered by Egyptian researcher, Dr. Ibrahim Karim, who developed methods to directly measure and create it. This quality is a vital part of real spiritual alchemy.

HHUV: Stands for “Higher Harmonic of Ultraviolet”, the transcendental quality associated with beneficial spiritual beings and energies. It was discovered by Dr. Ibrahim Karim.

COLORS OF THE 12-FOLD ENERGY-QUALITY SPECTRUM:

R: Red
O: Orange
Y: Yellow
G: Green
B: Blue
I: Indigo
V: Violet
UV: Ultra-violet
W: White
-G: Negative Green
Blk: Black
IR: Infra-red

form of Pendulum Dowsing in the English-speaking world today, and it has also has become dominant in France since the 1950's.

VIBRATIONAL RADIESTHESIA AS AN EXTENSION OF PHYSICS RESEARCH

Chaumery, de Belizal, and other French researchers of the time felt that the mental form of dowsing could be overly subjective. They wanted to use dowsing as an esoteric extension of physics, with scientific protocols to detect vibrational phenomena that could not be detected or integrated by the electro-magnetic detectors and the materialistic dogmas of modern science. Chaumery and de Belizal felt that Scientific Radiesthesia revealed the true key to what is usually referred to abstractly as “sympathetic magic”, wherein vibrational linkages can be created and manipulated to manifest effects which cannot be explained and so must be denied, despite the evidence, by materialistic science.

THE ANCIENT ORIGINS OF PRACTICAL RADIESTHESIA

The text *Essai de Radiesthésie Vibratoire* explored the use of vibrational linkages in different cultures of the ancient world, beginning with the information left to us in ancient cave drawings. Referring to researcher Norbert Casteret and his discoveries of caveman images in the caverns of the Pyrenees, Chaumery and de Belizal pointed to significant indications in these drawings that they were primarily intended to create vibrational linkages between these early humans and the animals they hunted. A cave image of a hand on the flank of an animal was intended to impose the will and power of the caveman on the prey; images of lions and wolves are riddled with spear and arrow impacts on the animals' vital areas. Through the practices with these images, the animals were weakened to become easier prey to the hunters. Although this idea seems an absurd superstition to the modern Western mind, the objective findings of the Scientific Radiesthesists indicate that this phenomenon, in many different guises, is quite real.

THE LAW OF SIMILARS AND RESONANCE

Chaumery and de Belizal used the term “The Law of Similars” to explain the fundamental principle that makes vibrational linkages effective by those knowledgeable in its use. Essentially, all things vibrate with precise energies which create waveforms that are not perceptible to the five senses -- nor, in

many cases, to electro-magnetic detection instruments. All shapes emit vibrations we call “shape-caused waves” (the best English translation of the French expression, *ondes de forme*, for this phenomenon, used by Chaumery, de Belizal, and other researchers such as Louis Turenne). Similar shapes are connected with each other by these waves, i.e. via the Law of Similars. This applies not only to similar three-dimensional shapes, but also to the mental images of these things.

The eye registers an image in the brain, leading to the ability of (in this instance) the cave artist to project the image mentally onto a wall and create an accurate two-dimensional representation of three-dimensional objects or beings. This depiction, which can take different forms such as a statue, for example, connects vibrationally with the original. In different religious traditions around the world, special rituals and ceremonies were and are used by priests to solidify this vibrational linkage. Ritual can make the linkages more effective, although the linkages can still be operative without ceremonial support. (NOTE: Special research has been done by Dr. Ibrahim Karim to show that religious ritual and ceremonies are often needed for the human being to be able to properly “digest” certain spiritual vibrational energies; without the rituals the energies may cause imbalance in the human energy field).

This vibrational linkage between similars, unknown to modern science but a fundamental understanding of all traditional cultures, was referred to by Chaumery and de Belizal as “resonance”.

THE “WAND OF COMMANDMENT”

Chaumery and de Belizal pointed to ancient artifacts of the cave-dwellers as evidence of their use of radiesthesia. Numerous short staffs made of wood or reindeer bone have been found which have large circular holes at the top of the staffs. Some of these items, which Chaumery and de Belizal termed “Wands of Commandment”, also have the images of animals inscribed on them. Chaumery and de Belizal believed that a stick was passed through the hole in the Wand so that the stick could be held horizontally in one hand while the other hand was used as an antenna. When the vibration of an animal was detected this would cause the Wand to move due to the vibrational linkage, indicating the direction to go to find the desired animal.

RADIESTHESIA IN ANCIENT CHINA

Chaumery and de Belizal believed that the Chinese were practicing scientific radiesthesia 5000 years ago through the use of the Ba-Gua geometric

pattern. This pattern, popularized in the West in recent years through the growing popularity of Feng Shui, is an octagon, or symmetrical eight-sided shape, which has the one or the eight fundamental trigrams (composed of three lines, each of the which is solid or broken in the middle) of the I Ching located at each of the eight sides. In the center of the design is the Yin-Yang symbol of flowing dark and light areas within a circle.

Chaumery and de Belizal found the Ba-Gua to be an extremely precise emitter and receiver of the full range of universal vibrations. They found it could be used to detect both the vibration of the illness of a person and the vibration needed to remedy the illness, by placing a witness of the patient in the center of the Ba-Gua. The design could be used for multiple purposes, including detection of the toxic radiations from the soil and Earth Energy lines which the Chinese called the “Veins of the Dragon”.

To fully understand the significance and practical applications of the work of Chaumery and de Belizal, we must now explore their key discoveries and inventions. Perhaps the most fundamental of these was their discovery of the full 12-fold spectrum of vibrational energy which creates our world, along with the radiesthesia instruments to directly detect each of these specific energies.

THE VIBRATIONAL ENERGY SPECTRUM: 12 KEY COMPONENTS

Sacred Geometry literally means the “Sacred Measure of the Earth”, and includes the traditional teachings of many great cultures regarding the geometric patterns through which God manifests matter through Spirit. The most fundamental Sacred Geometric form is the Circle or the Sphere; this is the reason for the classical depiction of the Godhead holding a compass to create the first circle or sphere of manifest creation.

Chaumery and de Belizal found that both the circle and the sphere--and by extension everything in the physical world -- manifest a spectrum of 12 different energies, each of which has specific vibrational qualities. This discovery is of fundamental importance and is one of the great breakthroughs of modern times in regaining the deep knowledge of the sacred science known to antiquity.

THE 12 QUALITIES IN 3 DIMENSIONS (ON A SPHERE)

The key discovery of Chaumery and de Belizal was the detection of a full spectrum of 12 energy-qualities on the surface of a sphere. They found that the 12 qualities propagated on the surface of the sphere according to the position of the Sun; there was always a particular quality directly beneath the Sun's location, with the other 11 qualities arrayed in a great circle around the sphere.

From a position facing the sphere with the sun above the sphere, Chaumery and de Belizal found beneath the sun an energy that was in resonance with the vibratory quality of the visible color Green. Moving to the left of Green they found in sequence Yellow, Orange, and Red while to the right of Green they found in sequence Blue, Indigo, and Violet. This full ROYGBIV spectrum of the 7 visible colors then was centered with Green beneath the Sun and the other colors arrayed in order to either side on the illuminated half of the sphere.

Beneath the equator of this lighted hemisphere, Chaumery and de Belizal found 5 other qualities in resonance with “invisible” colors. Moving from Red downwards into the dark half of the sphere there appeared Infra-red (IR) and then Black; moving from Violet downward into the dark half of the sphere there appeared Ultraviolet (UV) and then White.

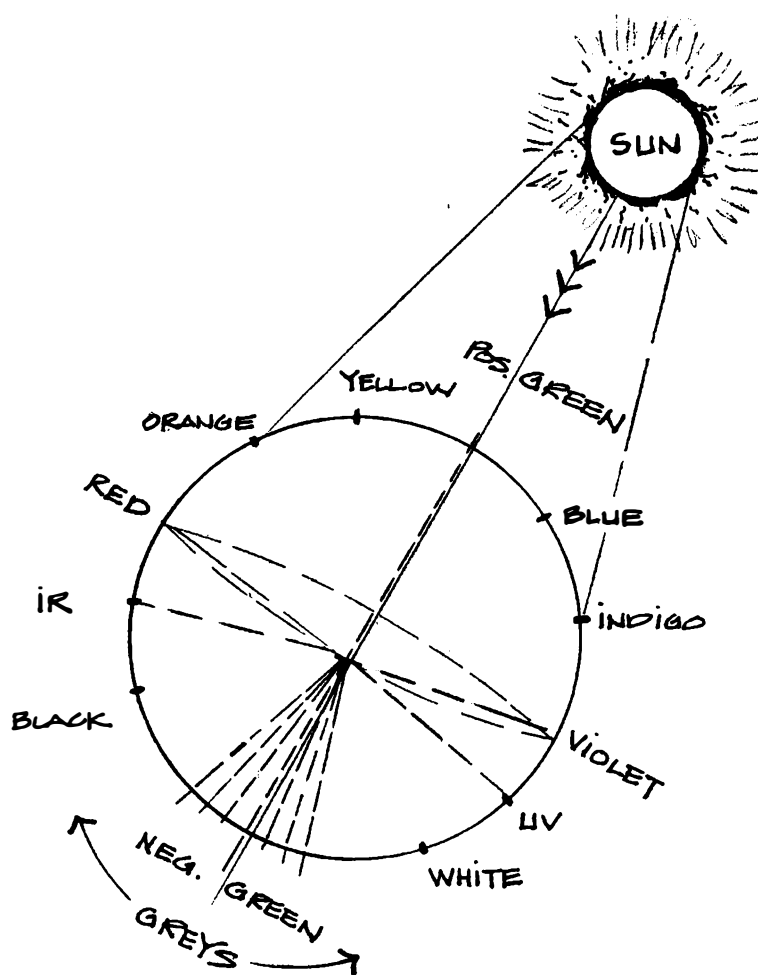

THE ORIGIN OF THE TERM NEGATIVE GREEN

Between the Black and White qualities lay the 12th, a powerful and mysterious vibration that would end up costing Léon Chaumery his life. This 12th energy appeared on the exact opposite side of the sphere from the position of the Sun and the visible Green quality. If the visible Green quality is seen as “positive” polarity and linked to the greatest light on the sphere, then this mysterious 12th quality on the opposite side of the sphere from “positive” Green would be “negative” in polarity and lie in the area of greatest physical darkness on the sphere. Accordingly, Chaumery and de Belizal called this 12th band “Negative Green”.

Some European texts refer to Negative Green as “Radiesthesia Gray” because it lies between the Black and White bands of the 12-fold spectrum.

Before we explore Negative Green further, let us be aware of how these 12 qualities propagate on a flat 2-dimensional surface.

ON A SPHERE, COLORS MOVE WITH THE SUN

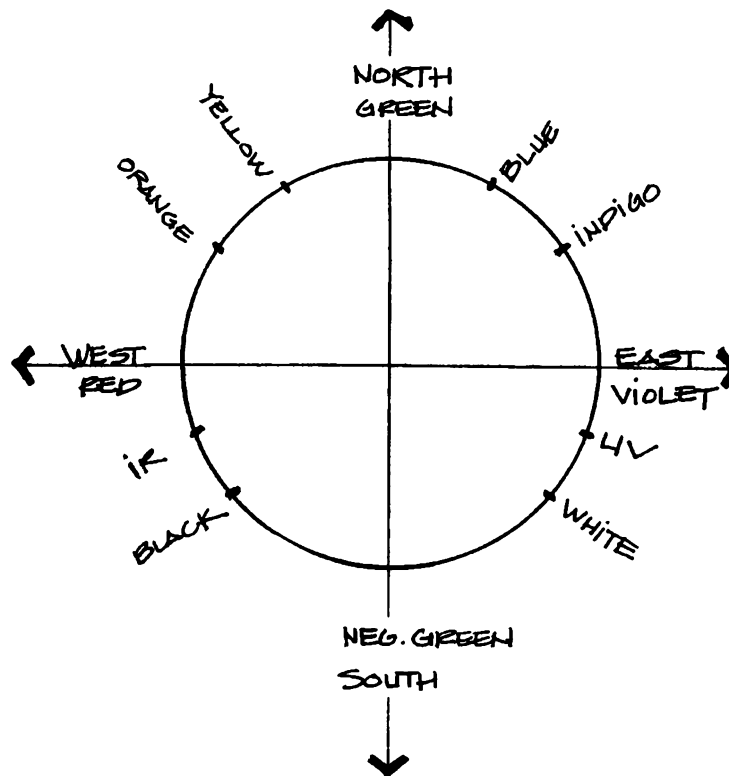

THE 12 ENERGY-QUALITIES IN 2 DIMENSIONS (ON A CIRCLE)

It was discovered that the 12 qualities also manifested in their full spectrum on a circle as well as on a sphere, with the same order as the colors in the wheel of the spectrum. However, an interesting difference was found between the sphere and circle. Recall that on the sphere the position of visible positive Green (hereafter +G) was determined by the location of the Sun, and the other 11 qualities propagated around this position. On the circle the primary determining factor for the placement of the energy spectrum was found not to be the Sun, but rather the magnetic field of the Earth, or the position of the North and South Poles. On a circle +Green is located toward the north pole and Negative Green (hereafter -G) appears toward the south pole.

Because of this, any circle drawn on a piece of paper can potentially be used as a compass to determine the directions of North, South, East and West. (Also needed is a Virtual Cone pendulum, a dowsing tool which can detect the 12-fold spectrum and which will be described shortly.)

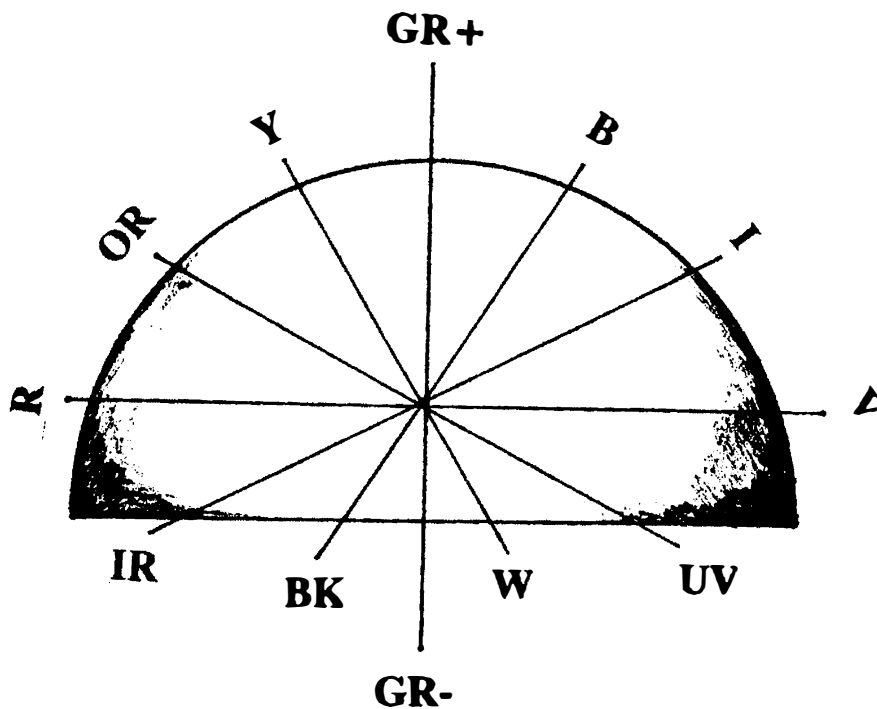

ON A 2D CIRCLE, COLORS ARE RELATED TO THE COMPASS POINTS

LOCKING THE 12-FOLD SPECTRUM IN PLACE (FIXING THE POLARITY)

Chaumery and de Belizal wanted to explore this 12-fold energy spectrum in detail, particularly the intriguing 12th energy of -G. But since the position of the energies on the sphere were constantly moving in accordance with the movement of the Sun, it became very difficult to carry out studies of the energies. What was needed was a way to lock the spectrum of energies into place so that a constant emission could be generated at a set location and then studied.

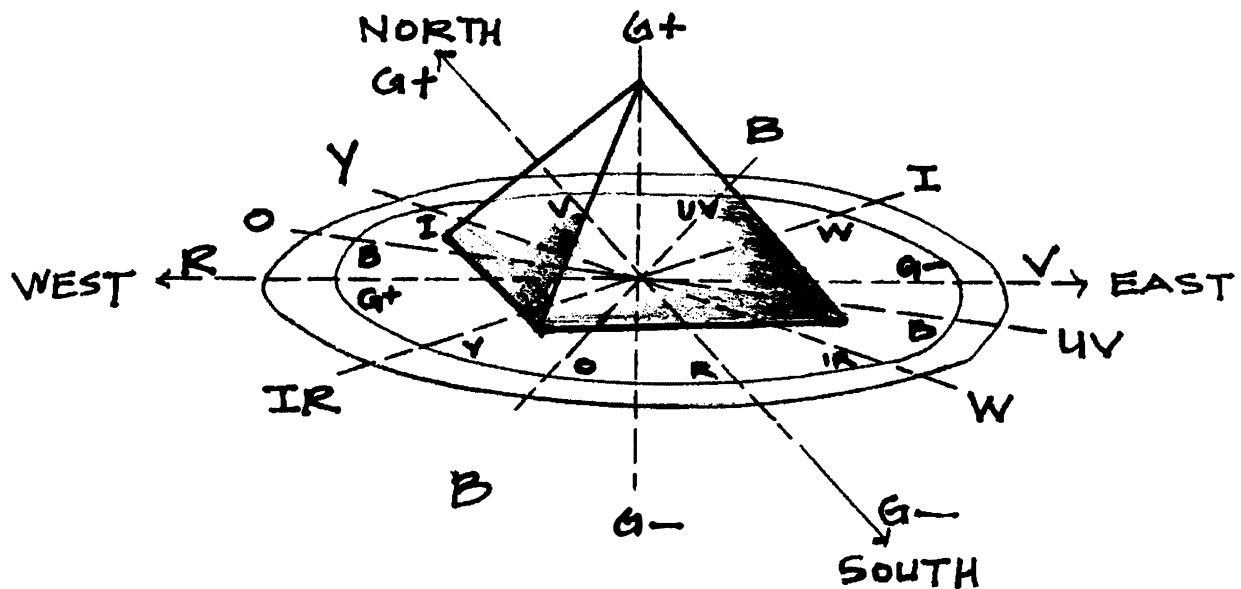

A very simple and effective method was found to achieve this goal. One could simply cut the sphere in half, creating a hemisphere or dome shape. When this is done, the top of the dome will always have +G at the top of the dome and -G will always be emitted out of the base. With this discovery, it became possible to study the energies in detail; this would end up opening the door to rediscovering lost knowledge of the ancient spiritual science, particularly that of the Egyptian tradition.

SEPARATION OF THE SPECTRUM ON A HEMISPHERE

THE HEMISPHERE AND THE PYRAMID

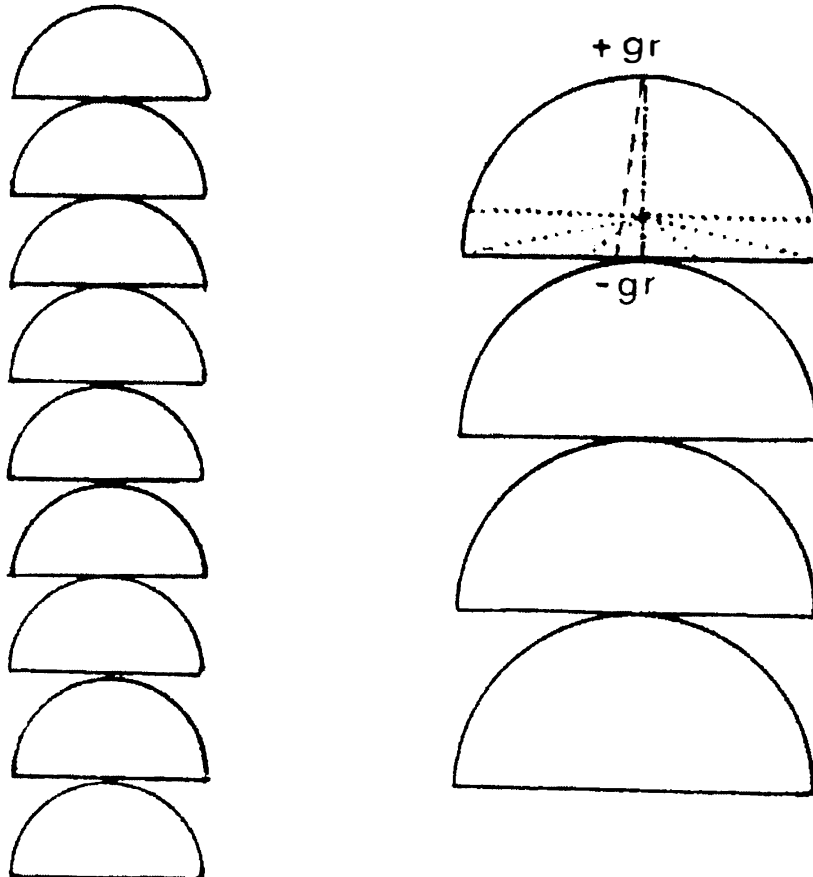

Soon a further discovery was made; that the form of a pyramid was functionally identical to the form of a hemisphere or dome. This means that the pyramid gives $+G$ at the apex of the pyramid and that $-G$ is emitted from its base. This would prove to be a vital key in unlocking the use of the pyramid in ancient spiritual initiation. The $-G$ emission serves as a spiritual carrier wave connecting spirit and matter, as will be detailed later. In ancient times, the pyramid was used as the geometric form in places of initiation to provide the needed $-G$ emission; today it is most common to find the dome used as the preferred geometric form in churches, mosques, synagogues, and other Temples.

Two complete spectral decompositions can be detected in the presence of a pyramid: 1) as shown on the outer circle above an invariable spectrum due to the shape of the pyramid, itself, and 2) a second decomposition shown on the inner circle, also shape-caused, but related to the position of the North-South meridian.

CREATING A GEOMETRICAL EMITTER OF ENERGY

Chaumery created batteries of hemispheres, stacked one above the other, in order to concentrate and intensify the emission of -G. With all of the stacked hemispheres having their bases in the same direction, the cumulative -G coming out of the array became very potent. In time it was felt that 4 was the safe limit for the number of hemispheres to use, although some Radiesthetists used up to 9 hemispheres in arrays for “shock treatment” types of applications.

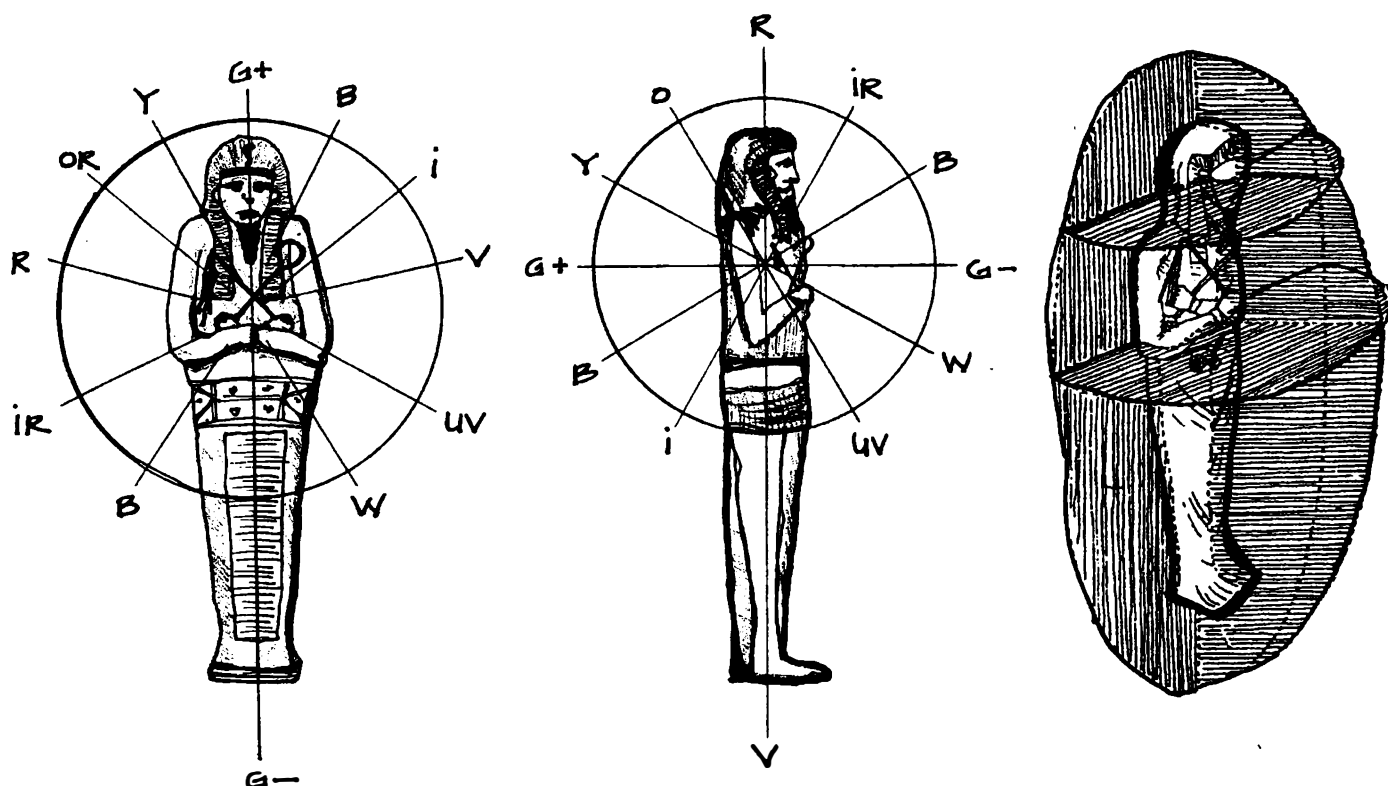

Stacked arrays of hemispheres, or other forms for concentration and amplification of particular energies are called “piles”, “batteries”, or “end-fire arrays” by different researchers. Different vibration-emitting forms can be used in series to create batteries; this key principle was common knowledge in ancient science. Chaumery and de Belizal used analogies with electricity to describe these batteries; the number of hemispheres determined the “voltage” in the battery whereas the diameter of the hemispheres governed the “amperage”.

Chaumery was fascinated with the strange power of -G. It was such a powerful and fine energy that it could penetrate thicknesses of lead shielding

capable of blocking X-rays; it could mummify living tissues, and it could halt organic processes, such as decomposition of foods. -G is present in natural power spots. (Later researchers were to find that the horizontal wave is also present in the energy centers of the human body.) It is a part of cosmic energy that can pass through most solid matter. This is demonstrated by its emission on the opposite side of a sphere from the Sun; only energies that pass through matter can emerge from the other side of the sphere.

The mummification effect of -G is commonly associated with the pyramid form, which makes sense given the fact that the pyramid is a natural geometric -G emitter. The well known "Pyramid power" effect, milk remaining sweet and not spoiling, meat not rotting, and so on, is related to the dehydration/mummification effect of -G. -G was utilized in Egypt to create mummification; the intense saturation of Egyptian mummies with -G makes it extremely inadvisable for anyone to dowse a mummy, for the toxic energies can have severe detrimental effects on the dowser.

Chaumery and de Belizal researched an ancient Egyptian pendulum design known as the “Wadj”, of which models can be seen in museums. Dating from around 2000 B.C., this Wadj pendulum is said to represent a bundle of plants bound together just below the top, symbolizing the principles of growth and prosperity. At the top of the pendulum is a hemispherical cap, which creates an emission of Negative Green measurable out of the base. Just above the base is a double zigzag pattern that has the effect of canceling the harmful vertical wave of the -G. This pattern looks similar to the Aquarius sign of modern Western Astrology, and is prominent in ancient Egyptian hieroglyphs as well.

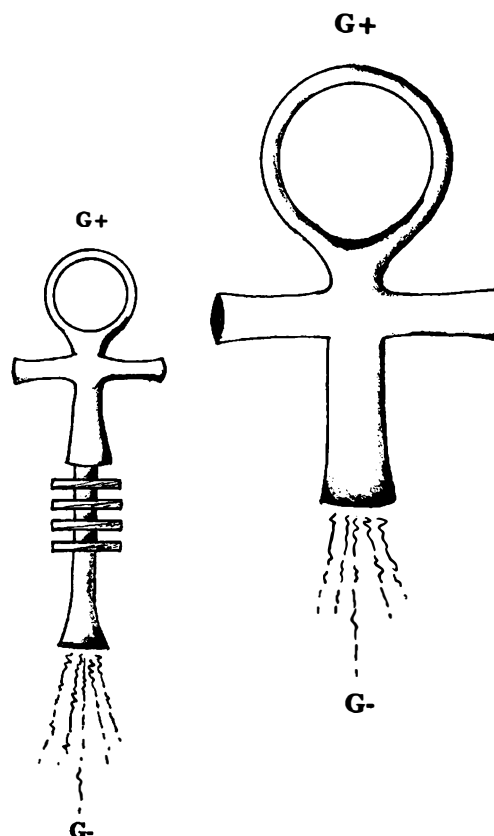

Chaumery and de Belizal found the Wadj to be extremely sensitive and popularized its use in Europe, where today it is sold under the name of the “Egyptian Pendulum”. In essence, they had found that the ancient Egyptians knew the secret of -G and had integrated it into their radiesthesia instruments.

© Ibrahim Karim 2002

As will be discussed later in this text, Chaumery and de Belizal were to create their own pendulum design that they called the “Universal Pendulum”; it contained a small battery of 4 hemispheres inside it to create a strong energy emission from the pendulum. Today models of the Universal Pendulum are available with either 4 or 6 interior hemispheres. There is also a pendulum sold by some European radiesthetists that is a Chaumery-style 4-hemisphere design that is used for -G concentrations. It is sometimes called the “Osiris Pendulum” although that term is felt to be misleading by many Egyptian radiesthetists. As will be discussed later, all multi-hemisphere designs are dangerous to the uninitiated and should be approached with great caution.

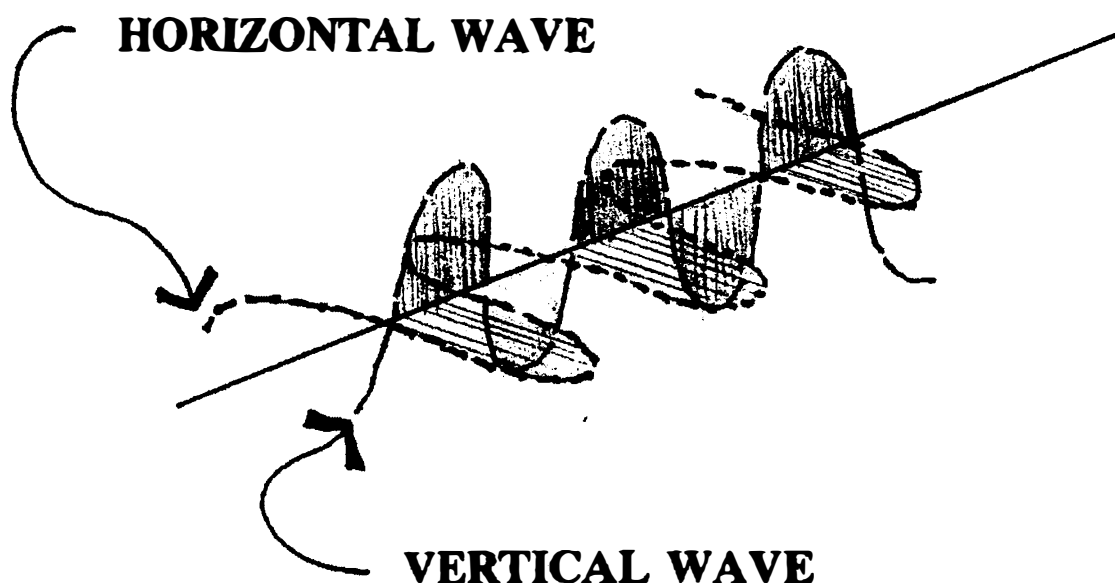

We note that other Egyptian artifacts are essentially geometric emitters of energy. The Ankh is a perfect example of this; its geometric design makes it a strong emitter of -G out of its base.

Shown here are two ankhs, the left ankh on a “battery” or pile for increased power. (This drawing is adapted from an original drawing in *Essai de Radiesthésie Vibratoire*.)

HORIZONTAL AND VERTICAL WAVES

All of the 12 qualities in the vibrational spectrum have two components, a vertical wave and a horizontal wave. This was understood by Chaumery and de Belizal, who termed the vertical wave the “electric” wave and the horizontal the “magnetic” wave. The Virtual Cone Pendulum, their main tool to evaluate the 12-fold spectrum, was designed to easily differentiate vertical from horizontal waves.

Chaumery and de Belizal explained their use of the terms electric and Magnetic waves as resulting from their observations in a series of experiments. The electric wave was found not to cross electrical insulators such as porcelain and Bakelite, whereas it did penetrate iron shielding. The magnetic wave, on the contrary, was found to be blocked by iron screen but not by electrical insulators.

The deeper significance of the vertical electric and horizontal magnetic waves was apparent to de Belizal by the time of his 1968 addition to later editions of *Essai de Radiesthésie Vibratoire*, in which he expressly characterized the two different frequencies. Regarding the horizontal wave, he stated that it was “ . . . [a] pure magnetic frequency which is a beneficial vibration *par excellence*. This is the vibration of GOOD, on the philosophical plane, which re-establishes deficient health to a good condition when

rigorously dosed.” Regarding the vertical wave, he called it “ . . . [a] pure electric frequency, a noxious vibration, and on the philosophic plane the vibration of HARM. This is that which destroys the health and brings about death by unbalancing the vibration of the cell.” (de Belizal , p. 144 of the 4th edition)

De Belizal went on to note that it was possible to kill an adult tree in one week by subjecting it to intense vertical Negative Green energy, and he expressed his belief that scientists in the Communist bloc countries at that time were exploring the weaponization of this detrimental energy. De Belizal also noted that large radar equipment bathed the local environment around it in vertical Negative Green radiation, killing all life in the area through dehydration; he termed this technologically-created vertical Negative Green “the vibration of death.”

The horizontal wave is essential to all life and to maintaining the human connection to beneficent spiritual forces. As we will detail later in this text and in the companion text, horizontal Negative Green (H-G) is the spiritual carrier wave, and it is present in all the energy centers in the human being and other life forms, as well as those on the Earth. It is one of the three essential energies used in Egyptian BioGeometry. Horizontal -G can exist and be used without the vertical wave of Negative Green (V-G), through specific protocols, and indeed, it is essential to separate it from the toxic vertical component. This can be done by simple geometric corrections, such as those built into the design of many Egyptian pyramids.

With regard to mummification, there is a slight effect of that kind from H-G; V-G, however, has a very strong mummification/dehydration effect. People need to be knowledgeable about V-G so that they can protect themselves from its harmful effects.

Simply put, vertical waves are detrimental to living beings, and horizontal waves are beneficial. Living things in the natural world, such as plants, animals, and humans intrinsically have and emanate the horizontal wave and not the vertical; however, vertical energies in the environment can be lodged in the energy fields of living beings and cause disruption to their natural energy balance, causing illness.

All technological energies, microwaves, radio waves, electro-magnetic fields, indeed, radiations of all kinds, have a vertical component. All illness-causing micro-organisms (viruses, bacteria, etc.) have a vertical component. Vertical waveforms in the human energy field may indicate illness, an out-of-balance condition.

THE VERTICAL WAVE OF NEGATIVE GREEN ENERGY

At this stage of our inquiry we will focus on the vertical component of Negative Green (V-G), the most researched and understood of the vertical energy components in the spectrum to date. Anything giving toxic radiation has easily detectable emissions of vertical -G. This includes not only technological energies but also toxic earth energy lines well known to modern dowsers, such as those caused by some underground streams of water. Most dowsers are aware of European (primarily Austrian and German) research suggesting a correlation between underground streams of water and cancer. One of the first discoveries in this area occurred in 1929 when dowser Freiherr von Pohl examined the city of Vilsbiburg and identified houses having toxic earth energy lines from underground water. At the same time a Medical Doctor named Bernhuber collected a list of local residents who had died of cancer in the last 10 years; he found a total of 48 cancer victims from the city. When the houses identified by von Pohl as having toxic energy lines were cross-checked with Bernhuber's list of local cancer victims, they found that all 48 of them had lived in locations identified by von Pohl as having toxic Earth energy lines. Since that time, there have been many more studies supporting these findings; some of these studies have been done under government funding and auspices. Unfortunately, other governments have been less progressive than the Germans and refuse to even study this phenomenon despite over 70 years of compelling evidence from scientific studies.

This phenomenon linking toxic earth energy lines and cancer can be explained by V-G emissions. The toxic emission detected by dowsers above underground streams of water always has strong V-G, as can be determined with a Virtual Cone Pendulum (discussed in a later section). This V-G is also often detected when doing energy dowsing on a cancer sufferer. The Russian researcher Scariatin, who wrote under the name of Enel, was well known as a healer who had much success with cancer patients. He found that the vertical wave of -G in a cancer sufferer could be reduced by increasing the horizontal wave of -G, and vice versa. The horizontal and vertical components can co-exist as we saw in the earlier section regarding domes and pyramids. These shapes are geometric emitters of both kinds of -G unless energetically corrected. But increases in one form of -G tend to reduce the other form.

Chaumery and de Belizal also noted that V-G acts as a carrier wave for other vibrational energies, and this will be described later in this text. Scariatin (Enel) would later clarify that Negative Green is the "Spiritual Carrier Wave", as we will also see later in our narrative.

TECHNOLOGICAL ENERGIES AND ILLNESS

From the discussion at the beginning of this section, we can see something which is quite startling and important - the energies used in our modern technologies and which continuously bathe all life forms now on Earth are identical to the energies of illness. We are now being immersed in man-made vibrational energies that are antithetical to human life and health, and to the natural balance of the Earth itself.

Although the presence of these waves can be clearly detected and validated through vibrational dowsing, it is unlikely they will be recognized or given acceptance by the medical or scientific authorities in Western culture anytime soon. The paradigms and frames of reference of conventional science do not give credence to radiesthesia, resonance effects, or the existence of subtle energies beyond the electro-magnetic spectrum. Also it is highly unlikely that our technological culture, with its vested interests deriving power and wealth from the same new technologies which create these vertical energies, would willingly curtail the intensity of detrimental energies in our environment. On the contrary, the direction of our culture is to constantly increase the intensity of these emissions, as seen in the growing number of cellphone towers, satellite-to-Earth broadcasts, and so on.

Nonetheless, we are faced with the reality of these effects and have to question if the modern epidemics of illness on the physical (Cancer), emotional/psychological (Depression), and immune system (AIDS) levels may be in some way catalyzed by the soup of toxic technological energies of V-G to which we are constantly exposed in modern life.

BIOGEOMETRY CORRECTIONS TO DETRIMENTAL TECHNOLOGICAL ENERGIES

Happily, the science of Vibrational Radiesthesia, especially in the form of the breakthrough BioGeometry work of Dr. Karim in Egypt, has developed a series of simple and elegant experimental corrections to the effects of these toxic technological energies. These are practical methods using geometric forms and Radiesthesia principles to transmute the toxic energies into beneficial energies, a modern form of the ancient science of Alchemy.

BALANCE OF COSMIC AND EARTH ENERGIES

Chaumery and de Belizal considered detrimental energies coming from the Earth (which they termed “noxious waves” or “noxious vibrations”) to be part of a greater context of earthly and cosmic forces. In a report given to the 1954 International Congress of Radiesthesia in Paris they specified that their research indicated an essential balance between two forces: The “Telluric Force” rising from the center of the Earth and the “Cosmic Force” which comes from the solar system, the galaxy, and the entire surrounding cosmos. For any human, animal, or plant cell to grow and develop normally, it must vibrate in balance with the telluric and cosmic forces.

Chaumery and de Belizal differentiated detrimental vibratory waves into two components. The first is a carrier wave connected to Negative Green. It is similar in function to a Hertzian wave, which can carry a secondary wave. The second component is the wave that is carried on the carrier wave. They note that it is similar in principle to the modulating wave of radio, but it is in reality (in their words) “an illness wave”.

Based on this context, Chaumery and de Belizal reported that the noxious waves coming from the Earth, such as those detected in the Von Pohl study described above, demonstrate the telluric force manifesting without the necessary counter-balance of cosmic forces. Under normal circumstances, cosmic forces balance and hold the detrimental telluric forces. Acting alone, their effect is unchecked.

Telluric force in essence provides the Vertical Negative Green carrier wave to transport a modulating wave of illness; this wave of detrimental vibration (carried as information on the telluric force like a radio program on a Hertzian wave) may emanate from any number of toxic sources such as polluted water, a sewer, microbes, a graveyard, a dry radioactive fault, etc. The juxtaposition of different layers of minerals in the fault can act as a battery for the radiation similar to the battery of hemispheres emitting vertical Negative Green used by Chaumery (and similar to Wilhelm Reich’s concept of an “orgone accumulator” based on multiple layers of different substances).

Chaumery and de Belizal found that the noxious energy could only be carried into an area as radiation when something had happened to remove the cosmic force from the local energetic equation, an event they termed a “rupture of the compensating forces”. Chaumery and de Belizal asserted that many common physical and mental ailments originate in the noxious emissions from the Earth. They noted that in China, a culture with much ancient spiritual wisdom, building ensues only after a consultation with experts to

ensure that a project is not sited where these toxic energies, or “Dragon Lines”, persist.

Chaumery found several approaches to shielding homes from these energies, including packing Kaolin clay 20 cm deep in the basement of a home. Since their time BioGeometry has made major advances toward simple and effective transmutation of these energies, as will be discussed later in this narrative.

DETECTING THE VIBRATIONAL ENERGY SPECTRUM: THE VIRTUAL CONE PENDULUM

Chaumery and de Belizal developed two main tools to detect and analyze the 12-fold spectrum. The main one, used today in Egyptian BioGeometry and in The VESICA INSTITUTE trainings to enable students to directly detect these energies, was called by Chaumery and de Belizal the *Cône Fictif*, this term translates into English as the “Virtual Cone” Pendulum. This is an excellent and very sensitive detector of the Twelve Qualities, and it is both safe and easy to use. In this book, we will focus on the Virtual Cone as the pre-eminent and indispensable tool for working with the 12-fold vibrational spectrum.

Another tool developed by Chaumery and de Belizal is the Universal Pendulum. It is based on the form of a sphere and contains stacked hemispheres inside to amplify energy emissions. The Universal Pendulum both detects and emits the 12 qualities. Because it has the capacity to emit all the different waves, including the toxic vertical wave of -G, it is best reserved for the use of those knowledgeable and experienced in Scientific Radiesthesia. We will discuss this tool briefly in the next section. (Note: some researchers, including Chaumery and de Belizal, assert that the Virtual Cone is also an emitter; however it is an emitter only in the sense of general resonance, and not a specific energy-amplified emitter as is the Universal Pendulum with its multiple internal hemispheres. This will be clearer as the narrative progresses.)

Below we briefly review key aspects of the Virtual Cone and how it works.

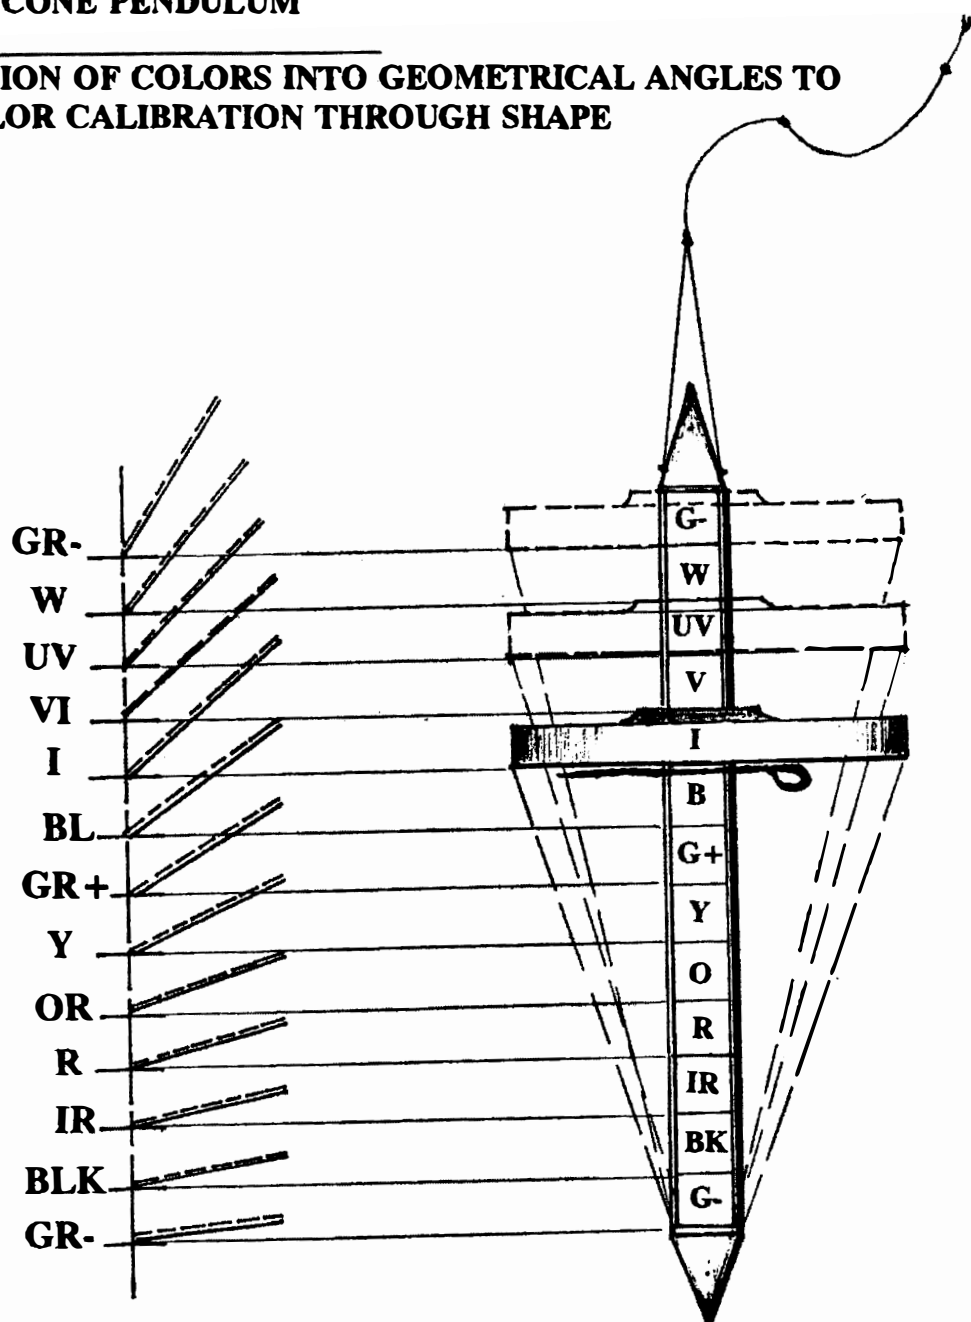

STRUCTURE OF THE VIRTUAL CONE

The Virtual Cone pendulum (hereafter abbreviated as simply V.C.) has two main pieces: the first is a straight rod with letters at different heights of the

rod. The 12 qualities of the spherical and circular spectra are represented on the V.C. in a straight line; -G is at the base, then proceeding upwards, Black, IR, and so on as the entire sequence of energies is completed with a return to -G at the very top of the pendulum. Fitting over the rod is a movable disk which can be fixed on any of the thirteen spectral settings on the rod. The disk features a raised lip on one side, around the central hole of the disk.

VIRTUAL CONE PENDULUM

**CONVERSION OF COLORS INTO GEOMETRICAL ANGLES TO
GIVE COLOR CALIBRATION THROUGH SHAPE**

THE KEY PRINCIPLE OF THE VIRTUAL CONE: CONVERTING GEOMETRIC ANGLES INTO VIBRATIONAL FREQUENCIES

The V.C. is based on an important principle of Sacred Geometry - specific angles correlate to specific vibrational frequencies. In this case, a given angle will resonate with one of the 12 qualities in the 12-fold spectrum. This is similar to the physics principle wherein a particular geometric angle of refraction in a prism gives rise to a specific color frequency.

The virtual cone actually represented by the name of this pendulum is created by the angle between the bottom tip of the pendulum and the lower edge of the disk. The angle of this virtual cone changes from shallow to steep as the disk is raised to higher positions on the rod.

THE HIDDEN SECOND VIRTUAL CONE

An important bit of practical knowledge shared with me by Dr. Karim was that there are actually two virtual cones energetically present in the Virtual Cone Pendulum. The first is the virtual cone just described, created from the tip of the rod to the bottom outer edge of the disk at any of its different settings to detect specific energies. The second is created between the place one holds the string suspending the pendulum and the top outer edge of the disk. It is the interaction of these two virtual cones that fine-tunes the resonance of the pendulum with the energies.

One of the practical ramifications of the interaction of these two virtual cones creating accurate readings is that different-sized disks can be used on the same rod and still produce accurate results, even though the angle from tip of rod to bottom outer edge of disk may be altered, by simply changing where one holds the cord of the pendulum in compensation.

DETECTING HORIZONTAL AND VERTICAL ENERGIES

In their original texts, Chaumery, de Belizal, and Morel gave no direct information regarding the use of the Virtual Cone Pendulum for distinguishing between vertical and horizontal waves (termed electric and magnetic respectively by the French researchers). Chaumery himself -- the chief developer of the tool -- simply noted to always place the disk on the rod so that the lip was facing up.

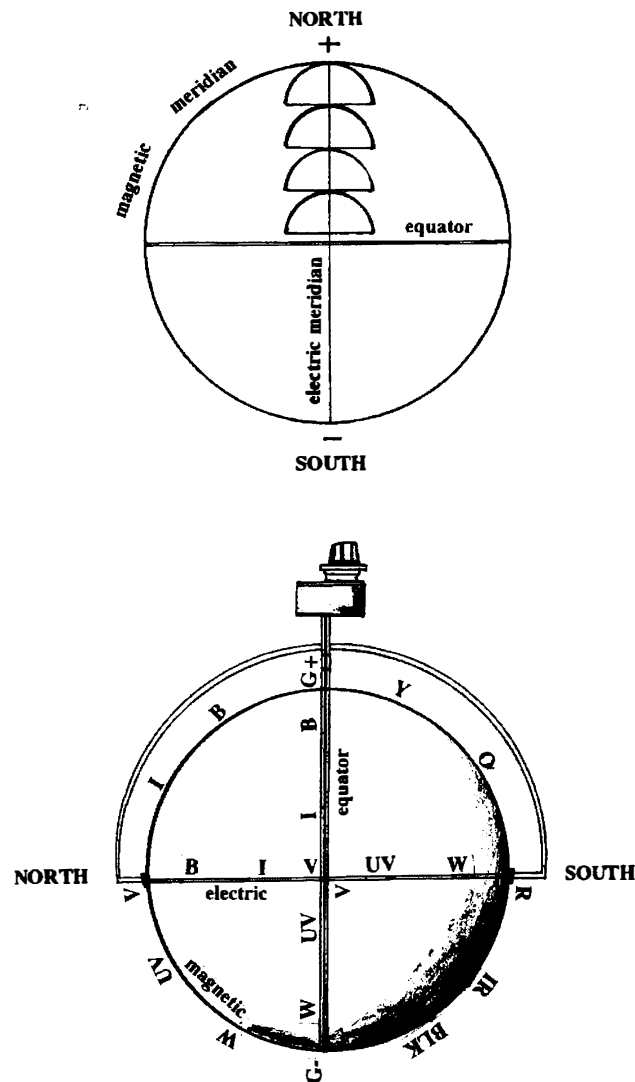

Behind this instruction is the implication that the lip can also be placed down when the disk is over the correct setting on the rod; this has the effect of raising the disk slightly higher on the rod, changing the angle of the resultant virtual cone slightly. When the lip on the disk is up and the disk is over a particular setting on the rod, the horizontal wave of that energy is detected. When the lip on the disk is down, the vertical wave of that energy is detected. Herein lies the reason why Chaumery did not clarify this principle of V.C. use: he did not want people getting into trouble using the V.C. to detect the detrimental vertical energies. Given his fate, we can understand his concern. However, as we will detail in a coming section, it was not using the V.C. to detect V-G that cost Chaumery his life. It was more likely his construction of multiple V-G emitters in end-fire arrays, multiplying their energies to fatal levels.

To take advantage of the breakthroughs described in this text, it is vital to completely understand how to use the V.C.; the principle of turning the disk one way or the other to detect either vertical or horizontal waves is particularly critical. It is sometimes necessary to detect V-G. For reasons to be discussed later, however, we should keep V-G detection to an absolute minimum and thoroughly cleanse ourselves energetically after any contact with V-G.

ADVANCED DETECTION AND EMISSION OF THE ENERGY SPECTRUM: THE UNIVERSAL PENDULUM

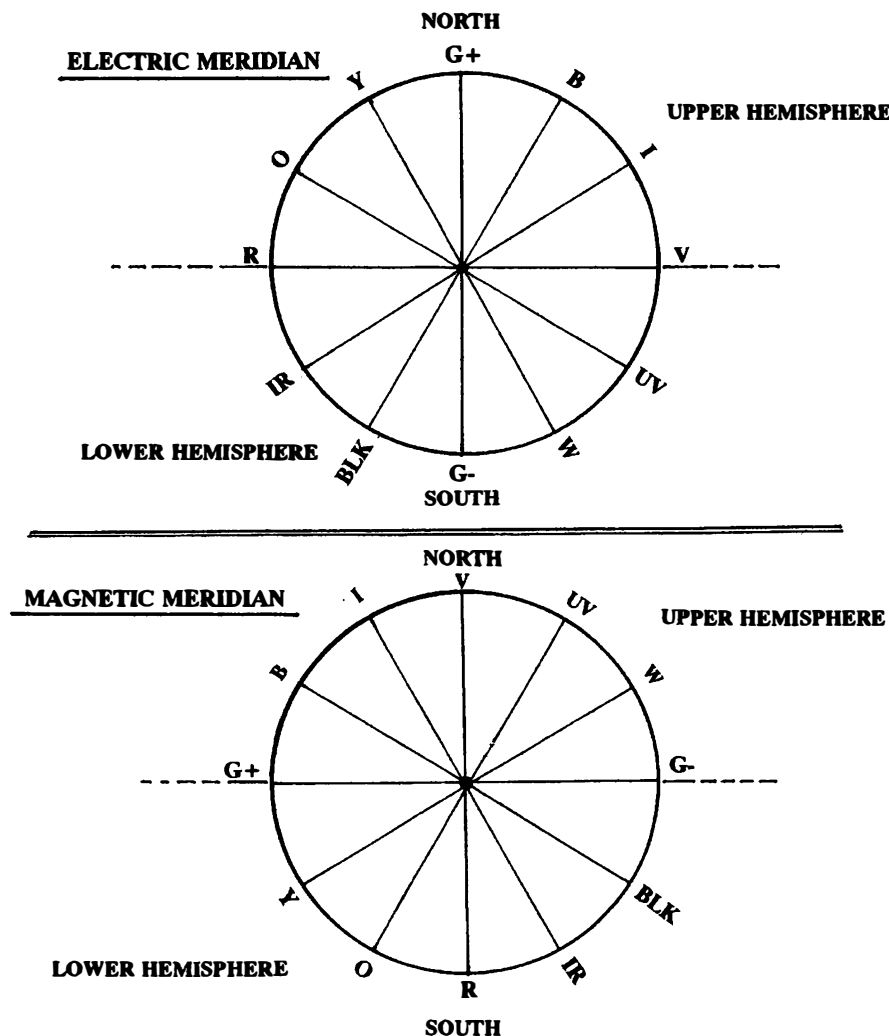

The primary tool to detect and work with the 12-fold energy spectrum is the Virtual Cone Pendulum just discussed. The second tool which can be used for this purpose is the Universal Pendulum, invented by Chaumery and de Belizal in 1936. The first version was a sphere weighing 125 grams and measuring 60mm in diameter.

The spherical Universal Pendulum has two energy meridians at right angles between the north and south poles of the sphere and one energy equator (the horizontal great circle dividing the sphere into north and south hemispheres). One of the energy meridians is referred to as electric and the other as magnetic. The energy equator is termed “electromagnetic”.

These three energy lines are “great circle” lines, meaning that they all form perfect circles of the widest diameter possible on the surface of the sphere, and their centers coincide with the center of the sphere.

The Universal Pendulum (hereafter abbreviated simply as U.P.) is designed with a non-ferrous metal handle connecting the north and south poles of the Sphere; it can be moved over any longitude line on the sphere. The cord suspending the pendulum connects to this metal handle, and can slide to any position on the handle (latitude line) from the north to the south pole. The combination of the full 360-degree movement of the handle and the ability of the cord to slide to any position on this handle means that the pendulum can be suspended in such a way that any point on its surface can be held over an object for detection or emission of specific energy vibrations.

The electric meridian has the totality of the visible 7-fold color spectrum from Red to Violet on the northern hemisphere of the U.P. The continuation of the electric meridian on the southern hemisphere of the U.P. has the complete 5-fold invisible energy spectrum, UV, W, -G, B, IR. The magnetic meridian has in the Northern hemisphere also 7 vibrations, but in this case, 4 of these are in the visible range (G, B, I, V) and 3 of them in the invisible range (UV, W, -G). The rest of the 12-fold spectrum on the magnetic meridian is in the southern hemisphere of the U.P. (visible Y,O,R and invisible IR and B).

The energy equator has the full 12 energies propagated along the equator's great circle; the visible green energy location on the energy equator coincides with the position of this same visible green energy on the magnetic meridian as it crosses the equator.

THE 12 DIVISIONS OF NEGATIVE GREEN ON THE UNIVERSAL PENDULUM

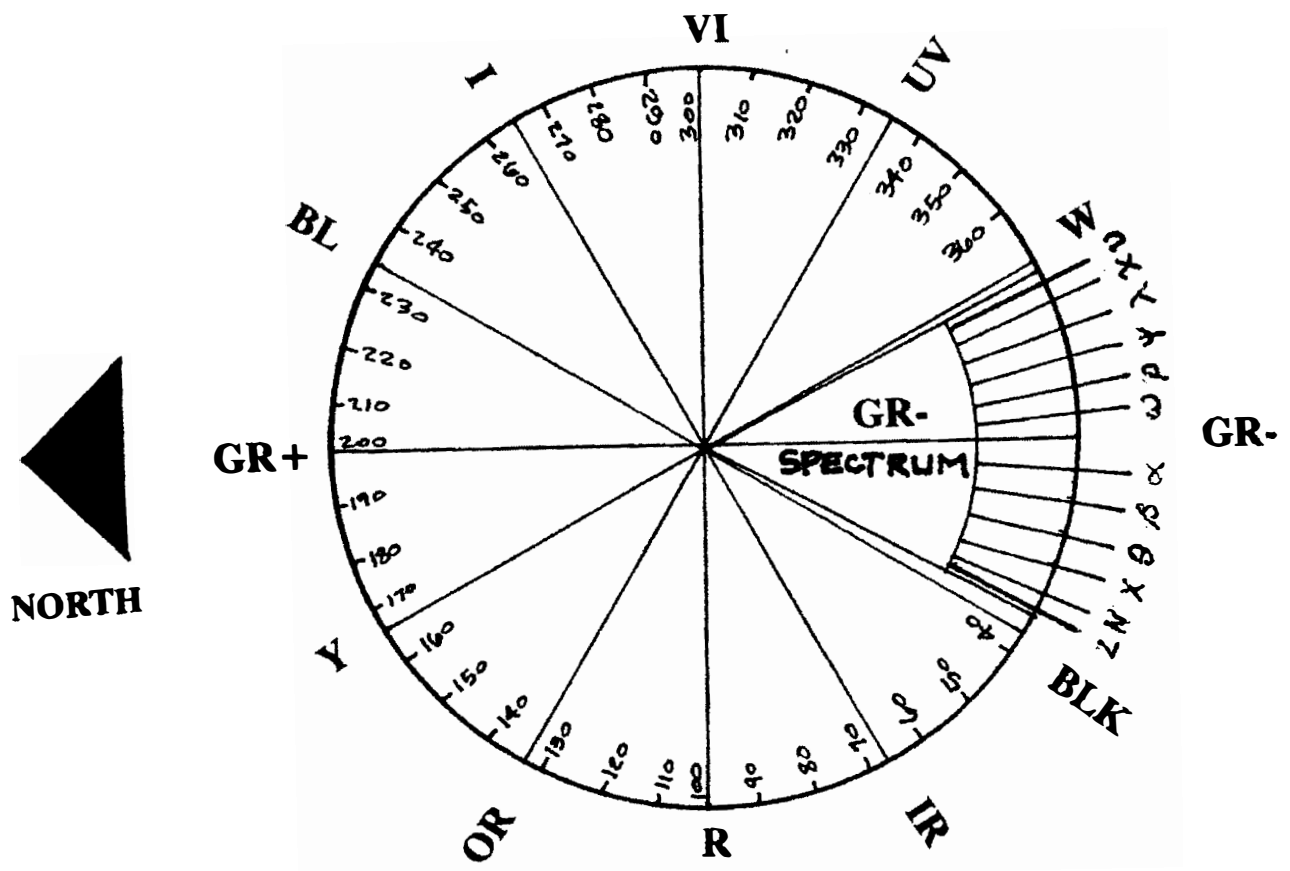

Another interesting aspect of the U.P. is its explicit markings for 12 sub-divisions of -G, which are named with Greek letters. Chaumery and de Belizal divided the circle of the 12 energies into 400 degrees rather than the customary 360 degrees. In this 400 division system, the 12 sub-divisions of -G are marked as degrees from 0 in the center of the Negative Green band at the following locations:

Between -G and Black:

- 5 degrees: Alpha
- 10 degrees: Beta
- 15 degrees: Theta
- 20 degrees: X
- 25 degrees: Nu
- 30 degrees: Zeta
- 33.5 degrees: Beginning of the Black section of the spectrum.

Between -G and White:

- 395 degrees: Omega
- 390 degrees: Rho
- 385 degrees: Psi
- 380 degrees: Lambda
- 375 degrees: Chi
- 370 degrees: Epsilon
- 366.5 degrees: Beginning of the White section of the spectrum

FURTHER RESOURCES

Today there are two basic versions of the Universal pendulum available: a smaller version that has 4 hemispheres inside of it, and a larger version with 6 hemispheres inside of it. Both are sensitive detectors and strong emitters of the 12 energies, with the larger version with its larger number of hemispheres, of course, being the stronger emitter.

We recommend that one master the Virtual Cone Pendulum before using the Universal Pendulum. Be aware that the U.P. is capable of toxic energy emissions; for this reason always leave the U.P. set on the visible green position on the energy equator when not in use and NEVER on the -G position when not in use.

THE CRITICAL PRINCIPLE OF RESONANCE

In modern Egyptian BioGeometry and the The VESICA INSTITUTE trainings, we do not use the multiple-hemisphere devices described earlier in this text. The discussion below regarding how Léon Chaumery met an unpleasant fate will clarify why this is so.

THE DEATH OF LEON CHAUMERY

The fate of Léon Chaumery is evocative that of other pioneers innocently exploring new forms of energy. Just as the French scientist Madam Curie met her death by radiation exposure from radium (at that time, no one understood that radium emitted lethal radiations), so was Chaumery killed by exposure to concentrations of the vertical wave of -G.

In the previous section, we mentioned that Chaumery was experimenting with -G and making powerful arrays of multiple hemispheres, creating a composite “geometric emitter” of -G. Although he knew how to differentiate the vertical and horizontal waves of -G, (reversal of the sliding disk on the virtual cone pendulum distinguishes between the two), he and de Belizal did not make the knowledge public in their writings (see the earlier section on the Virtual Cone). Apparently he did not fully understand these energies, nor did he know how to cancel or transmute the detrimental vertical wave of -G. This information is now a key part of modern BioGeometry training.

Léon Chaumery was found dead in his laboratory by his friend de Belizal on February 27, 1957, less than a year after the publishing of their major

work *Essai de Radiesthésie Vibratoire*. De Belizal published a warning about the power of -G in his foreword to his second and last book (*Physique Micro-Vibratoire et Forces Invisibles*, written with P.A. Morel), stating that Chaumery “had been in effect a victim of his experiments and completely dehydrated by the negative green ray. At that time we had not yet found the vibrational antidote...”. This vibrational antidote which de Belizal found with P.A. Morel was the use of the +G energy, which de Belizal believed “neutralized all stored radioactivity in the organism.” (Quotes from p. vii of the 1976 edition of *Physique Micro-Vibratoire et Forces Invisibles*). Since that time at least two other vibrational antidotes to vertical -G have been found.

As de Belizal noted, Chaumery had essentially been mummified alive by the -G emitters he had constructed. The death of Chaumery had a chilling effect on Scientific Radiesthesia circles in France, leading to the rise of mental/psychic dowsing as the pre-eminent form of Radiesthesia in France and the decline of the great French scientific dowsing school.

THE REALITY OF RESONANCE

Most Radiesthesists assume that Chaumery’s death by -G came by his being directly in the line of emission of the concentrated radiation coming out of the multiple hemisphere end-fire arrays in his lab; it is also possible that the multiple emitters concentrated too much vertical -G into the ambient environment of the room.

We should take heed, however, of a critically important insight coming from Dr. Ibrahim Karim, the legacy holder (as we will see) of the work of Chaumery, de Belizal, and other great French Radiesthesists. He has moved the work immeasurably forward with his BioGeometry approach. Dr. Karim believes that Chaumery was well aware of the -G emissions from his devices, and that he would not have put himself carelessly in the way of these direct emissions.

However, it is likely that Chaumery thought about these energies in a simplistic and materialistic manner, one common to most researchers in the present day as well. Many people think in a reductionist manner, that “emitting energy and receiving energy” is a finite and materialistic energetic interaction similar to those studied in modern Physics. One who thinks in this way will assume that merely keeping away from the direct emissions of these devices leaves one safe from their effects. From a more accurate spiritual and metaphysical understanding of the process of Resonance, however, this materialistic belief ignores the most important aspect of human interaction with these energies.

Dr. Karim's point is that all living beings are in Resonance with things in their environment to which they are linked vibrationally. Chaumery had designed and built a large number of these -G emitters, all of which were constantly pouring out vertical -G. Chaumery was thus in resonance with his creations, and this resonant link led to his poisoning and death by vertical -G.

Although many readers may find this fanciful, I believe Dr. Karim is correct in his understanding of Resonance as a deeper spiritual process. The 12 energies in this spectrum, especially -G, are all spiritual in nature. We interact with them all the time in ways that go completely unnoticed by the majority of modern people. This understanding of Resonance in relation to the tragic death of Léon Chaumery stands behind why Egyptian BioGeometry and The VESICA INSTITUTE trainings do not include work with multiple element vertical -G emitters. The essential points are these:

1. We are in resonance with everything we create, everything we focus our attention on, and everything we dowse.
2. Accordingly, we want to minimize our exposure to vertical -G, including strictly limiting the amount of time we expose ourselves to it through dowsing toxic earth energy lines, electro-magnetic radiation, and disease emanations.
3. Instead of -G, we should focus our attention and our dowsing primarily on those energetic components which strengthen our immune system, balance us energetically, and link us to higher beneficial states of consciousness and spiritual forces, especially the three key energies called the BG3.

We need to bear in mind that the energy spectrum on which our current civilization bases its science -- the spectrum of Hertzian electro-magnetic waves -- has only been elaborated and understood in the last hundred years or so. Our understanding of the 12 spiritual energies spectrum and its sub-components is also in its infancy.

The Electro-Magnetic (EM) spectrum has become such a fundamental part of our contemporary scientific understanding that it is easy to forget just how recent and fragmentary this knowledge is. There are numerous esoteric scientific and spiritual perceptions that place the EM spectrum into a larger context.

One example known to many in the alternative science community is scalar energy. Nikola Tesla's work included research on scalar technologies. He felt that scalar waves are a superior counterpart to what he termed the "retarded" EM waves which travel slower than light. Another example is the work of the Rosicrucian spiritual scientists around Rudolf Steiner on the "Four

Ethers”, which shows the EM energies to be decayed forms of specific Etheric life energies and formative forces. This latter understanding connects well with the French/Egyptian research on Vertical -G as a toxic energy whereas Horizontal-G is beneficial. Although more research is needed, it may be that Horizontal-G is “unfallen” etheric energy and V-G is the “fallen” etheric force that has begun to decay into Hertzian electro-magnetic energies.

PART TWO

ENEL AND THE SPIRITUAL ASPECTS OF NEGATIVE GREEN

“Enel” was the pen name of a White Russian living in Egypt following the Bolshevik Revolution; his real name was Scariatin. He wrote a series of books on Egyptian mysteries before writing his first book on Radiesthesia in 1949, *Premiers Pas En Radiesthésie Thérapeutique*, (First Steps in Therapeutic Radiesthesia), published by Dar Al Maaref in Cairo.

THE OMEGA BAND OF NEGATIVE GREEN: SPIRITUAL VIBRATION

Enel was the first to conclude that Negative Green was an essential energy existing in every human being. He found that it included a specific sub-band that he called the Omega vibration (also known as the Pi-Ray). This was an extremely important spiritual energy that became highly intensified within the human energy field when one prayed. He created a scale from 0 to 350 to measure this Omega vibration; ordinary people rate between 10 and 25 on this scale, but major prophets such as Moses, Jesus, or Mohammed rate 350.

Enel made a project of measuring the level of Omega vibration at the tombs of the Christian Saints in Egypt, and found tremendously high levels. This high concentration of -G in the body of the Saints accounts for the phenomenon of the “incorruptible body” of Saints, a phenomenon acknowledged by both Eastern and Western religions. The constant prayer and spiritual connection which the saints held created these high concentrations of -G, which, as we have seen, keeps non-living bodies from decomposing. This phenomenon is the basis of the saying “The Earth eats not of the Bodies of the Saints”.

CAUSES OF DROPPING TO ZERO ON THE OMEGA SCALE

It is possible for human beings to drop to zero on the Omega scale for various reasons due to physical or spiritual contamination. One example on the physical side is the eating of pork; there is a good reason why so many spiritual traditions hold pork to be unclean and unfit for consumption. Eating pork can bring one down to zero on the Omega scale, and it takes many hours before the body’s energy field recovers. The drop can be measured through radiesthesia. This effect has confirmation from other perspectives as well, for instance, in the 1900’s, by the Rosicrucian researchers following up indications by Rudolf Steiner into Etheric life energies. These researchers developed methods to crystallize blood in ways that revealed Etheric energy patterns (see *Sensitive Crystallization*, by Ehrenfried Pfeiffer). They found that the blood crystallization pattern of a person who eats pork is identical for about a day following consumption to a person who has full-blown cancer.

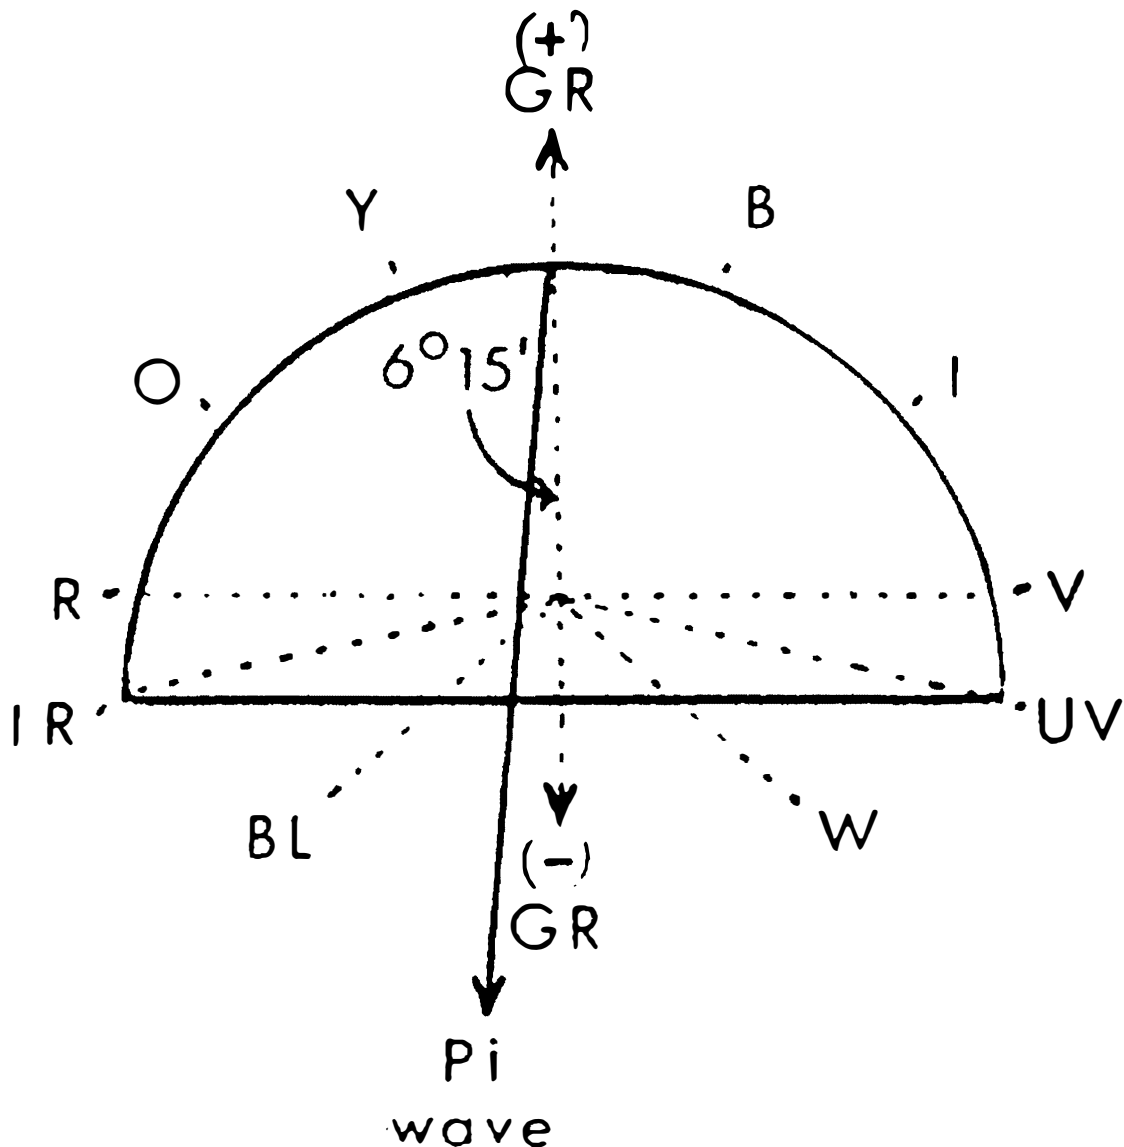

An example of a spiritual cause of falling to zero on the Omega scale is the making of a connection to detrimental spiritual beings. In the Middle East this is commonly found among those who work with harmful entities known as the Djinn, who are referenced in many Arabic texts. Contact with the Djinn over time will reduce the Omega level to zero, as well as lowering the 3 key

components of spiritual energy. This is one manifestation of the harmful effects of what is often called “gray” or “black” magic. There is also an increase in a particular sub-band of Infra-red that a person connecting with these beings manifests; it is this IR to which entities attach in a person’s field. The Egyptians use the “L” pattern to add Gold to a person’s field and reduce the IR to the point that the entities disconnect from the field. Later in our narrative, we will see that the BioGeometry tools developed by Dr. Ibrahim Karim reduce the detrimental component of IR, as demonstrated by scientific analysis.

NEGATIVE GREEN IS THE ‘SPIRITUAL CARRIER WAVE’

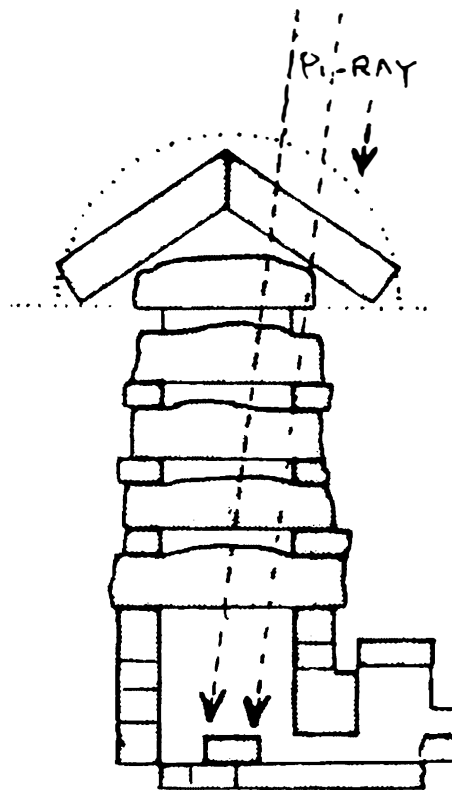

One of the consequences of Enel’s discovery was his extension of Chaumery and de Belizal’s finding that Negative Green is a carrier wave that can carry other waves the way Hertzian waves carry modulated waves in radio transmission. Enel realized that -G was essential for energetic connection between the spiritual and physical worlds. In this way, -G could be termed a Spiritual Carrier Wave, an energy connecting the spiritual and physical worlds. Dr. Karim clarified this aspect of Negative Green in his teachings, and he linked it to his discovery of two other vital energetic components of spirituality: the Higher Harmonic of Ultraviolet and the Higher Harmonic of Gold. Remember that Chaumery and de Belizal had found that -G is that energy which can pass through solid objects without being stopped or deflected, logically making it the natural carrier for energy and consciousness between levels of physical creation or between the physical and spiritual worlds.

THE PI-RAY AND THE GREAT PYRAMID

The Pi-Ray, related to the Omega vibration discussed at the beginning of this section, is located within the -G band at 6 degrees 15 minutes off of the vertical axis, between the center of the -G band and the Black band in the 12-fold Spectrum. We find it apparent that the ancient Egyptians were aware of the Pi-Ray because of the way the King's Chamber of the Great Pyramid is constructed. In the King's Chamber is a granite "Sarcophagus", which some esoteric traditions believe was the place of spiritual initiation in the Egyptian mysteries. The initiate would lie for three to three-and-a-half days in "Temple Sleep" while his spirit traveled through higher worlds. Above the Sarcophagus

in the King's Chamber are four enormous horizontal stones with spaces between them, and a triangular formation of blocks above the four stones. These four horizontal blocks are arranged in the manner the French radiesthesists would call a pile or a battery, with the triangular arrangement of blocks above creating a virtual hemisphere: together they create a further intensification of -G emission beyond what the pyramid already emits through its geometric form. This structure and the sarcophagus beneath are set off from the central axis of the Great Pyramid toward the South side about 10 meters; this places the whole structure at the 6 degrees 15 minutes geometric location of the Pi-ray.

Thus, the place of Initiation within the Great Pyramid is precisely located to be bathed in the Pi-Ray, the most optimal sub-band of the -G spiritual carrier wave, demonstrating the advanced knowledge of the Egyptian spiritual scientists.

SCARIATIN'S HARD LESSON ON HEALING AND CLEANSING

In addition to his pioneering work in establishing the importance of Negative Green as a spiritual energy, Scariatin was known for his ability to use radiesthesia techniques for healing purposes. In particular, he was reputed to be highly successful in extracting cancers from terminally ill patients, leading to miraculous recoveries. Scariatin believed that illnesses are vibrational in nature and thus can be extracted through the correct radiesthetic protocols.

Unfortunately, and like Chaumery in his Negative Green research, what Scariatin did not fully understand -- and for which he paid a terrible price -- was that anyone involved in this kind of healing and radiesthetic extraction of illness must ensure that toxic vibrational energies from the ill patients being treated do not accumulate in one's own body. Many years into his healing work, Scariatin became riddled with exotic cancers, and they ended his life. In his final days, Scariatin told his private students what had happened and directed them to always discharge the toxins they picked up in their healing work into water at the end of their sessions so that they could avoid his fate.

THE BIOGEOMETRY APPROACH TO DOWSING, CLEANSING, AND ENERGY BALANCING

Although the topics in this sub-section will only become clear later in this narrative, it is important to raise them in relation to the cleansing concerns elucidated by the Scariatin story. In BioGeometry students are taught to limit the time they dowse any toxic energy radiations such as V-G emissions, and to avoid dowsing toxic radiations altogether when possible. The key concept here is that we are in resonance with anything we dowse. Dowsing detrimental energies of any kind should be kept to a minimum. Instead of toxic energies the focus should be on dowsing the key energies of Life and Health, such as the BG3 described later in this text, and especially the Higher Harmonic of Gold energy.

In modern BioGeometry training students are taught to immediately create an energy clearing geometric gesture making a cross with the forefinger on the forehead after dowsing any detrimental energies. This immediate clearing technique should be followed by washing the hands and running water over the head at the earliest opportunity (a complete shower is preferable). Students are also advised to thoroughly check themselves out once a week by evaluating their internal organs and energy systems through

particular dowsing protocols; any energetic imbalances found should be immediately balanced with BioSignatures or other means in order to avoid any health problems, whether associated with their radiesthesia work or not.

PART THREE

THE EGYPTIAN RENAISSANCE OF PHARAONIC SCIENCE

The work of the French, inspired and informed by their rediscovery of the knowledge and techniques of the ancient Egyptians, came full circle to its point of origin. In the ancient Egyptian high culture, the Pharaoh and the priests of the Temples were masters of radiesthesia, as is demonstrated by the surviving pendulums and spiritual sites they created. At the end of the Egyptian high period, the deeper initiation knowledge went underground to private circles of wisdom keepers and became foundation knowledge for later Western esoteric groups such as the Freemasons and the Knights Templar. The Initiation knowledge had become virtually invisible to any observers by the end of the Ottoman period, until in the twentieth century Yakob Al-Khozami in Luxor became known for using Pharaonic knowledge to heal many Egyptians.

THE LIFE AND WORK OF DR. KHALIL MESSIHA

Yakob Al-Khozami passed on some of his Pharaonic knowledge to a medical doctor and artist, Dr. Khalil Messiha (born April 4, 1924 in Cairo Egypt). Dr. Messiha met Al-Khozami's friend and associate Dr. Louise Labib in 1960, leading to his learning how to dowse with the ball pendulum. Dr. Messiha began an intense study of the radiesthesia texts of Enel and other great researchers of the French school, leading to his founding, with his associate Anba Grigorious in 1960, the parapsychology group at the Coptic Institute of Higher Studies. This group explored the practical applications of radiesthesia in many areas of scientific research. Dr. Messiha popularized Radiesthesia through lectures, using the Arabic term *Al-Moga Alzatia*, literally the "self-vibration", as the translation of "radiesthesia".

Dr. Messiha became known for his great success in using radiesthesia in his medical practice, needing only a sample of hair, blood, or sputum, the classic radiesthesia "witness", to diagnose a patient's ailments and then treating them using combinations of orthodox and alternative treatments. Dr. Messiha introduced a different method of radiesthesia diagnosis using just a person's fingerprint rather than the standard witnesses mentioned, asserting that the fingerprint was not only safer to work with (being non-infectious) but

also was effective for a longer period of time than the fluid samples. Dr. Messiha developed a healing system of “Biotronic” preparations that were activated by Pharaonic methods.

DISCOVERIES IN THE GREAT PYRAMID

In 1967 Dr. Messiha applied to the Egyptian Antiquities Department for official permission to conduct research on Giza plateau. Later that year he was to state that he would help to open the way to the “Hall of Records”, although he himself would not enter it; he further stated that the Hall of Records could be entered around the year 2000. In the Great Pyramid he quickly found through dowsing the presence of a corridor and another chamber beneath the so-called “Queen’s Chamber”. (An illustration of his discovery can be found at <http://geocities.com/Paris/Salon/7129/Hallofrecords.htm>)

He was removed from the site after being allowed to work there only ten days, and an American group using electronic equipment (the Cosmic Rays project) was given access to the Pyramids instead. The American group totaled up four years of access yet made no significant findings -- probably due to the vibrational energies on the site (which can be detected and studied with radiesthesia) scrambling the measurements of their electro-magnetic equipment -- in contradistinction to Dr. Messiha who made major discoveries in less than 10 days. Although Dr. Messiha had been promised that access to the Pyramids would be restored after the American project was completed, he was put off until 1986 when he began to study sites other than the Pyramids themselves, leading to his study of the Sphinx at Giza.

FLIGHT IN ANCIENT EGYPT

Between these periods of research at Giza, Dr. Messiha made what would become one of his most publicized discoveries. In the Egyptian Museum of Antiquities in Cairo, he found an object, classified as a “bird statue”, which was discovered near the Saqqara step pyramid in the 1898 French excavations. He saw that this object was markedly different from the other bird figurines in the collection, having no legs and with a smooth airfoil design of straight tail and wings. Dr. Messiha made a balsa wood model to the exact specifications of the museum model and added a tail stabilizer where a part of the original is broken and missing. The bird copy flew when he threw it. Knowing that the masters of ancient Egyptian technology made scale models of the projects they built (such as ships or temples), Dr. Messiha rejected

suggestions that it was simply a toy and spoke publicly on its being a model of airships which existed in Ancient Egypt.

RESEARCH AT THE SPHINX: THE HALL OF RECORDS

In 1987 the Organization of Egyptian Archeology (OEA) asked Dr. Messiha to study the Sphinx. Using classical Egyptian dowsing instruments in tandem with a radionic computer, Dr. Messiha began studies of the Sphinx, making a number of significant discoveries and validating his statement almost 20 years earlier that he would help to open the way to the Hall of Records although he himself would not enter it. Under one part of the Sphinx, he detected an underground network with two corridors, a staircase, and a room or cavity with a clear geometrical shape which contained an altar and a granite statue. He detected other statues below the paws of the Sphinx, as well as a sarcophagus under the body of the Sphinx.

Dr. Messiha was a long-time member of the American Society of Dowsters and published an article on his Giza Plateau studies entitled “Dowsing the Great Pyramid” in the Vol. 28, No. 2, 1988 edition of the *American Dowser Magazine*.

THE IMHOTEP SCIENTIFIC SOCIETY

Dr. Messiha co-founded the Imhotep Scientific Society in 1985. Egyptophiles will remember Imhotep as the most famous and revered of the ancient Egyptian masters, who designed, among other monuments, the Step Pyramid at Saqqara for the Third Dynasty Leader, King Zoser. The name Imhotep means “he who comes in peace”. He is so respected that he became worshipped after his death as a God of healing, and his chapel at Saqqara, called “Asklepieion” by the Greeks and related to the Master initiate of healing named Asklepius, becoming a hospital for the ill and crippled. The Greeks called him Imuthes. The Temples around Thebes have buildings dedicated to Imhotep. Egyptian scribes would pour a bit of water upon the ground before writing as an act of homage to him. The modern-day Imhotep Society promotes studies of the esoteric sciences including alternative medicine, sacred architecture, and Radiesthesia.

Among those joining Dr. Messiha in forming the Imhotep Society were Dr. Yehia Koshak from Saudi Arabia and Dr. Ibrahim Karim of Cairo. It is to Dr. Karim and his immeasurable current contributions that we will now turn.

Dr. Khalil Messiha died on December 29, 1998.

PART FOUR

DR. IBRAHIM KARIM AND BIOGEOMETRY

FOUNDATIONS

Ibrahim Karim was born to a family comfortable in the elite circles of Egypt; his father Dr. Sayed Karim was a renowned pioneer in modern architecture in the Middle East and author of numerous texts on Ancient Egypt. Ibrahim Karim demonstrated remarkable abilities in childhood, such as the capacity to quickly sketch artistic caricatures with a single unbroken line; his ability was such that his father had his caricatures turned into wrought iron sculptures to adorn clubs. This artistic sensitivity would later be an essential skill in the development of therapeutic BioSignatures.

TRAINING IN SCIENTIFIC RADIESTHESIA WITH DR. KHALIL MESSIHA

Dr. Karim earned his Doctorate in Architecture at the prestigious Federal Institute of Technology in Zurich, Switzerland. In 1969, he became an Architectural consultant to the Egyptian Minister of Health and the Minister of Culture. In 1972 he served as a visiting Professor of Architecture at Heiwan University in Cairo, and in time took over his father's prestigious ALEMARA Consultants architecture and design firm.

In connection to his position as Architecture consultant to the Egyptian Ministry of Health, in 1972, Dr. Karim was commissioned to upgrade the facilities at the Sakakini Museum of Ancient Egyptian Medicine. The Director of the museum was Dr. Fawzy Soliman Soweih, M.D., an expert in the ancient medical knowledge of the Egyptian High Culture and an associate of Dr. Khalil Messiha, whose radiesthesia work was discussed in the previous section. In addition to Dr. Soweih's informing the young Dr. Karim on deeper aspects of ancient Egyptian medical practices, Dr. Messiha initiated Dr. Karim into the French methods of Scientific Radiesthesia. Dr. Messiha gave Karim a gift of two special pendulums plated in silver and gold; one a Djed and the other a Wadj. Dr. Karim would later find that he could combine these two pendulums into one composite form and create a very powerful energy emitter, the knowledge of which was encoded in the Egyptian myths.

RECLAIMING THE FRENCH RESEARCH IN SCIENTIFIC RADIESTHESIA: BRINGING THE ARCHIVE BACK TO ITS ROOTS IN EGYPT

Dr. Karim took to the practice of Scientific Radiesthesia immediately and actively pursued further knowledge in the field. Knowing that the French pioneers of Scientific Radiesthesia were associated with an organization called the House of Radiesthesia (*Maison de la Radiesthésie*, which also published many research works) based in Paris, Dr. Karim decided to visit the *Maison* during his trip to Paris in 1973 on a government mission for the Egyptian Ministry of Health. His original plan had been to visit the *Maison* immediately upon arriving in Paris; upon arriving in Paris, however, the course of events resulted in his postponing the visit for several days. When finally he arrived at the *Maison*, an elderly woman came up to him and asked him where he had been and stated that she had been waiting for him for days. Quite a remarkable greeting, given that Dr. Karim had not notified anyone that he was coming.

Dr. Karim soon found that the woman in her eighties was Madame Lambert, now the administrator of the *Maison*, and that her husband had been its founder. When Dr. Karim informed her that he had come in search of information on Scientific Radiesthesia, she replied that there was little of that work going on anymore, and that virtually everyone worked in mental (psychic) dowsing instead. Madame Lambert noted that her husband had been a close associate of Chaumery, de Belizal, Turenne and a whole host of other pioneering researchers in Scientific Radiesthesia. The original work from the great scientific radiesthesists -- their original research instruments, their unpublished research notes, everything -- were still stored in the *Maison's* basement, gathering dust.

It was apparent in their exchange that she took a keen interest in Dr. Karim; she asked him where he came from, to which he replied that he was Egyptian. After further conversation she told Dr. Karim that she had been waiting for someone to arrive to carry this work forward, and that she now knew it was he. Upon making this astounding statement, she took Dr. Karim into the storage area and gave him as a gift all of the extensive archives of Scientific Radiesthesia which had been accumulating and languishing there. Although he offered to pay for this wealth of unpublished material and tools, she refused to accept payment. As Dr. Karim would later say, "It was a treasure one could not buy". Now, thirty years later, it is apparent that Madame Lambert made a wise choice indeed in entrusting the archive to Dr. Karim; he has put it to very good use in supporting the development of his science of BioGeometry.

The work of modern Scientific Radiesthesia, developed by the French pioneers who were inspired by and constantly referential to the high point of the art and science of Scientific Radiesthesia in Pharaonic Egypt, had come full circle; it now found fertile ground for its modern flowering in Egypt, the country of its birth.

For what follows, I would like to thank Dr. Karim. He has shared this information with the world and allowed me to introduce it to a larger audience. Please bear in mind that everything in this text are only highlights from a very deep body of work that has many topics and aspects that go well beyond what is covered herein. Those interested should pursue training in BioGeometry and the explorations in this area offered in the The VESICA INSTITUTE trainings.

DISCOVERING THE THREE PRIMARY COMPONENTS OF SPIRITUAL ENERGY FIELDS: THE “BG3”

We will now survey a few aspects of Dr. Karim’s work in Scientific Radiesthesia, and his creation of a comprehensive system of knowledge, practice, and tools in BioGeometry. First we will turn our attention to the discovery of two vital energy-qualities in the 12-fold spectrum identified by Dr. Karim, which in combination with -G become the 3 key energies of spirituality used in BioGeometry, the BG3.

THE HIGHER HARMONIC OF GOLD: THE SECRET OF SPIRITUAL ALCHEMY

Dr. Karim was aware from the work of Enel that -G was a prime energetic component of spirituality; he knew, however, that there must be others as well. In his research, he discovered that when a person prays, he emanates a strong Gold energy even when not wearing any physical gold. He realized that the artistic representations of Saints and spiritual masters with Golden halos around their heads or bodies were literal depictions encoding vital information about spiritual energy fields.

This Gold energy that is emanated from a person when in prayer or in other deep states of spiritual communion is energetically in resonance with

physical Gold, but it is a higher octave -- a “higher harmonic” -- of that energy. This Higher Harmonic of Gold (hereafter HHG) energy emanates from a high level of spiritual reality, a level of Divine Wisdom which orders and balances energies in the manifest world. It has the capacity to alchemically transmute toxic energies into beneficial energies; Dr. Karim has developed many practical BioGeometry techniques to use HHG for this purpose. BioGeometry demonstrates that the empirical basis of “creating gold” in classical alchemy is in fact the ability of the Alchemist to hold a spiritual resonance with the higher plane of Divine Wisdom; this resonance link exists through the forces of the heart. The classical alchemical transmutation of base metals (lead) into Gold is a kind of graduation exercise of a spiritual master, showing the linkage of the heart to the plane of Divine Wisdom.

Anyone can learn to effortlessly create energetic transmutations of toxic energies into beneficial energies using HHG through BioGeometry methods. There are particular geometries connected to HHG that can be used in design for energy balancing purposes. One key principle is that HHG is connected to the geometry of the point in the center of the circle, a classical geometric symbol of the Godhead. In reality, this is a circuit diagram to HHG, which manifests in the center of any circular or semi-circular movement. HHG also appears in the midpoint of linear energetic movements.

HHG can be detected by two methods. The first is simply to hold a pendulum in one hand (any pendulum will do, even a lead weight on the end of a string). Holding a piece of gold in the other hand, a resonance circuit forms between the pendulum and the piece of physical gold. This circuit is in resonance with the higher energy of HHG, so the pendulum will detect and show the intensity of any fields of HHG that are present.

The second method discovered by Dr. Karim is the use of the virtual cone pendulum. HHG can be detected by adjusting the moveable disk to rest on one of two different settings, either Indigo or Orange.

THE HIGHER HARMONIC OF ULTRAVIOLET: DISCOVERING THE “ATMOSPHERE OF THE ANGELS”

With -G and HHG identified, a third vital component of spiritual energy was identified. Dr. Karim found over time that this component was the Ultra-violet light described in many different spiritual traditions and texts. Similar to HHG, this was a higher octave or higher harmonic of the Ultra-violet light known to physics; it can be detected and measured with the virtual cone pendulum set to UV. BioGeometry regards this Higher Harmonic of Ultraviolet (HHUV) to be the “Atmosphere of the Angels”.

In the scale used by Dr. Karim a reading of 195 or higher is required for angelic contact. There is a BioSignature called “Angelic Connection” which is used for this purpose; this form itself creates a reading of over 195 with HHUV. HHUV can also be created along with horizontal -G and HHG together to form the BG3 in a variety of ways including: specific geometric angles, balancing precise points with color in the 360 degree perimeter of a space, specific numerical sequences, etc.

THE BG3: THREE ESSENTIAL COMPONENTS OF SPIRITUAL ENERGY FIELDS

Dr. Karim thus came to discover HHG and HHUV, developing simple and effective methods to detect, measure, and create these energies for beneficial purposes. These two energies together with horizontal -G (H-G) form the three primary energies of spirituality, the BG3. In BioGeometry it is critical to understand (as referenced earlier) that these energies, and all other energies in nature, do not simply operate according to a materialistic physics paradigm of energy emission and reception. Rather, the core concept is RESONANCE.

RESONANCE, NOT SIMPLY EMISSION OF ENERGY

When we pray, our personal field becomes filled with HHUV energy. Similarly, when we pray sincerely from the heart, resonance arises with the higher spiritual world of Divine Wisdom and through this resonance our field becomes filled with HHG energy. What we do with our activity, energy, emotions, and consciousness creates the resonance with the greater world that sustains or destroys us.

THE IMPORTANCE OF CLEARING FIELDS & RESPECTING RESONANCE

When we understand this profound reality of Resonance -- not as an abstract concept but as the true foundation of all life -- it becomes apparent that our practical work with energy and vibrational radiesthesia should be directed by this understanding. One aspect of this knowledge is to not devote excessive time to dowsing any kinds of toxic energy such as: illnesses, electromagnetic fields, toxic earth energy lines, etc. These situations should be dowsed only when absolutely necessary and for the minimum amount of time needed to establish their qualities. Following the dowsing, one must then do the transmutation work to turn these energies to HHG energy.

After we dowse any kind of toxic energy, we should immediately clear our fields. One Egyptian method is to make the sign of a cross at the forehead, energetically clearing information fields. That is only an intermediate clearing, however, and it should always be followed by running water over the hands and head, or preferably a full shower, at the earliest opportunity, in order to clear oneself more deeply. Moreover, one should learn to dowse his own energy fields and internal anatomy, checking himself out thoroughly in this manner every week to detect energetic imbalances and for correction before they can turn into physical illness. (This process is taught in BioGeometry training and in The VESICA INSTITUTE trainings, both of which include methods of balancing any imbalances found through specific forms; also, many dowsers around the world teach a variety of methods for dowsing one's own field.)

At this stage we recall the cautionary tale of Enel, who healed many people only to fall prey to their illnesses because he absorbed them. He passed on to his students at the end of his life the necessity to clear oneself every time after doing work with toxic vibrations. We also recall Chaumery, who built large emitters of vertical negative green (V-G) in his hemispherical arrays and thought he was safe if he avoided the direct line of emission; his ignorance of Resonance cost him his life as well. In BioGeometry and in the VESICA INSTITUTE work, we do not play with hemispherical emitters or any other toxic emitters, and we always make the appropriate corrections to emitted energies before working with them.

CLARIFYING THE TRUE NATURE OF NEGATIVE GREEN

Having quickly surveyed HHG and HHUV, and the importance of understanding Resonance, we can now take a look at Dr. Karim's work clarifying the true nature of -G. This is a vast topic but we will cover it through a quick summary of key points:

- -G is emanated on the opposite side of a sphere from the sun's position. This means that -G is that aspect of cosmic energy that can penetrate through matter. This ability of -G to penetrate all matter is connected to its being the spiritual carrier wave for information, energy, and consciousness.
- By cutting the sphere in half and making a hemisphere or dome, one can freeze the spectral energies of the sphere in place and make a fixed geometrical emitter. Strong -G will flow from the base of the dome in

both its horizontal and vertical forms unless geometrically corrected. The pyramid is geometrically equivalent to the dome. This explains why the pyramid was used in ancient times for spiritual initiation and why the dome is used in modern sacred architecture: both create strong concentrations of -G, the spiritual carrier wave essential for contact with spiritual forces. Remember that it is vital to correct the energy emission from these forms if they are to be used by living beings.

- De Belizal and Morel discovered that positive (visible) Green was an antidote to -G poisoning. It was later discovered that the horizontal wave of -G helped to lessen the intensity of the vertical wave of -G, given the polarized nature of these two waves. Dr. Karim has found that, in fact, the most potent method to protect against V-G is to add the components of spirituality to these; in BioGeometry the BG3 can be used in conjunction with +G to counteract detrimental V-G.
- As stated previously, one should avoid spending much time dowsing toxic energies. This includes particular types of relics, such as Egyptian mummies. Mummies are saturated with V-G to preserve the body; the Egyptian high culture well understood how to use geometric emitters to saturate the tissues of the corpse and create a mummy. This is one aspect of the “Curse of the Pharaohs” which claimed the lives of early Egyptologists, such as those connected to the King Tutankhamen dig; strong concentrations of V-G were present in the tombs. It is also suspected that poisons were inserted in certain positions on the mummy, in the varnish or especially at the point of the wrist-crossing, so that the poison wave could ride on the carrier -G wave. Another aspect of the Curse of the Pharaohs is that specific Egyptian magic (actually a highly advanced spiritual science) was used to create Guardians of the Tombs using the “Ka” of the deceased, a topic too complex to enter here.

On one occasion an American lady dowser went to Egypt to dowse the tombs and mummies; Dr. Karim warned her against this and advised her Egyptian guide not to go along on the excursion. The guide ignored the advice, leading to his becoming extremely ill and in a near-coma for three days as a result. His recovery required intensive treatment by Dr. Karim to counteract severe V-G poisoning; this counteraction can be done with the BG3 in conjunction with +G, as discussed in the BioGeometry Trainings.

- V-G is a very strong mummifying energy; it dehydrates and preserves tissue. H-G has a very slight mummification effect but is much more of a balancer than a mummifier.
- -G is created anywhere there is friction. One example of this phenomenon can be friction in the interface between two substances. For example, at the seashore, where water and land meet, H-G is abundant. No doubt this points to the reason people feel great and invigorated at the seashore. Another interface is at the horizon where the sea meets the sky line, and is one reason our attention is drawn there when we are at the beach. Another example is friction between two materials on a 2-dimensional surface, such as designs made on a piece of paper. This little-known fact is the secret behind -G emissions in drawings and designs, and of amulets, as well as spiritual art.
- Where grid lines cross there is a vortex created which is full of -G.
- Every energy center of the human body and energy center in nature is full of -G. H-G is essential for life, and, indeed, all of the BG3 are essential for life.
- A -G carrier wave can be created by the quality of the number seven and when seven items or particular objects are present.
- Because -G contains the spiritual carrier wave band, any concentration of it can be a spiritual gateway, or a portal between the worlds. This is a key to healing, spiritual work, sacred architecture, and so on. When this is understood in light of the preceding aspects of -G concentration, many esoteric phenomena are explained. This is a deep topic pursued in both BioGeometry and The VESICA INSTITUTE trainings.

CREATING WITH THE BG3: SECRETS OF BIOGEOMETRICAL DESIGN

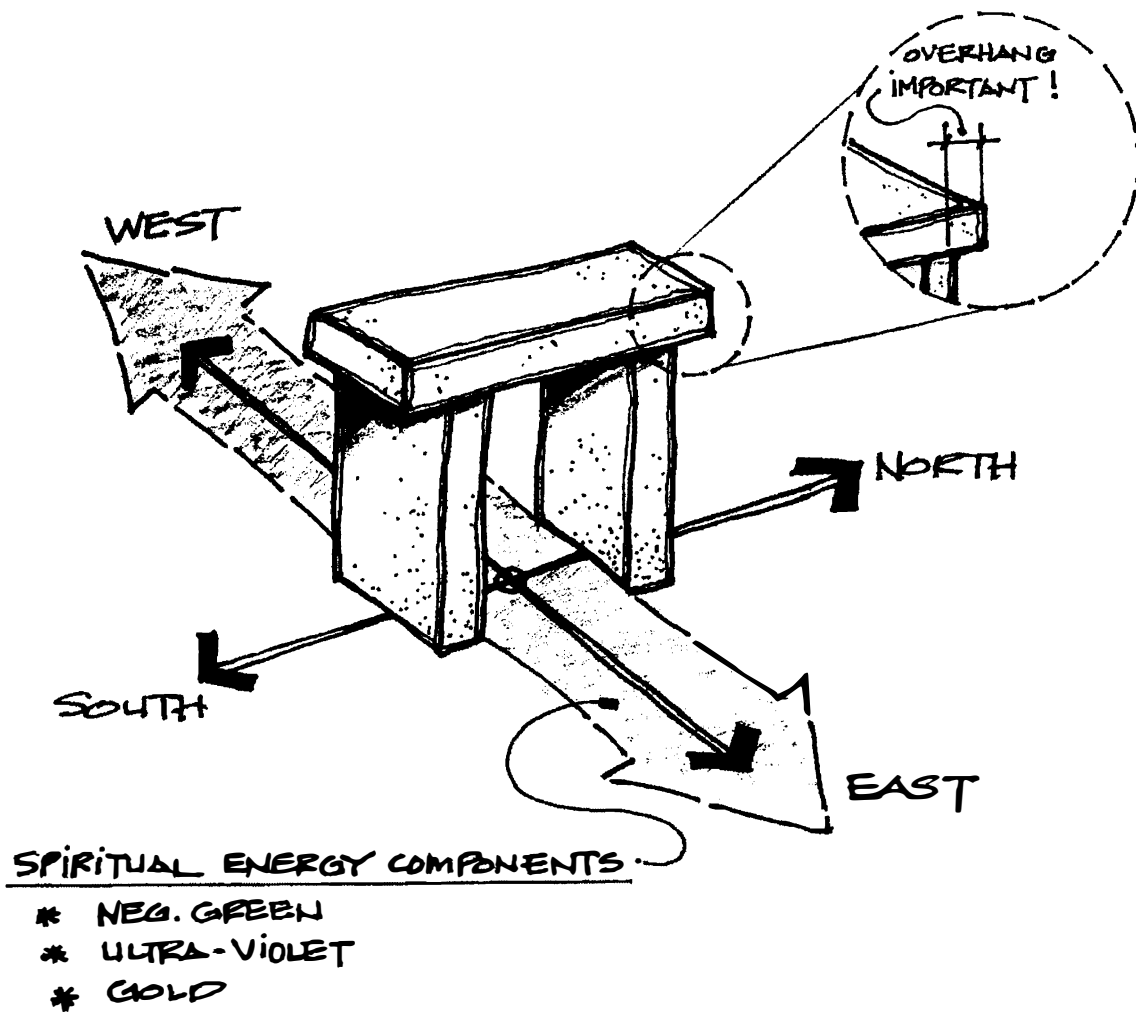

One of the core concepts of the VESICA INSTITUTE training in Sacred Geometry is the existence of a spiritual blueprint of creation that structures all life and matter. In the ancient Egyptian, Greek, and Holy Grail Traditions the primary term for this spiritual matrix of sacred geometry was *The Net*.

ALIGNMENT TO THE GEOMETRIC MATRIX

In BioGeometry, there are numerous practical techniques for aligning to this background geometric matrix. In BioGeometrical human energy balancing training, one finds that the direction one faces will profoundly affect the human energy field (a finding of other bodies of work as well, such as Fran Nixon's Vivaxis work). This principle can be extended into radiesthesia techniques for balancing the human and other energy fields both on site and remotely.

PERIMETER RESONANCE POSITION AND THE BG3

A key principle to observe in designing living spaces is that any and all objects will have a specific place in the overall grid of a room that promotes their contribution to the creation of an emanation of the BG3 into the general space of the room. When objects are in their Perimeter Resonance Position (PRP) in a space, the BG3 in that space is optimized. Of course, it is not always realistic to place objects in their PRP; for aesthetic or practical reasons they may need to be placed elsewhere. There are other ways to create the BG3 emanation into the space, such as placing specific colors on precise locations on the walls. These colors can be very small and should be placed in complementary color pairs. Despite the small size of the colors used, the emanation of the BG3 in the space is quite intense when they are placed correctly. This technique is called "Color Balancing".

Generating the BG3 in environmental spaces has classically been done by using a Gateway form. Optimal results are obtained when the lintel (upper bar) of the gate extends past the two sidebars. Proper alignment of this gateway form, usually East - West, causes an emanation of the BG3 through the gateway. The BG3 energies can then be conducted to other areas through providing a linear path, such as a stone walkway, to conduct the energy.

DIRECT MEASUREMENT OF ENERGY, NOT FIXED PLACEMENT GUIDELINES

Please note that when we talk about placement, this requires the use of a Virtual Cone pendulum, or a piece of Gold with a regular pendulum, to determine by direct measuring of BG3 emanation the correct placement of objects or colors. This is not done according to a rigid scheme, as in the way Feng Shui tends to be practiced in the West today, with fixed geographical locations for colors and shapes. The key to BioGeometry work to create these energies is always direct measurement and confirmation of real energies being created by placement, not abstract guidelines for placement.

CENTRAL RESONANCE POSITION AND THE BG3

A related concept to the PRP is the Central Resonance Position (CRP). Whereas the PRP creates an emanation of the BG3 throughout a space, the CRP creates the BG3 only immediately around the object itself. The CRP brings an object into resonance with the BG3 through rotating it on its central axis until the direction where it emanates the BG3 is located. Since the CRP only affects the object itself with the BG3, it is primarily useful for living things that can use the beneficial energy.

Particularly the CRP is excellent for plants. Rotating a house plant on its axis to find its optimal alignment, or rotating plants being put into the ground to find their best alignment before filling in the hole are examples of this useful practice.

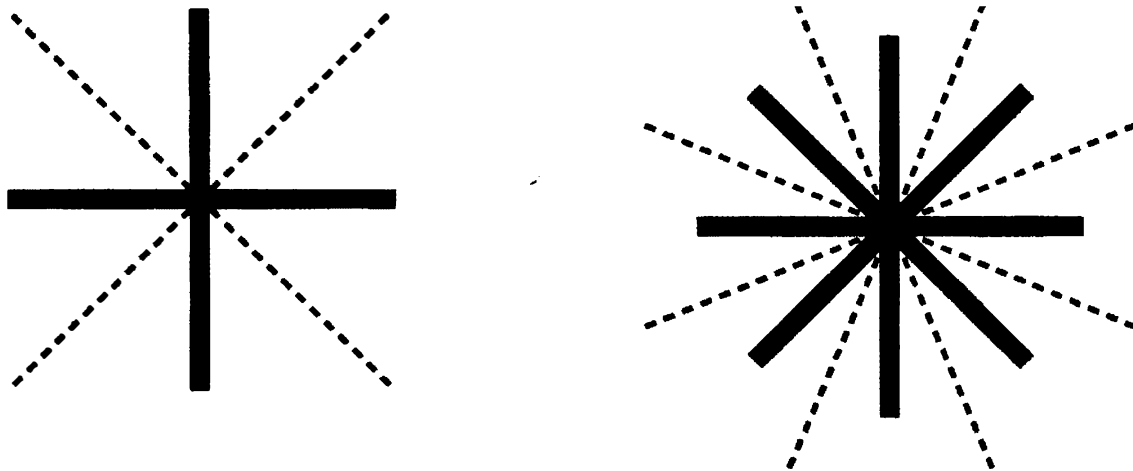

The CRP is also useful for people; the direction a person faces can affect energetic balance in different internal systems. It also has applications in building; in the Sacred Architecture of the past it was understood that blocks of stone cut from the earth had a particular alignment that should be maintained when they are used in a building.

CREATING HIGHER HARMONIC OF GOLD THROUGH ROTATION

Every time a circular movement is made, the implied center of this circle will light up with Higher Harmonic of Gold. This is true of even partial circular movements; HHG will light up in the center of the virtual circle that would be made if the movement were to be completed. Once this is understood, many different ways to create an emanation of HHG through circular movement or design become apparent.

It is vital that the center of the circle be left open, with no material object nor any physical marking at the center of the design. Any physical thing in the center of the movement will drastically reduce the amount of HHG created.

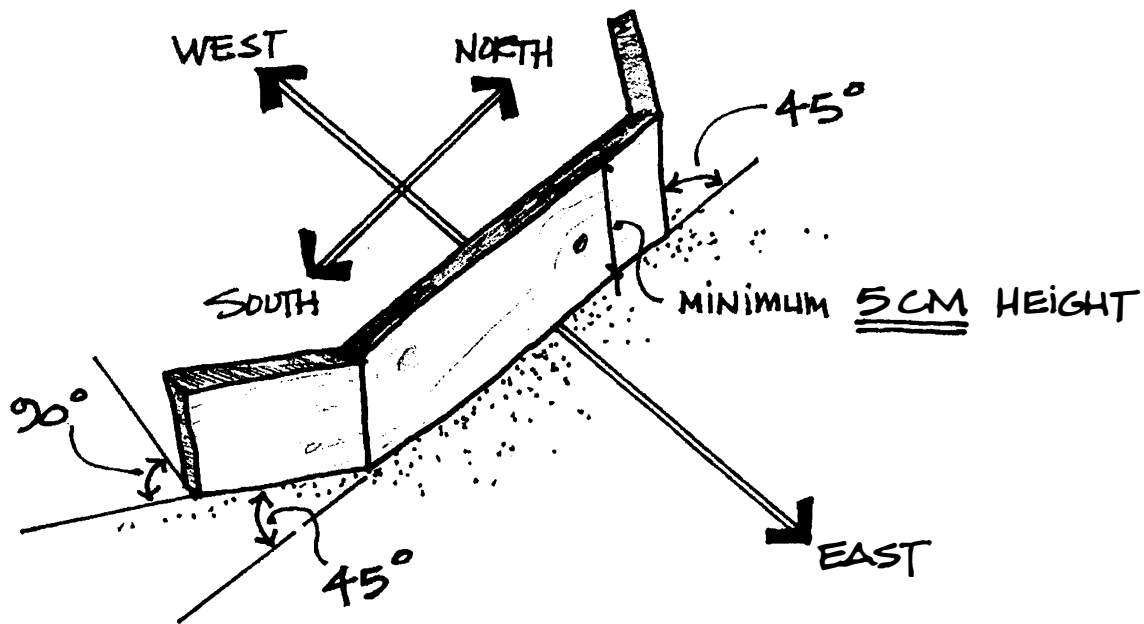

Another important principle for HHG emanation is that it appears in the center of movement or structure. Just as it will appear as an emanation point in the center of a circle, it will also appear as a line of Gold energy in the center of other movements of energy. For example, in a cross form (two lines crossing at 90-degree angles) the HHG will appear as a line of Gold energy in the center of other movements of energy. For example, in a cross form (two lines crossing at 90-degree angles) the HHG will appear as a line of Gold energy centered between these lines, at 45-degree angles. If one were to draw in physical lines at these 45-degree angles, the HHG will shift to new centers of the lines (22.5 degrees).

There are many practical techniques to create rotation effects and create HHG emanations, even in static forms such as architecture. For example, a square building will have virtual rotation created if square posts are correctly placed on the outer corners of the building. An Octagram (8-pointed star) design will create virtual rotation since it contains a rotated grid of one square upon another square, at 45 degrees to each other.

THE 45 DEGREE EMITTER PRINCIPLE

There are other BioGeometry applications of 45-degree designs that create the BG3. It is thought that this may be because our physical world is based on 3 dimensions of 90-degree axis rotations. The 45 degrees is then in the center of the 90-degree dimensional structure, tapping the principle described above regarding HHG emanating into the center of physical patterns. One way this principle can be used to advantage is to position trim with a 45-degree isosceles triangle cross-section in a particular location on the wall around a room. Another application is made of a board with two shorter boards coming off its ends at 45-degree angles. This form can be used to create BG3 emanations in enclosures or in gardens and landscape forms.

There are numerous other practical techniques in BioGeometry design work, including: Interface, Shifting, Transparency, and the proper use of BioGeometrical Shapes. These topics are covered in the relevant BioGeometry trainings.

DISCOVERING BIOSIGNATURES: THE GEOMETRIC PATTERNS OF LIFE ENERGY

One of the most important advances in Dr. Karim's work has been the discovery of many hundreds of linear geometric patterns known as BioSignatures. These patterns have the effect of balancing human energy fields, both in general and in specific internal systems.

PERIPHERAL AND CENTRAL HUMAN ENERGY SYSTEMS

A core idea in BioGeometry is that the human body has both peripheral and central energy systems. The peripheral energy system creates the energetic boundary around the body; it includes the fat layers of the body that have the capacity to store information (including -G). The peripheral energy system exchanges information with the outside world. Via acupuncture points and energy pathways it communicates this information to the central energy system. From this perspective, the acupuncture channels and points serve to connect the internal energy of the body with the environment, receiving information about the environment so that the core energies can adapt to changing conditions. Accordingly, every internal organ gives part of its energy into the peripheral system so that it can receive information. The peripheral energy system is comprised of multiple levels, including vitality, emotional, and mental levels.

THE PRINCIPLE OF GEOMETRIC RESONANCE

A key to working creatively with the body's natural peripheral and central energy systems is to remember the principle of Resonance; one aspect of this is that geometric forms which are similar to one another can enter into vibrational resonance. This geometric resonance principle has been an important part of the knowledge and practice of many different advanced spiritual initiation traditions around the world. It is rarely made public. Geometric resonance accounts for many of the most powerful inner practices and so-called "magic" of these traditions, which range from the Greek Christian Hermetic tradition to the Himalayan schools of initiation.

ENERGY FLOW PATTERNS IN THE HUMAN ORGAN SYSTEM

Dr. Karim realized that the human body has multiple movements of vital energy through all of its internal systems. Every organ of the body has lines of energy flow creating a set pattern of energy movement. These patterns are archetypal for human health, and the same pattern is beneficial for all healthy organs in all people. Each energy flow pattern is related to a specific energy function that manifests as the biological activity of that organ. An organ with nine functions will thus have nine different archetypal geometric patterns of energy movement within the structure of the organ itself. If any of these geometric energy movement patterns becomes distorted for any reason, this will disable the function related to that pattern within the organ itself and -- by extension -- in the body as a whole. Dr. Karim describes seeing these different energy flow patterns in the same organ as wires of different colors tracing out three-dimensional geometric movements within the overall shape of the organ and interacting only at specific connecting points. The composite form of all the colored wires of energy movement in the organ then gives the geometric energy matrix of the organ as a whole.

Dr. Karim discovered that the three-dimensional energy movement patterns that create the functions of the organs can be represented as a two-dimensional flat image, which encodes holographically the information of the three-dimensional pattern. These two-dimensional images, when placed in the human energy field, will go into resonance with the same geometric energy movement in the internal organ. In other words, placing the 2-d pattern on the surface of the body allows it to interact with the body's peripheral energy system, which then communicates it to the body's central energy system and to the organ itself. The pattern, through the previously described principle of geometric resonance, will support -- and if necessary, correct -- the healthy movement pattern it encodes within the specific internal organ. Since human wellness is dependent on these energy patterns having the correct geometry within the organs for the correct multiple functions to all operate optimally, this discovery has opened a vast new world.

Dr. Karim has worked for decades to identify each of these specific energy flow patterns in each human organ and other systems through a very exacting process of radiesthesic analysis of human organs. At this point, he has identified well over 700 different key energy patterns essential to human wellness.

Now that we have outlined the basis of BioSignatures, we can survey a few further points.

A COMPREHENSIVE APPROACH TO BIOSIGNATURES

To balance an energy problem, often it is not enough to simply provide the BioSignatures related to the specific organ affected. There may be a need to balance additional related energy systems. For instance, an injury such as tennis elbow may not only require BioSignatures for the muscles and the elbow, it may need colon BioSignatures since, as Chinese medicine makes clear, the colon meridian passes through the elbow. The lung meridian on the inside of the arm is related to the colon meridian in Chinese medicine, so a particular lung BioSignature may be required as well. As a general principle, many problems will require Stomach BioSignatures to balance the energy even if the problem is not apparently stomach-related; this is because so many energy meridians pass through the stomach. The principle to follow here is: always directly test with Radiesthesia to make sure of what is needed and that all required BioSignatures have been provided to balance the energy of the system. Never assume that only a certain BioSignature related to the site of discomfort is needed.

An excellent example of the need to test thoroughly and not rely on assumptions as to what is needed comes from the Hepatitis C trials at the Pharmaceutical Department of Al Azhar University in Egypt. It was logically apparent that the BioSignatures for the Liver and for Immunity would be needed, since Hepatitis C settles in the Liver and impairs the immune system. When tested, however, it was found that these two were insufficient, and it was discovered that a particular BioSignature related to the Heart was needed for optimum effectiveness.

TESTING FOR BIOSIGNATURES

A particular experimental radiesthesia protocol is used to evaluate a person's energy system, involving using anatomy charts and a witness of the person being evaluated. This method is derived from radiesthesia practices developed by the Scientific Radiesthesists in Europe in the last century. Particular movements of the pendulum indicate the level of balance or imbalance in any energetic system; any system of the physical or energetic body can be evaluated, at any level of scale, DNA, cellular, organ, meridian, functional system, energetic field layer, etc. More details can be found in the companion volume to this text.

CATEGORIES OF BIOSIGNATURES

We can distinguish between several different categories of linear diagrams used to balance energy in BioGeometry. While this discussion is largely based on Dr. Karim's own descriptions, I have added a few extra categories for conceptual clarity.

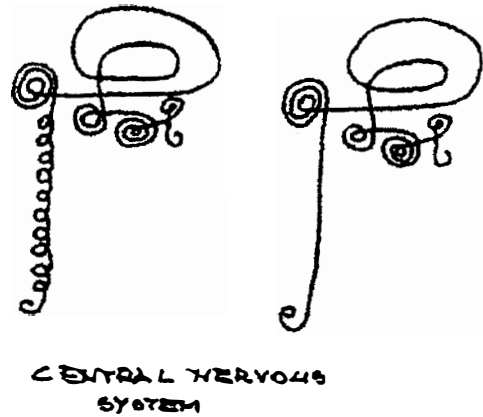

1. Organ BioSignatures (described above) and BioNumerals: BioNumerals are BioSignatures that are variations on a core pattern. They contain different numbers of internal movements, which fine tune the vibratory resonance of key patterns for the needs of particular individuals. For instance, a particular pattern related to the spine can be modified with different BioNumeral variations to fine-tune the vibration needed by the individual.
2. Energy system and qualities BioSignatures: experimental BioSignatures exist for Immunity, General Balance, Relaxation, etc.
3. Spiritual BioSignatures: These are patterns resonant with specific spiritual realities such as Angelic Connection, Psychic Protection, etc. The most advanced of these are the Divine Names BioSignatures which Dr. Karim states are the most difficult to dowse of any he has ever discovered. He has created a series of spiritual BioSignatures related to the 99 names of the Divine in the Islamic/Sufi tradition. Dr. Karim discovered these through working with Sufi masters chanting the divine names. A metal stand with 14 of these forms, simply called the "Divine Names Desk Stand", is imported from Egypt and available from The VESICA INSTITUTE. These are exceptionally powerful and profound patterns.
4. Experimental Energetic-Conditions-Balancing BioSignatures: Experimental forms exist and are being evaluated for balancing energetic states which may be involved with diabetes, cancer, depression, epilepsy, and so on. A wealth of anecdotal evidence has accumulated in Egypt over the last decade regarding the use of these patterns. Again, we stress that these forms are experimental and no medical claims are made regarding them.
5. Personal Diagrams: These are not considered BioSignatures per se, as they are not derived from careful Radiesthesia protocols and exacting research but rather through the direct clairvoyant/intuitive faculties of the Radiesthesist. A Personal Diagram is a linear geometric pattern that will balance all systems for a particular person at a particular moment in time in a particular location. It will not work for another person nor at another time or place, but it is perfect for the intended individual at the moment of creation. The ability to intuit these patterns is a spiritual gift more evident

in some people than in others; for many people, however, working over time with BioSignatures makes this faculty stronger.

EXAMPLES OF BIOSIGNATURES

Below are a number of examples of experimental BioSignatures.

CREATING THE BIOGEOMETRY MEDALLION

Dr. Karim's work with Scientific Radiesthesia allowed him to evaluate a person's energy fields at any level, and to identify areas requiring balancing. The development of BioSignatures allowed him to directly apply the patterns needed to balance any problems found. As public awareness of these advances grew, the demands on his time for personal evaluations and energy balancing services increased. In addition to applying the patterns to a person energetically through Radiesthesia, Dr. Karim would engrave the most needed patterns on a bracelet or other item to be worn close to the body so that the energy flow pattern would be continuously available in the energetic field. His humanitarian nature made it nearly impossible for him to turn away those in need, but as a professional architect with a thriving business, his time for such work was extremely limited.

Persons who benefited from his work began to ask if he could do something with this method to benefit poor persons living in villages with no doctors or health care. Letters began to arrive from other countries asking for help; one from Bosnia told of the terrible problem there with radio-active contamination from missiles (probably referring to depleted uranium munitions) which would continue to poison their land for the next generation or longer, asking what could be done to protect the people there and their children. Dr. Karim realized he didn't have the time to engrave rings with patterns for so many people and began to look for ways to get the BioSignatures out on a larger scale.

The answer came from a friend active in computer technology. The BioSignatures could be reduced in size on a computer, so that hundreds of them could be put into a small space. They could then be printed onto metal in a way similar to integrated circuits on a computer chip. This BioGeometry chip idea was taken to a company that produced computer circuits on anodized aluminum chips, leading to their using lasers to engrave hundreds of BioSignatures on an aluminum chip. The next generation of development allowed the BioSignatures to be embossed in three-dimensional relief, making their effect even stronger. This led to the genesis of what is today the most popular and effective BioGeometry resource for the layperson, the BioGeometry medallion. Dr. Karim has continued to advance the technology, and many different models have been produced. All BioGeometry medallions have strong fields of the BG3 in addition to specific BioSignatures including Organ BioSignatures, BioNumerals, and Spiritual BioSignatures.

© 2002 Dr. Ibrahim Karim

In these photos you can see the early evolution of the BioGeometry Chip medallion. The first aluminum chip is represented on the upper left, and a squared-off successor, upper right. Below are both sides of a later circular design. The medallion is like a computer chip, but instead of using electricity, which has both horizontal and vertical wave components, a much safer subtle energy featuring only horizontal components from the body itself flows through the BioSignatures on the medallion. This activates them and makes them available energetically. Any linear pattern placed within the human energy field initiates this process.

CLEARING THE MEDALLIONS OF IMPREGNATION

It was found that some people would at first experience tremendous positive benefit from wearing the medallion. Then the benefit would suddenly stop and the medallion would be ineffective. Dr. Karim discovered that any metal worn on the body can become impregnated with electrostatic charge and toxic energies rendering it inactive until cleared. Fortunately, clearing can be done by simply knocking the edge of the medallion on a hard surface and blowing forcefully on it once a day.

Dr. Karim has now made available a clearing plate that will clear the medallion or any other worn items, including eyeglasses, of impregnation when they are placed on the plate. It has been found to be especially effective in removing some of the more difficult forms of toxic impregnation, such as that resulting from negative emotional energy fields.

DETOX EFFECTS FROM THE MEDALLION

Most individuals feel immediate effects from wearing the medallion, but effects take different forms given the unique state of each person's energy field. For those with blocked energy there can be detoxifying effects for a brief period as toxins in stagnant areas are moved out of the energy field. These detox effects can manifest not simply energetically and physically, but also emotionally, mentally, and spiritually. The medallion works on many different levels simultaneously to balance energetic fields.

MEDALLIONS ARE NOT TO BE SHARED

Because a person's energy impregnates into the medallion (or any other BioSignature item worn, in fact, all worn items of any kind), Dr. Karim is adamant that they not be shared between people. When one has worn a medallion, that person should be the sole wearer of that item from that time forward.

BIOSIGNATURES CAN BE APPLIED MANY WAYS

In addition to wearing a medallion or other piece of jewelry with BioSignatures, there are many other methods for getting the energetic effects into one's energy field. These include drawing them on the skin and projecting them mentally.

EVALUATIONS OF BIOGEOMETRY: RESEARCH PROJECTS AND PRELIMINARY FINDINGS

EGYPTIAN NATIONAL RESEARCH CENTRE COMMITTEE ON THE INFLUENCE OF GEOMETRICAL SHAPES ON LIFE FUNCTIONS

By the early 1990's, a number of prominent Egyptians, including government officials, were quietly coming to Dr. Karim for help with a variety of problems. One day an Egyptian government official arrived complaining that his doctors had been unable to help his high blood pressure problem. The official stated that if Karim could help him, then he would see that Karim's work was scientifically investigated. After a quick energetic adjustment and a near instantaneous improvement in the official's condition, he lived up to his word and arranged for Karim to meet a group of scientists and have BioGeometry evaluated. Despite the ridicule and dismissal the group obviously felt toward any possible impact of geometric forms on biological functions, Karim repeatedly demonstrated that he could indeed affect living systems through geometric emitters.

The first major experiment involved two cultures of bacteria; over one of these Karim put particular geometric forms that would paralyze their biological functions. The scientists wanted Karim to kill the organisms but Karim refused, insisting that BioGeometry was to be used for life and not for killing. A second culture was left alone as a control. Hours later, the control culture, as expected, showed a large increase in the number of bacteria. The culture with the geometric emitters over it was unchanged in bacterial count, as Karim had predicted. These results demonstrated the effect of the energies emitted by the particular geometries he had chosen. Following this and other successful tests, Dr. Karim was made the Chairman of a "Research Committee on the Influence of Geometrical Shapes on Life Functions" at the Egyptian National Research Centre in Cairo.

THE REUTERS REPORT ON BIOGEOMETRY

Over the years an increasing number of health professionals, both medical doctors and mental health specialists, reported positive results with Karim's methods and tools. At the same time, medical authorities such as Chairman of the Doctor's Syndicate, Dr. Hamdi El-Sayed, attacked Karim publicly for daring to offer new approaches for wellness and health without his being a Medical Doctor. Karim always insisted that he was not attempting to be a doctor, but instead was running a research center, finding the correct patterns to balance specific energetic conditions. Karim went so far as to putting a sign outside his house saying "This is not a clinic" to ensure this was understood. However, his growing reputation led to increasing numbers of people seeking him out for help.

Reuters News Service published a report on Dr. Karim's work in 1999, featuring the story of Hisham Fattouh, a 24-year old engineering student from Ain Shams University. Hisham had awoken one day with blood covering his face; doctors diagnosed the problem as a low platelet count. A number of attempted medical interventions, ranging from chemotherapy to the complete removal of his spleen in a U.S. hospital, had no positive benefit. The Reuters article quotes Hisham as saying, "When I met Ibrahim, he put a ring on my finger with a design print on it, then he gave me a medallion. At first I thought it was strange, but after all I'd been through, I was prepared to give it a go." Hisham reported that his platelet count went up overnight to 35,000, reaching a remarkable level of 250,000 within four days. Hisham's case was also discussed in an article in Al-Ahram Weekly.

THE HEPATITIS C TRIALS AT AL AZHAR UNIVERSITY

In Egypt, as in many other countries around the world, Hepatitis C is virtually epidemic. The problem became so widespread by the mid-1990's that the Egyptian government sponsored a Hepatitis C research project headed by Dr. Taha Khalifa, Dean of the Pharmaceutical faculty at Al Azhar University in Cairo. The project was designed to evaluate a wide range of potential conventional and alternative treatments for Hepatitis C including: various North American and European pharmaceuticals, herbal medicines, etc.

Dr. Karim was invited to take part in the Hepatitis C project. In reality, the invitation to Dr. Karim to participate was partially motivated by the desire of some Egyptian scientists and doctors to discredit Dr. Karim; they felt that there was no way that Dr. Karim's work could be validated when rigorously studied at Al Azhar University. They fully expected that the research project would show BioGeometry to be ineffective, and they could declare once and

for all that Dr. Karim's ideas about the power of shapes and patterns were no more than folk superstitions. These detractors were destined for a shock.

Dr. Karim made clear several things at the outset of the study. First, he was not a medical doctor and he made no medical claims; he would participate simply on the basis of experimental research into the possible effects of shapes on life functions. Second, he did not want to meet any of the patients in the group that would be given the BioGeometry resources for Hepatitis C. Dr. Karim was aware that if BioGeometry proved to be successful, his opponents would claim that he had influenced, perhaps hypnotized, the patients into getting better. He would simply provide the resources needed to the University staff and they in turn would give them to the individuals in the BioGeometry group.

Dr. Karim knew that BioGeometry is a universal energy science; it can be used to benefit virtually any energy condition. Dr. Karim had already developed hundreds of BioSignatures -- 2-dimensional shapes which show the precise patterns made when vital energy moves through the human body. Each movement pattern creates a specific energy function in the body and, through giving a person the pattern of energy movement which would restore the correct function in the body, the BioSignatures appeared to have profound beneficial affects.

For the specific challenge of Hepatitis C, he tested multiple persons with Hepatitis C and found the energy imbalances they all shared. Dr. Karim then tested for which BioSignatures would balance the problems. He found that the full range of Liver BioSignatures helped to balance the energy, which was to be expected since Hepatitis C is anchored in the Liver; however, they were not sufficient. He then found that another BioSignature, one related to the Heart, was required to render treatment most effective. The needed Liver and Heart patterns, plus the pattern for Immunity, were included on a BioGeometry medallion that the subjects wore for six months. During this time, the patients in this group were to receive no conventional form of treatment. Dr. Karim simply gave the medallions to the project to use and waited to hear the results.

After 6 months, Project head Taha Khalifa M.D. announced on Egyptian National Television that the project found that the most positive results by far (average 90% normalization of enzyme levels, many patients with complete viral clearance) were enjoyed by the group given the BioGeometry medallion to wear. He not only noted that BioGeometry had been the most successful approach evaluated in his study, but that it was far ahead of the second best approach. This next best option only averaged around 20-30% improvement

(with toxic side effects) compared to BioGeometry's non-toxic 90% average improvement.

This revelation had an electric effect on those who saw the broadcast. Dr. Karim suddenly became a celebrity, with people coming to his house and pursuing him on the street requesting aid for all kinds of conditions. Many medical doctors told Dr. Karim that this trial would be conclusive for him, and that his BioGeometry work would now have to be officially acknowledged. Dr. Karim is, however, under no illusions regarding entrenched attitudes in the medical and scientific establishment about these matters, and later commented, "Every time I get a good success is when the trouble starts". Dr. Karim still stresses that he is not a medical doctor, that his work is an adjunct to mainstream medicine and not a replacement, and that his BioGeometry center is a research facility and not a clinic.

His fame now established in Egypt and much of the Middle East, the BioGeometry Medallion became a highly demanded item. Appearing on talk shows, Dr. Karim would find that celebrities and government officials appearing with him on the shows were wearing his medallions. During the festival of Ramadan he was given his own television show, the title of which translates, "God Grant Me More Wisdom". The show, in which he taught simple methods to work with vital energies and improve one's wellbeing, was a tremendous success and has gone into multiple seasons. Reruns are regularly broadcast via Satellite in the Middle East.

Evaluation of the practical results of his approaches with BioSignatures and other BioGeometry methods using the BG3, have continued in diverse fields and in various countries. For instance, Dr. Karim reported during an interview for a television program in California that a pilot project at a cancer institute in Egypt suggested that particular BioGeometrical shapes increased the lowered level of white blood cells and platelets, raising the possibility that specific BioGeometrical shapes may aid the wellness of persons undergoing chemotherapy*.

BIOGEOMETRY AGRICULTURAL PROJECT ON THE RED SEA: IRRIGATION WITH SALT WATER

Agriculture on the Red Sea suffers from a lack of fresh water to irrigate the land. Unfortunately, desalinization plants for the production of fresh water

* No medical claims (or claims of any kind) are made -- nor should they be inferred -- in this report. This text is simply noting historical events and statements made by Dr. Karim and the officials involved in these evaluation projects. All reports in this text are for information purposes only and all results discussed should be considered experimental at this time.

are prohibitively expensive for most seaside agricultural applications. In May 1998, Adel Ammar conducted a two-month experiment to see if it would be possible to use salt water exposed to the BG3 to irrigate crops. The project brought in salt water from the Red Sea, channeled it through a BioGeometrically designed water path, and then stored it in a BioGeometrically designed container. The water path and container created strong emissions of the BG3 simply by their geometric design.

Three groups of Sweet Potatoes were used in this experiment. Group One was irrigated with fresh water, the second group with untreated salt water straight from the Red Sea, and the third group used salt water which had run through the BioGeometrically designed channel and stored in the BG designed container. About one month later the groups were compared. The Sweet Potatoes grown in ordinary salt water were tiny and shriveled, as would be expected. The potatoes grown in fresh water appeared to be normal. But, incredibly, the sweet potatoes grown in the BG treated salt water grew quite obviously faster, healthier, and larger than the ones grown in fresh water! This project suggests that the energies of the BG3 are primary and the physical substance secondary, since the salt water treated with the BG3 was actually more supportive to the growing plant than fresh water.

CHICKEN FARM PILOT PROJECT IN EGYPT

This project was conducted by Dr. Ahmad Hussein and Mahmoud Nasr of the Egyptian Ministry of Agriculture. The project was to determine whether BioGeometry techniques to create the BG3 could be used to replace artificial hormones, antibiotics, and other additives in the raising of chickens.

The primary method used was color balancing, done around the building housing the chicks, on the outside wall of the building, and on the inside walls of the building. The results showed healthier chickens that gained weight faster and consumed less food than normally expected. One specific finding was that the average weight of the chicks in the BioGeometry experiment was 1600 gr. after only 37 days. Compare this to the average weight of normal chicks at 1500 gr. after 45 days.

BIOGEOMETRY AGRICULTURAL RESEARCH IN HOLLAND

Dr. Karim has worked in cooperation with Prof. Peter Mols of Eindhoven University in Holland, on a research project applying BioGeometrical techniques to create the BG3 in an apple orchard. Techniques used include the 45

degree horizontal emitter technique and color balancing the field with complementary colors placed in the correct locations on stakes around the field. The project demonstrated that healthy growth and freedom from pests could be achieved without the use of pesticides.

ARCHITECTURE APPLICATIONS

Given that Dr. Karim is a professional architect, it is not surprising that innumerable architectural projects have been designed incorporating BioGeometry. Radically new designs were featured in a 1994 project, Old Vic Resort in Hurghada on the Red Sea (two views below), and the Portrait Resort in Sokhna on the Red Sea - Gulf of Suez, built in 1990. Dr. Karim has trained a group of architects over the years in Cairo, and he gives a large block of BioGeometry training specifically for architecture and other design work; a rich subject we have barely touched on in this book. Dr. Karim is currently involved in a number of major architectural projects in Europe and the Middle East in addition to his ongoing teaching and research in BioGeometry.

© Dr. Ibrahim Karim 2002

One of the first designers to learn BioGeometry and apply it in professional projects in the U.S. has been Michael Keith of the Michael Keith Design Group in New York City. Keith and his partner Ronald Skrepich met Dr. Karim in Cairo in the mid-1990's and have trained with him since that time. The May/June 2001 issue of the major American interior design magazine Veranda featured an article entitled "Calm: BioGeometry" which showed the beautiful design work Keith had done in an upscale Manhattan apartment using BioGeometry. The writer of the article spoke forthrightly of the esoteric aspects of BioGeometry and noted the palpable energetic effect of its use in the design: "...I did notice a change in Ian, the friend I had brought with me. A New Yorker who complains about the rudeness of other New Yorkers, he

shouts at taxi drivers, has little patience with people who move slowly and, unknown to him, often seems agitated. In the Kusters' apartment he seemed remarkably calm. He even whispered.” The Michael Keith Design Group has a website at www.michaelkeithdesign.com and can also be reached at (212) 219-3789 for interior design consultation.

MONTESSORI SCHOOL PROJECT

In Maadi, Egypt, an affluent suburb of Cairo, color balancing was applied to the Montessori school to see if it would have a beneficial effect on the students. Teachers reported that hyperactive children calmed down after the color balancing, an effect also reported by the children's parents, who noticed the change. Students became capable of deeper concentration and receptivity to the material being taught, as well as tapping into more of their creativity when doing projects.

EXPERIMENTAL PRACTICAL APPLICATIONS OF BIOGEOMETRICAL DESIGN

In an article written by Rawya Karim in June 2000, she noted that using a few simple means, a wide variety of products could be improved in terms of their efficiency, safety, and/or the stress they produce in humans using them. The first method would be to redesign the essential geometric shape of the product, changing it to one that creates the BG3. Secondly, BioSignatures or other BG designs can be embedded in the product. A third method is to add a label or other external design to the finished product. Ms. Karim then gave numerous examples of industrial applications of BioGeometry that have been tested and found beneficial. (Please note all applications are to be considered experimental at this time.)

- **TRANSPORTATION VEHICLES AND HEAVY MACHINERY:** Specially designed steering wheels and seats to improve comfort, alertness, and reduce fatigue. BioSignatures can be added to support specific bodily organs that are stressed in using such machinery.
- **MOBILE PHONES:** This is one of the most tested applications, aimed at reducing the heating of brain tissue and supporting the human energy field against the toxic emissions.

- **FURNITURE DESIGN:** To create strong fields of the BG3 and to protect from detrimental energies in the environment, there have been interesting designs developed both by Dutch students of BioGeometry and by American designer Michael Keith; the latter has developed beautiful models of a BioGeometrical Table and BioGeometrical Altar.
- **COMPUTERS:** Designs to reduce the stress caused by the electromagnetic emissions, or to help relieve eyestrain and muscular strain from prolonged usage.
- **PHARMACEUTICAL DRUGS AND MEDICINES:** BG has been used to experimentally reduce toxic side effects.
- **PLATES, CUPS, GLASSES, BOTTLES, AND CUTLERY:** Designs to charge the food or drink, and potentially help in cases of food intolerance and allergies.
- **CIGARETTES:** BioGeometrical designs on the box or on the cigarette paper can be used. In Egypt smokers put their cigarettes on a BioGeometrical tray to charge them with the BG3 before smoking. (Please note that this method will help, but will not eliminate the toxic effects of cigarette smoke; BioGeometrical enhancements are not excuses for continuing self-destructive behaviors and cannot remove the inherent dangers of these practices).
- **PLANTS/POTS:** To enhance growth, protect from disease, and prolong display life.
- **COSMETICS:** The correct designs of the container can charge the cosmetics with the BG3 so that they enhance the wellness of those who wear them.
- **GENERAL DESIGN:** BioGeometrical principles can be applied to virtually anything, limited only by our imagination and our understanding of the core principles involved. Watches, Pens, Clothes, Key Chains, the list is endless.

INFRA-RED TESTING OF THE BIOGEOMETRY RESOURCES

The effects of various BioGeometry devices on the human energy field have been evaluated in Egypt by testing the Infra-emanation from the center of the

forehead, just above the middle of the eyebrows. This testing indicated that the BioGeometry devices do have measurable effects on the human energy field. The initial control temperature was 35.8 degrees C. Some results of the testing:

ORIGINAL L DESIGN PENDANT: When the test subject wore the original design of the L the temperature dropped to 34.4 °C. The L creates a field of Higher Harmonic of Gold.

BIOSIGNATURE MEDALLION: When wearing an early version of the BioSignature Medallion with the first side up, the temperature dropped to 34.2 °C; with the second side facing up, the temperature dropped to 33.7 °C. The medallion creates an energy field of the BG3 in addition to the effect of the specific BioSignatures imprinted on it.

IKUP (EBONY PENDULUM): Wearing the Ibrahim Karim Universal Pendulum reduced the temperature to 34.4 °C. The IKUP emits the BG3 from its tip in addition to the resonance effects of the geometries of the spiritual planes incorporated into its design.

COLOR BALANCING: Reduced the temperature to 34.0 °C. Color Balancing creates a field of the BG3 in the space.

COMBINED ORIGINAL L PENDANT AND ORIGINAL BIOSIGNATURE MEDALLION: Reduced the temperature to 33.5° C.

These results showed reductions in the IR emanation of from 1.4 °C to 2.3 °C. These results from in-house testing await independent testing and replication of these measurable effects.

Note that these results were obtained with an earlier generation of the L pendant and the BioSignature Medallion. The latest generations of these two items appear to have stronger emissions of beneficial energy according to Radiesthesia testing, and so may have even greater reductions than those measured in this earlier study.

One reason why this reduction in IR is desirable is that there is a specific sub-band of IR which is linked to detrimental energies, similar to the detrimental effects of the vertical wave of -G.

TWO FINAL POINTS

- BioGeometry methods are an experimental adjunct and support to, not a replacement for, medical treatment. Again, no claims are made or inferred regarding BioGeometry. Never use BioGeometry in the place of appropriate medical treatment but rather explore how it can potentially be used to support wellness.
- BioGeometry clarifies and integrates spirituality into practical methods of balancing energy and aiding personal growth. It is not a substitute for prayer and fundamental spiritual practices, but rather supports and extends these into numerous practical areas.

APPENDIX I

MEDIA REPORTS ON BIOGEOMETRY

The following are direct quotes about BioGeometry and the work of Dr. Ibrahim Karim taken from a variety of media sources. These quotes give a glimpse of the remarkable potential and practical effects of BioGeometry. *Please note that the statements in these quotes are simply extracts from media reports, and are not claims of any kind made by THE VESICA INSTITUTE or BioGeometry Energy Systems Ltd.*

“What BioGeometry does is take you into an invisible realm to interact with energy on all different levels, including the mental and psychological.”

Quote from Dr. Ibrahim Karim, from the article “Healthy Signs” in ***Egypt Today***, October 2000.

“Hesham Fattouh, a 24-year old engineering student with a low platelet count, had some reservations about the healing power of shapes. But having undergone a \$25,000 course of treatment in the United States and having had his spleen removed to no avail, he decided to try Karim’s method [BioGeometry]. ‘When I met Ibrahim he put a ring on my finger with a design print on it, then he gave me a medallion. At first I thought it was strange, but after all I’d been through I was prepared to give it a go,’ he said. Overnight his platelet count went up to 35,000, and in four more days it soared to 250,000, he said.”

From the article “Geometric Medicine: Egyptian Architect sees Power in Patterns” appearing on **ABCNEWS.com** and also carried by **CNN.com**.

“Hassan Hafez Amin, 57, a retired marketing consultant with gout, says Karim’s methods had worked where others had failed. ‘I went to Ibrahim with an open mind and he gave me a medallion inscribed with a geometric pattern to wear. In one month my uric acid levels decreased from 9 to 4.8,’ he said.”

From the article “Healing the Sick with Geometric Designs”, distributed worldwide by **Reuters New Service**.

“Dean of Al Azhar University’s faculty of Pharmacy, Taha Khalifa, invited Karim to take part in a National Research Project aimed at testing the available medication for Hepatitis C. Karim created a special aluminum laser-engraved chip was used by 300 patients over a period of three months. The results were astounding, with the normalization of the liver enzymes of 90 percent of the users in contrast with the usual success range of 20 to 25 percent. “

From the article “Healthy Signs” in ***Egypt Today***, October 2000. Dr. Khalifa also announced the successful results with BioGeometry on an Egyptian television program broadcast by satellite throughout the Mediterranean. The television show

also featured a parade of patients in the BioGeometry control group of the study, speaking about their experiences and in some cases producing medical records showing that their blood now tested clean of Hepatitis. That program and other television coverage elevated Dr. Karim to celebrity status in Egypt.

“Here’s what you need to know: People who live or work in environments using BioGeometry report more positive energy accompanied by a feeling of serenity... I did notice a change in Ian, the friend I brought with me [to report on the BioGeometrically balanced Interior Design of an apartment.] A New Yorker who complains about other New Yorkers, he shouts at taxi drivers, has little patience with people who move slowly and, unknown to him, often seems agitated. In [this] apartment he was remarkably calm. He even whispered.”

From the article “Calm: BioGeometry” by Charles L. Ross, appearing in the prominent Interior Design journal **Veranda** May/ June 2001.

“Clients requesting a soothing, healing and loving home have recently turned to BioGeometry, the Egyptian science of shapes and energy. Specially designed decorative elements (borders, frames, and symbols) are integrated into the design to radiate a positive energy flow. BioGeometry does not require the use of designated elements or specific placement of items in the space and therefore does not hinder the designer’s creativity or style. Thus, the clients experience positive feelings on the physical, emotional, and spiritual levels.”

Michael Keith, founder of the interior design firm Michael Keith Design Group, Ltd, quoted in the **New York Home Book: A Comprehensive Hands-On Design Sourcebook for Building, Remodeling, Decorating, Furnishing and Landscaping a Luxury Home in New York City.**

*“BioGeometrical shapes, developed by Dr. Ibrahim Karim, claimed to have the property of producing a type of penetrating carrier-wave that can affect the enhancement or cessation of growth of certain microorganisms among other applications. In a preliminary experiment carried out in my laboratory on August 5, 1993, quite a noticeable cessation of growth of *Saccharomyces cerevisiae* was observed during the initial 3 hour growth of the organism... Further experimentation on this type of interaction between the Bio-Geometrical shapes and a variety of microorganisms is a top priority... To me the essence of this type of interaction seems to surpass explanation through our traditional and classical knowledge in basic science.”*

From the Scientific Report “Observations on the Interaction of Bio-Geometrical Shapes and the Growth of Microorganisms” from the **National Research Centre of Egypt**; it was authored by Prof. Dr. Badr-El Din, the Head of the Department of Microbial Chemistry.

“Being one of the 100 persons who recently attended the first BioGeometry seminar held by Dr. Ibrahim Karim... I felt overwhelmed by a vortex of information on what the science of the future will be like... Forget all you have learned on the finity of time and space and start a new journey in the way science will evolve for the new millenium.”

From the article “The First BioGeometry Seminar” appearing in **Heliopolis Magazine**, Summer 2001.

“The success of an agricultural project he undertook with Professor Peter Mols of the University of Eindhoven in Holland refutes claims that the healing effect of the use of BioGeometry is psychosomatic. Using color placement (colored sticks positioned at specific coordinates) instead of traditional pesticides, he was able to protect the plants from harmful bacteria and parasites, resulting in cheaper organic planting and the minimization of the negative effect caused by pesticides on the consumer. In another color placement experiment carried out at the Montessori school in Maadi, teachers observed a transformation in the behavior of hyperactive students who became calmer, more receptive and creative.”

From the article “Healthy Signs” in **Egypt Today**, October 2000.

“Ibrahim Karim... has been experimenting with the effect of certain two- and three-dimensional shapes that interact with surrounding energy fields to produce special effects on the biological system...[One] experiment involved planting sweet potatoes on a small plot of land by the Red Sea, using salt water for irrigation. The plant shriveled, as was to be expected. Another batch was irrigated with the same water, but placed in specially shaped [in BioGeometry patterns] containers. ‘We also shaped the irrigation canal, and the sweet potatoes grew this time.’... ‘I’m not saying that we can go and dig a canal from the Mediterranean or the Red Sea in the middle of the desert and start planting straight away. This will require a lot of research,’ Ibrahim cautions. ‘My job is to carry out an experiment with BioGeometrical shapes, demonstrate a fact, repeat this experiment until it becomes a scientific phenomenon, and allow specialists in every field to start research work.’”

From the article “A Whole New Angle” appearing in **Al-Ahram Weekly**, 2-8 September 1999

"Thinking out of the box: Only those who see the invisible can do the impossible," reads the plaque on Dr. Ibrahim Karim's desk. With a DSC in architecture from the prestigious Federal Institute of Technology in Switzerland, Karim is a pioneer of the science of BioGeometry. In the early 1990's Karim founded the BioGeometrical Systems Institute Company in Maadi and is now actively beginning to apply the fruits of 25 years of research on the interactive effect of architectural design and geometrical shapes on the earth's energy field and by extension, biological systems. Consultant to the Minister of Scientific Research, where he was the head of a Research Group in BioGeometry, to which he holds the patents, as well as the owner of the Alemara Consultants architecture firm, his innovative worldview may well be the science of the millennium."

From the article "Healthy Signs" in ***Egypt Today***, October 2000.

"OCTOBER magazine this week claimed that [Dr. Karim] was contacted by three Dutch cities which sought to make use of his geometric forms. The magazine also said that a group of physicians and surgeons had conducted experiments on the alleged affects of these shapes on patients suffering from allergic reactions, hepatitis, drug addiction, mental disorders and spinal illness. Doctors are also said to be investigating the influence of these shapes on smokers struggling to kick the habit. [Dr. Karim] confirmed that experiments investigating the effects of these forms on the growth of plants irrigated by salty water reported dazzling success."

From the article "Professor claims Geometric Forms maintain healthy equilibrium" appearing in ***The Egyptian Gazette***, Friday December 10, 1999.

"Dr. Karim pointed out that scientists in Holland had discovered that cracks beneath buildings caused by underground water would weaken the immune system of inhabitants living above them and make them easy prey to diseases. 'The Dutch scientists discovered that these cracks produce harmful fields of energy,' he noted. 'They (the scientists) placed notices at these places warning people to stay away,' he resumed. He said that a University in Holland had sought his assistance after its management noted that the students and staff members were abnormally lazy and had no wish to carry out their responsibilities. He said: 'After making thorough experiments, the scientists discovered that the University was built on an area notorious for underground water-made cracks. They contact me to provide them with my geometric forms to maintain energy equilibrium in the place.'"

From the article "Professor claims Geometric Forms maintain healthy equilibrium" appearing in ***The Egyptian Gazette***, Friday December 10, 1999.

APPENDIX II

SUMMARY OF KEY INFORMATION ON THE 12-FOLD ENERGY-QUALITY SPECTRUM AND THE THREE PRIMARY ENERGY-QUALITIES (BG3)

THE TWELVE-FOLD ENERGY-QUALITY SPECTRUM

- The 12 energy-qualities are related not only to visible and invisible colors, but also to other qualitative scales (sound, etc.)
- The primary tool to detect and measure the 12 energies is the Virtual Cone pendulum, the safest and easiest device for this purpose.
- The Universal Pendulum can also be used to detect and measure the 12 qualities; it can also emanate them, and so should be approached with caution because it has the capacity to emanate toxic energies.
- The circle is the fundamental 2-dimensional form in Sacred Geometry. The location of the 12 energies on the circle is determined by the magnetic fields of the Earth and the location of the North and South Poles. Visible Green can be detected toward the north pole and Negative Green toward the south pole. Because of this a simple drawn circle can be used as a compass anywhere on Earth to determine directions, if one has a Virtual Cone pendulum to detect the energy locations on the circle.
- The sphere is the fundamental 3-dimensional form in Sacred Geometry. The location of the 12 energies on the surface of any sphere is determined by the location of the Sun with respect to the sphere. Directly beneath the Sun's location, you will find the visible Green energy; on the opposite side of the sphere, you will find the Negative Green (-G) energy.

THE THREE ESSENTIAL ENERGY-QUALITIES FROM THE TWELVE-FOLD SPECTRUM USED IN EGYPTIAN BIOGEOMETRY (BG3)

- The three most important energy-qualities (BG3) in the 12-fold spectrum are Negative Green, HHUV, detected in the UV band of the Virtual Cone pendulum, and HHG, detected on either Orange or Indigo on the VC.
- The BG3 are present throughout natural energy systems, including the human body.
- The BG3 can be created through particular geometric forms, numerical patterns, sound, motion, and color placement.
- The BG3 are critical to balancing the human energy field for fundamental wellness.

NEGATIVE GREEN

Almost certainly known to the ancients. Rediscovered in 1934 by French researchers Chaumery and de Belizal.

- Chaumery and de Belizal felt that Negative Green was the most powerful wave vibration in the Universe, with the shortest wavelength. They found that it could pass through thick lead shielding which was sufficient to stop X-rays. They also believed it was related to the cosmic rays studied by astrophysicists.
- The Negative Green band contains the spiritual carrier wave; its ability to penetrate all matter allows it to carry energy, information, and consciousness from any spiritual or physical location to any other spiritual or physical location. This spiritual carrier wave is also associated with the number 7.
- Negative Green is generally beneficial in its horizontal waveform (detected on the Virtual Cone with the disk at -G, lip up) and detrimental in its Vertical waveform (detected on the Virtual Cone with the disk on -G, lip down).
- -G appears on the bottom of a circle oriented top toward the North Pole of the Earth. On a sphere, it appears on the reverse (dark) side of the sphere opposite the Sun's location.

- On a sphere, the location of -G is determined by the sun, a moving object. To fix the position of the Negative Green emission geometrically, simply cut a sphere in half. Negative Green will emanate out of the center of the flat base of the hemisphere or dome. This fixed emission of -G, characteristic of the hemisphere, can be used for many purposes, including domes in sacred architecture to create a strong spiritual carrier wave to connect the congregation in a temple to spiritual forces.
- A Pyramid form (four triangular sides meeting at an apex, with a square base) is energetically identical to a hemisphere or dome. Accordingly, the pyramid is a geometric emitter of -G energy, a vital key to its role in spiritual initiation and anchoring the Earth grid in ancient times.
- Domes and pyramids emit both the toxic (vertical waveform) and beneficial (horizontal waveform) aspects of -G. It is essential to cancel or transmute the toxic/vertical component of -G whenever living beings are to be exposed to the energy of these geometric emitters. This was well-known to the ancients, but is rarely understood or done correctly today.
- -G is created wherever two different surfaces interact, either in 2-dimensions (flat surfaces, designs) or in 3-dimensions. This includes at crossings, such as crossings of underground water; vortices are also formed at crossings and crossroads. Where friction is produced by the interaction of two materials, like a stream of water creating friction against the bank, -G is strong on both sides of the bank and HHG is in the center of the river.
- Crossings and crossroads also create an energy vortex, making an energy gateway between the physical and spiritual worlds. This is the source of folk tradition regarding the presence of ghosts and witches at crossroads.

HIGHER HARMONIC OF GOLD

- This energy is an emanation of the Divine world; it is an energy of tremendously deep Wisdom. It is the Gold light depicted in religious iconography around the heads of Saints or in the energy fields of high masters.
- This energy is in resonance with physical metallic Gold: this is the reason why Gold has always been considered so important in spiritual traditions. Physical Gold is a link to this energy, which is literally a higher octave or “Higher Harmonic” of physical Gold.
- The significance of Gold in Alchemy is linked to contact with this divine energy. HHG has the capacity to transmute toxic energies to beneficial energies and lower elements to higher elements.
- This energy can be detected with a Virtual Cone pendulum set to either Indigo or Orange, or alternatively with any pendulum and a piece of Gold. Dr. Ibrahim Karim, whose BioGeometry research is the foundation of work with HHG, developed both these methods.
- HHG is created whenever a person prays or engages in other spiritual work.
- HHG lights up in the center of any circle, sphere, or any semi-circular movement made in a design or by a living being. This is the secret held by the Initiation symbol of the “Point in the Center of the Circle” that represented the Sun God Ra in the Egyptian mysteries, the Godhead in Rosicrucianism, and the Sun in Western astrology.
- Research suggests that HHG energy-quality has a strongly vitalizing effect on the human immune system.

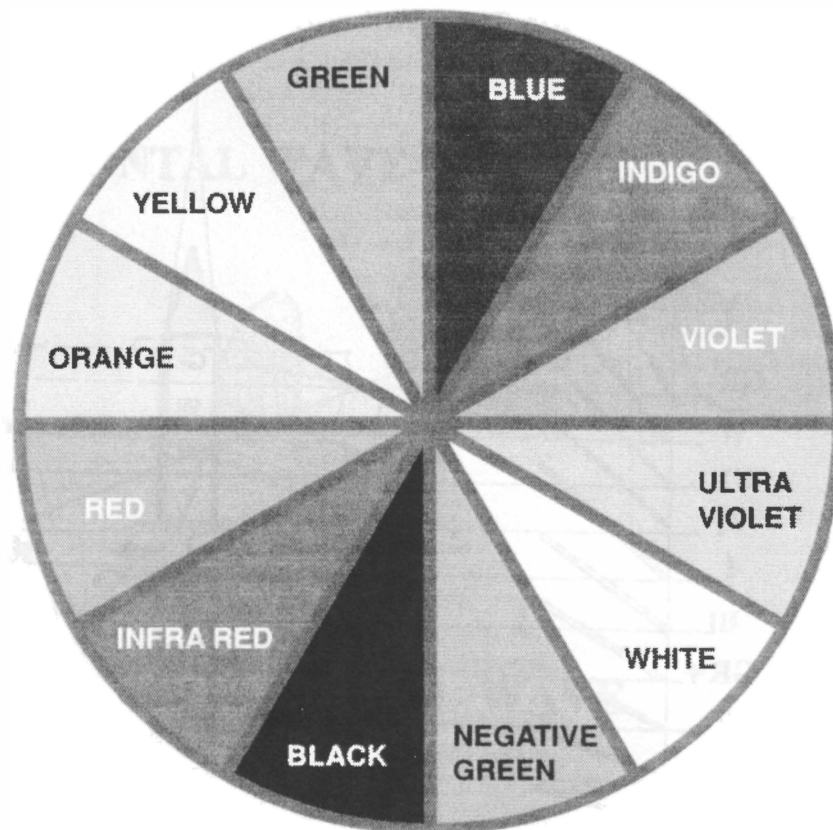

HIGHER HARMONIC OF ULTRA-VIOLET

- This is a profound spiritual energy known to many great spiritual traditions, and called the “Atmosphere of the Angels” in Egyptian BioGeometry.
- The modern understanding of this energy in Radiesthesia comes once again from Dr. Ibrahim Karim. He found that a particular strength of this energy in one’s own energy field was essential for Angelic contact. A particular BioSignature in the Egyptian BioGeometry system, the “Angelic Connection”, creates this level of HHUV.
- Research suggests that the HHUV energy-quality has a deeply relaxing and revitalizing effect on the human immune system.

APPENDIX III

The Virtual Cone Pendulum: The Key Tool to Detect and Measure The 12-Fold Energy-Quality Spectrum

The Virtual Cone Pendulum is the primary instrument used to detect the 12-fold energy spectrum and the 3 primary spiritual energies used in BioGeometry (BG3). The background of this tool and the 12-fold spectrum is discussed earlier in this text.

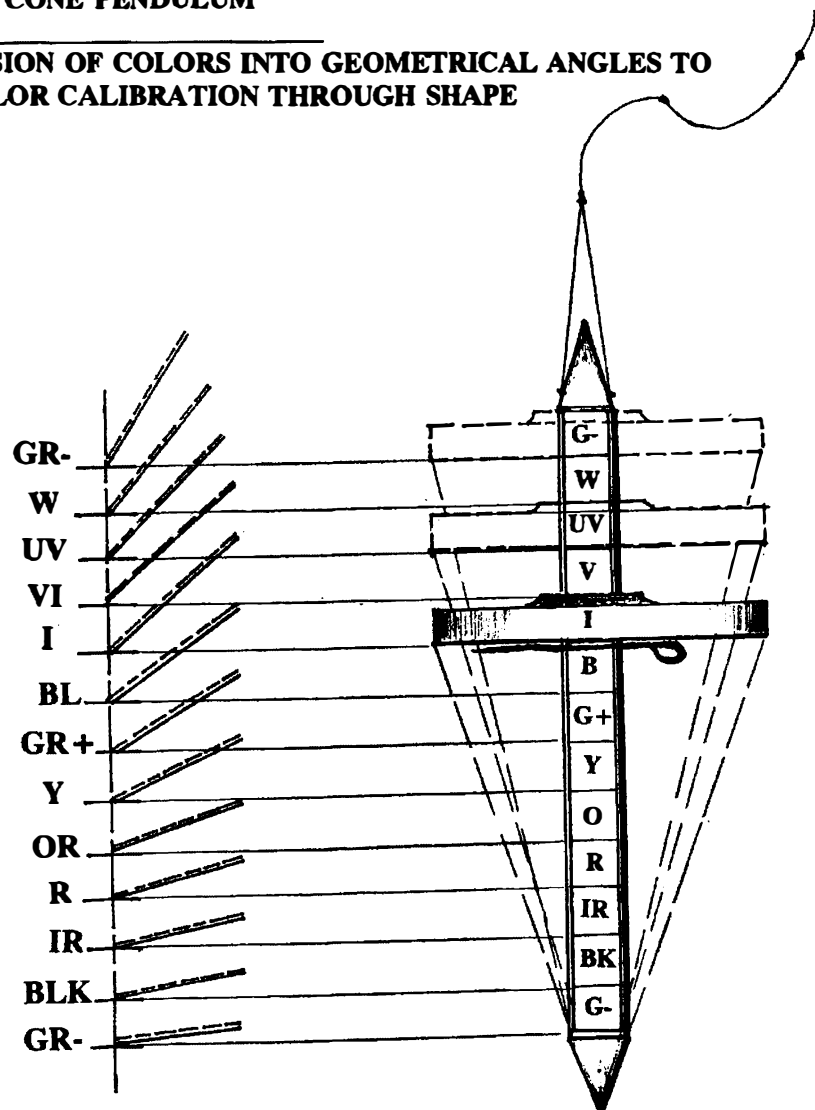

BASIC PRINCIPLES OF THE VIRTUAL CONE PENDULUM

The Virtual Cone Pendulum operates on the principle that specific geometric angles relate to specific qualities of energy. In deeper Sacred Geometry work, spiritual qualities are translated into specific geometric measures and relationships. In mainstream physics, there are specific refraction angles related to the separation of white light into the colors of the visible spectrum; similarly for the Egyptian-European energy work there are specific geometric angles that tap into each one of the 12 energy-qualities of the spiritual vibration spectrum. The Virtual Cone Pendulum is designed for easy selection of the precise angle needed to detect a given spiritual vibration.

VIRTUAL CONE PENDULUM

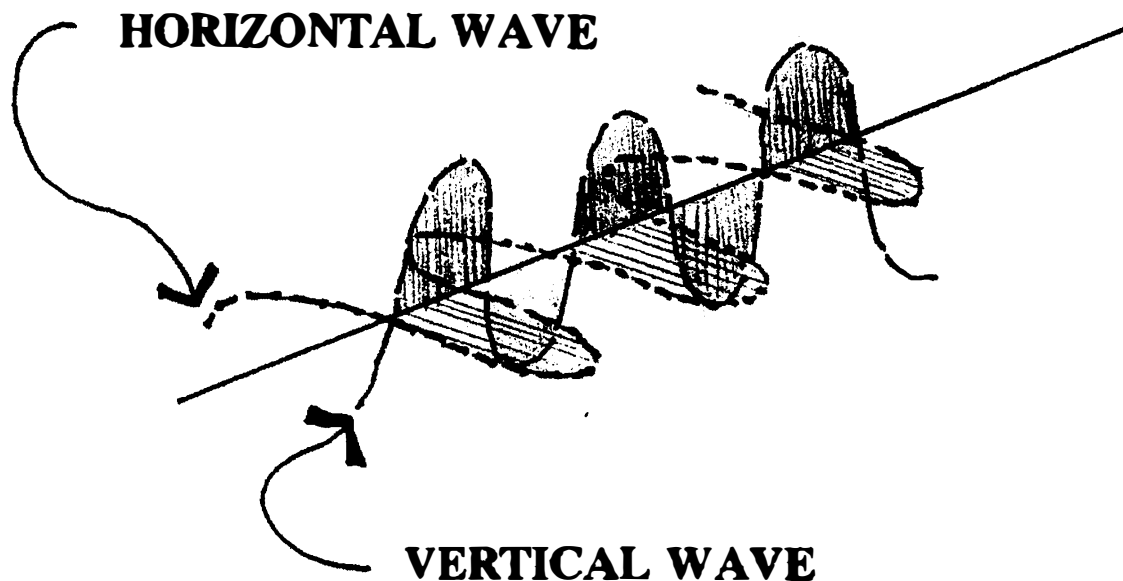

**CONVERSION OF COLORS INTO GEOMETRICAL ANGLES TO
GIVE COLOR CALIBRATION THROUGH SHAPE**

THE TWO DIFFERENT DIRECTIONAL WAVES

Each of the 12 energies has two different directional waves, which can be selectively detected with the Virtual Cone Pendulum:

1. **HORIZONTAL WAVE:** This is the beneficial waveform; it is a natural component of healthy biological systems. The original French discoverers of this wave, Chaumery and de Belizal, termed it the “magnetic” wave.
2. **VERTICAL WAVE:** This waveform is generally detrimental. Perhaps the most detrimental vertical wave is that of the -G range, which should be transmuted in and around human living spaces. Chaumery and de Belizal termed the vertical wave the “electric” wave.

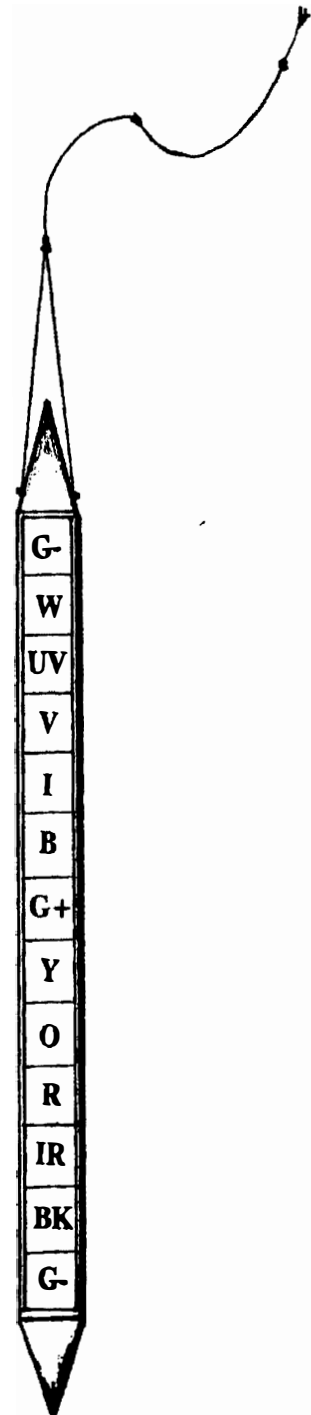

STRUCTURAL COMPONENTS OF THE VIRTUAL CONE PENDULUM

The Virtual Cone Pendulum (hereafter VC) has two structural components:

1. ROD: The Rod converts the circular spectrum of 12 qualities into a straight line. Negative Green (-G) is at the base and the top of the Rod. From top to bottom the following abbreviations stand for the 7 visible and 5 invisible colors of the full twelve-fold energy spectrum:

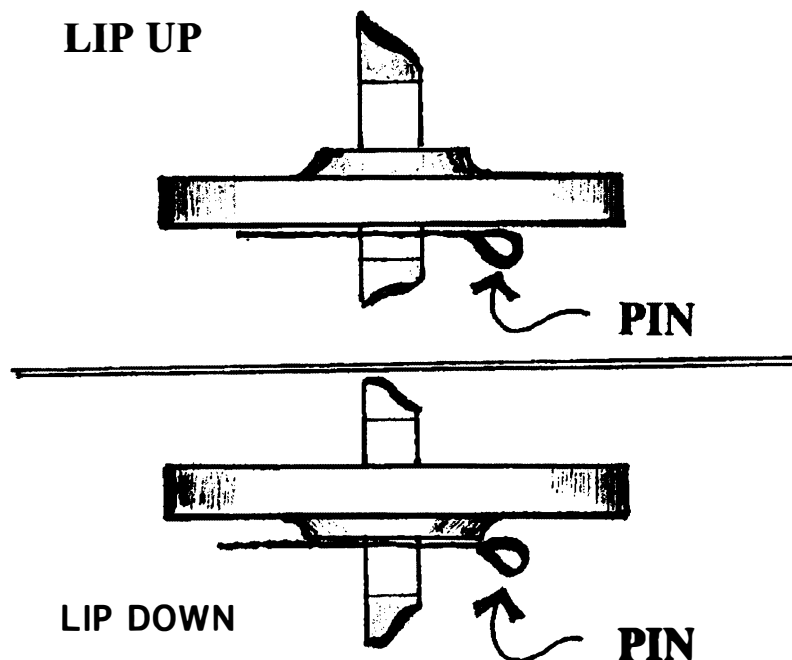

G-: Negative Green
W: White
UV: Ultra-violet
V: Violet
I: Indigo
B: Blue
G+: Green (resonant w/visible color Green)
Y: Yellow
O: Orange
R: Red
IR: Infra-red
B or Bk: Black
G-: Negative Green

2. **DISK:** The Disk slides up and down the rod to rest over a specific color level; this setting determines the energy frequency to which the VC is attuned. For example, placing the disk over “R” tunes the pendulum to detect the Red frequency; over “G-“ it detects Negative Green.

The disk has two sides to it: one side is flat and the other has a small lip projecting out close to the open center of the disk. It is vital to have the disk correctly oriented with respect to this lip for accurate readings.

- When the disk is set with the LIP UP it detects beneficial HORIZONTAL waves;
- When the disk is set with the LIP DOWN it detects detrimental VERTICAL waves.

ORIENTATION OF THE DISK LIP OF THE VIRTUAL CONE PENDULUM

This pendulum is called the “Virtual Cone” (original French term: *Cône Fictif*) because there is a literal “virtual cone” formed energetically between the lower point of the pendulum and the bottom edge of the disk at any specific

setting. It is the angle of this cone that determines the energy frequency detected.

The aforementioned lip on the disk ties into the virtual cone principle in that having the lip up or down will slightly change the angle of the virtual cone. The crucial difference between tapping into the vertical or horizontal wave of a specific color setting is this slight difference in the geometric angle created by the lip on the disk.

THE SECOND VIRTUAL CONE

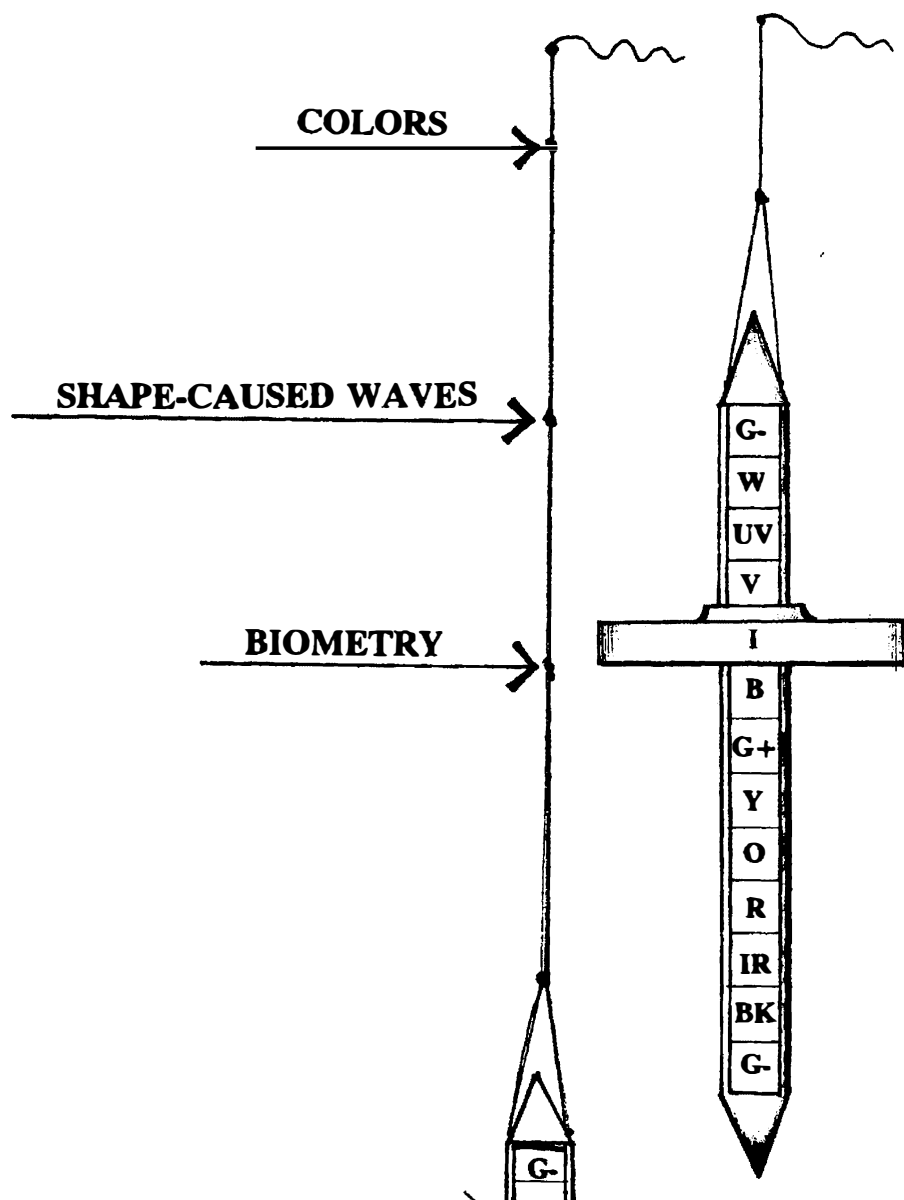

There is a second virtual cone inherent in the design of the VC pendulum. This second cone is formed between the point at which the suspending string is held and the top edge of the disk. This second cone interacts with the first cone described above; together they determine the precise geometrical relationship to the different vibrational frequencies tested. This means that it is vital to hold the string at the correct location to ensure correct readings.

Those using the two models of VC pendulum sold by The VESICA INSTITUTE will need to calibrate their pendulum by testing for placement of the three knots on the cord where the pendulum is held during testing (see the following section *How to Calibrate the Virtual Cone Pendulum* for more information). Following are the original French attributions for the three knots or markings on the cord:

1. The knot on the cord closest to the top of the pendulum is used for Biometry, health concerns, and finding the “Astral Wave” (the personal wave from astral impregnation which is set at birth and remains until death) for a person.
2. The middle knot is for dowsing the energies coming from geometrical forms, what the French called “energy of form” or “shape-caused waves”.
3. The topmost knot is for dowsing color frequencies, i.e. emissions of visible colors.

In practice, however, any of these three knots **will work** for any dowsing purpose. Each of these three knots is set at the **correct location** for accurate dowsing, but at three different octaves or harmonics of the scale. You may find it most comfortable to use the first or second knot for most dowsing, since reaction time is slower for the highest knot.

VIRTUAL CONE PENDULUM

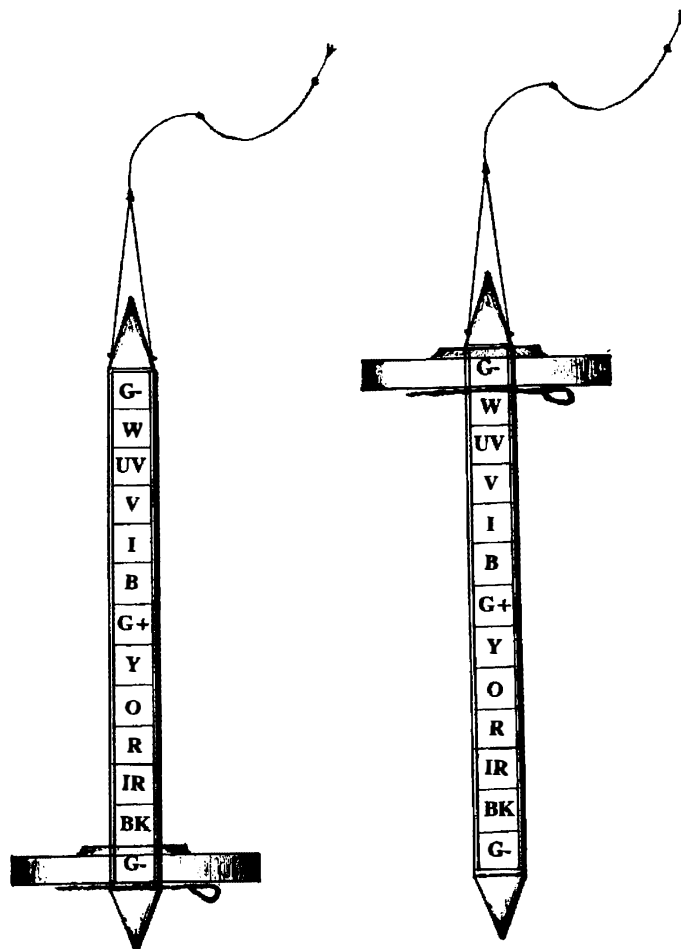

VIRTUAL CONE SETTINGS FOR DETECTING THE BG3

To set the VC to search for specific energies: Place the disk over the setting for the desired color or energy. Remember that the small projection of the disk is UP to detect HORIZONTAL waves and DOWN for VERTICAL waves.

SETTINGS FOR THE THREE KEY ENERGIES OF BIOGEOMETRY (The BG3)

A) BENEFICIAL HORIZONTAL WAVE OF NEGATIVE GREEN (H-G):

The disk can be placed over the -G setting at either the base of the pendulum or at the top of the pendulum; remember to have the small projection on the disk UP.

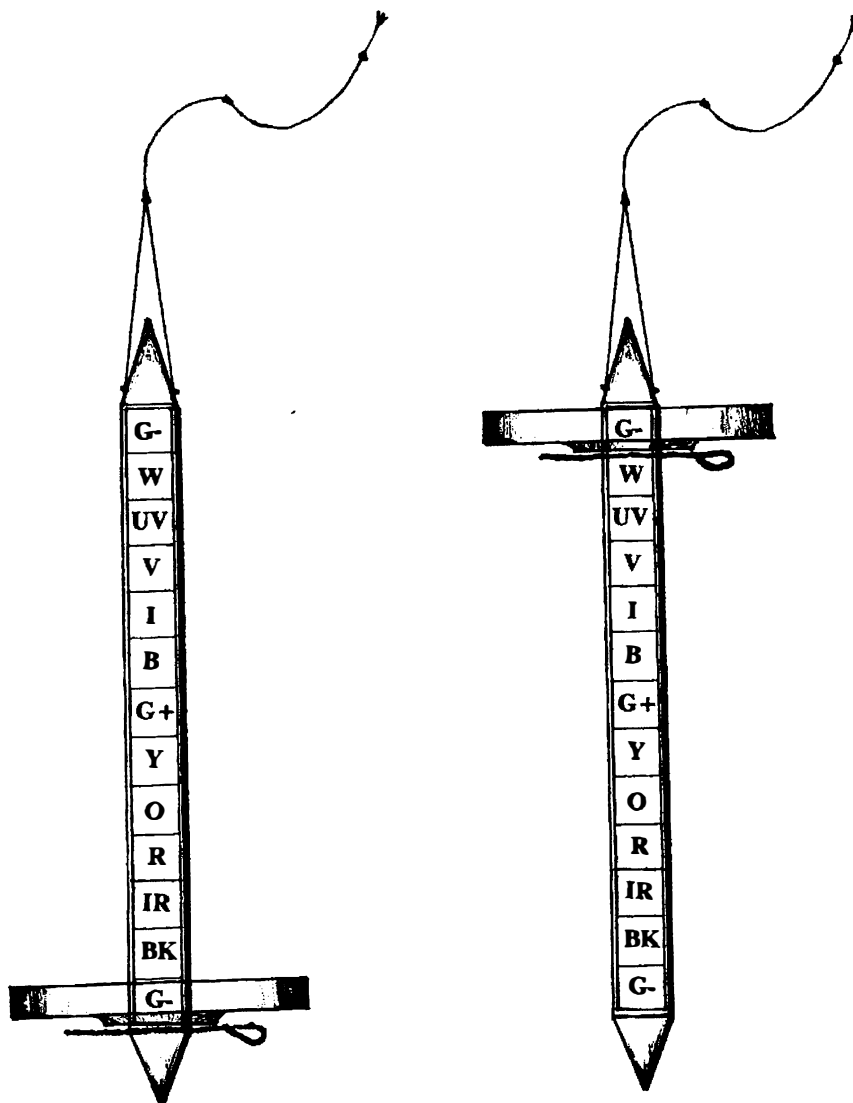

Virtual Cone Pendulums set for detection of HORIZONTAL Negative Green

B) DETRIMENTAL VERTICAL WAVE OF NEGATIVE GREEN (V-G):

The disk can be placed at the same positions as described for (A) above (over either -G location), but in this case the small projection on the disk must be DOWN.

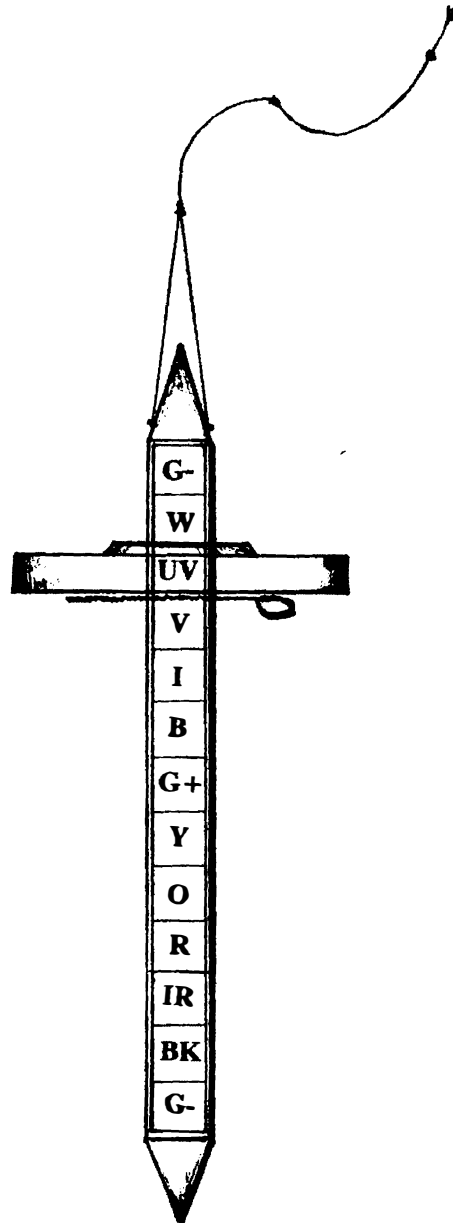

Remember the principle of RESONANCE discussed in the companion volume to this text. Restrict your dowsing of Vertical -G to the absolute minimum necessary, and always cleanse energetically afterward.

Virtual Cone Pendulums set for detection of VERTICAL Negative Green

C) BENEFICIAL HIGHER HARMONIC OF ULTRAVIOLET (HHUV):

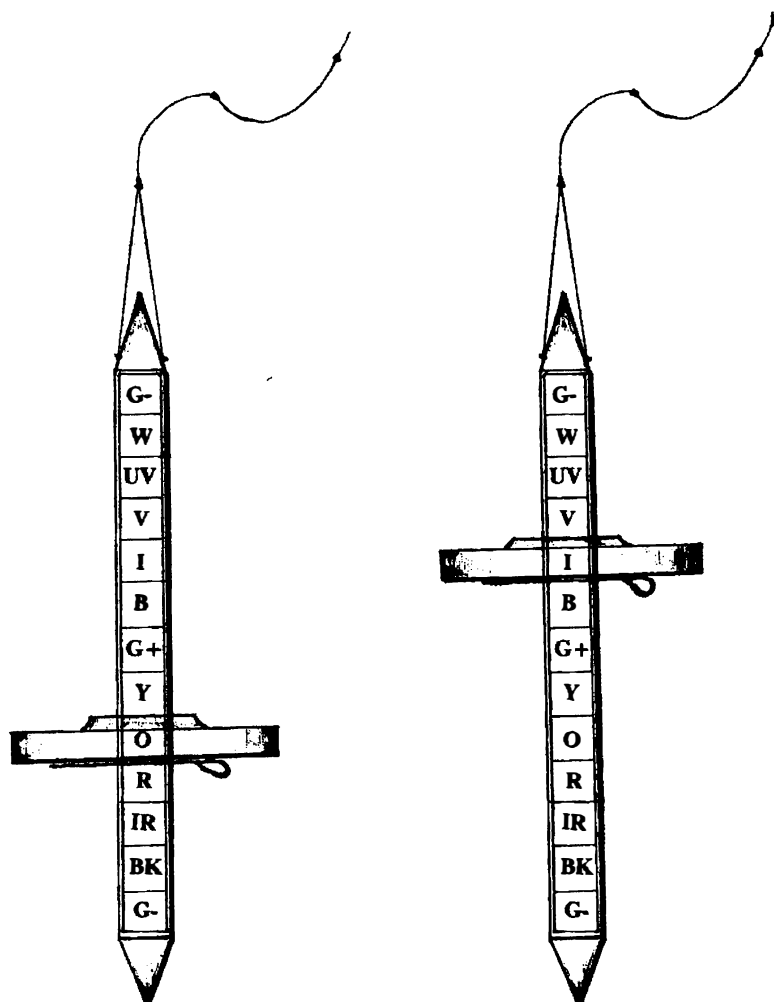

The disk is placed over the UV (Ultraviolet) setting. The small projection on the disk is UP.

Virtual Cone Pendulum set for detection of HHUV

D) BENEFICIAL HIGHER HARMONIC OF GOLD (HHG):

The disk can be placed over either the I (Indigo) setting or the O (Orange) setting. The primary is the Indigo setting, and it should be used, except in cases where the object being dowsed has Indigo color, and to avoid false positive reactions use the Orange setting.

Virtual Cone Pendulums set for detection of HHG

USING THE VIRTUAL CONE TO DETECT ENERGY-QUALITIES

1. Place the disk at the correct setting for the energy you wish to detect. Remember to check that the lip of the disk is UP for beneficial HORIZONTAL wave detection and DOWN for detrimental VERTICAL wave detection.

Any of the 12 different qualities of the spiritual vibration spectrum can be detected in either their horizontal or vertical wave component. Beginners please stay with the settings described earlier for the BG3 and V-G.

2. Hold the cord at one of the knots between thumb and forefinger. Hold the rest of the cord curled in the palm and secured by the other three fingers.

3. Suspend the VC over the object or space to be tested. Give it a push so that it swings into a straight back-and-forth movement. This is the SEARCH POSITION.

4. If the VC detects the energy it is set by the position of the disk to find, it will rotate CLOCKWISE. The amplitude of the swing and the rate of rotation show the intensity of the energy in that location. If the VC does not detect the energy, it will stay in Search Position with a back and forth swing.

5. In cases where it is not easy to suspend the VC over the object to be tested, one can use a pointer in the free hand to connect to the object to be tested. With practice, it will suffice to simply point to the object to be tested with one's finger, or at still higher levels of skill to simply look at it. The key is how finely tuned one's energetic system is to be able to create the proper vibrational link for accurate testing.

6. If the VC spins counterclockwise rather than clockwise when it detects energy, it may be that the location of the knots on the cord are incorrect. Read the section below on "How to Calibrate a Virtual Cone Pendulum" to learn how to establish the correct location for the knots. In certain cases, an individual's energy field may be reversed so that reaction to an energy results in a counter-clockwise spin rather than a clockwise spin of the VC.

VIRTUAL CONE PENDULUM REACTION PATTERNS

SPIN DIRECTION: For the VC the only reactions we are concerned with are:

A) A CLOCKWISE (CW) swing, showing the detection of the specific energy for which the disk is set, or

B) A back and forth motion, or the SEARCH POSITION. If the swing stays back and forth when over the item being dowsed, this means the energy sought is not present.

HOW TO CALIBRATE A VIRTUAL CONE PENDULUM

The Virtual Cone Pendulum used by the Egyptians is the larger of the two models now available, and a unique system for securing the disk is used.

Although most models of Virtual Cone Pendulums and all those sold by The VESICA INSTITUTE have knots already tied in the cord, there may be a circumstance in which you will need to determine the correct location for holding the cord of a VC to get accurate test results.

TO CALIBRATE THE VIRTUAL CONE PENDULUM:

1. For a good trial sample, dowse the clearing pattern printed in Section Six of this text, entitled "Biogeometry Clearing Pattern Plates". This pattern has strong emissions of the BG3, so that all three of these energies (H-G, HHUV, HHG) can be tested with it. Alternately one could use other items to dowse; the key is to use items that you know have an emission of particular energies.
2. Place the disk on the VC, lip up, over the setting for HHG (over either the O or the I).
3. Hold the first cord just above the top of the pendulum; let the pendulum hang freely over the clearing pattern (or other item being dowsed) with the rest of the cord curled in the palm.

4. Let the cord slip slowly through the fingers; it will start to rotate as it picks up the HHG vibration from the pattern. Continue to let the cord slip slowly through the fingers until you find the point on the cord where the CLOCKWISE rotation is strongest. Tie a knot in the cord at that place.
5. Return to dowsing the pattern. Continue to let the cord slip through the fingers past the first knot and find the second location (next octave) on the string where the clockwise rotation is strongest and tie another knot there.
6. Return to dowsing the pattern. Continue to let the cord slip through the fingers past the first two knots and find the third location (third octave) on the cord where the clockwise rotation is strongest and tie another knot there.
7. Confirm the locations where you tied the knots by changing the disk location to that for HHUV (over the UV setting on the Rod) with lip up. Repeat the protocol from the beginning; if you have calibrated correctly, the clockwise rotation of the pendulum for HHUV should also be greatest at the places where you have tied the knots. If not, recheck where you tied the cord on HHG.
8. If you care to, repeat the protocol with the disk set for -G (lip up); as with HHUV, the rotation for H-G should be greatest at the places the knots are tied.

This method of calibration can also allow you to use a Virtual Cone that has a different sized disk than that which was originally created for use on the same rod. The places on the VC cord that have the knots already tied were calibrated to a particular size disk. If the disk size changes, then logically the cone geometry created between base tip and bottom of the disk changes. However as described earlier two virtual cones show on the pendulum; one from the base to the lower edge of the disk, the other from the place where we hold the cord to the upper edge of the disk. By changing where we hold the cord and tie the knots, the resonance response of the VC can be adjusted.

HINTS ON USING THE DIFFERENT MODELS OF VIRTUAL CONE

The VESICA INSTITUTE carries two different models of VC:

Our top-of-the-line model is the one preferred by Dr. Karim and the Egyptian BioGeometers. This “professional” model is the most durable and easily adjusted to correct settings. It is constructed of clear lucite, making the letter of the setting clearly visible. A removable pin fits into small holes directly beneath each setting to secure the disk; the disk rests on the pin. This pin system makes it effortless to correctly position the disk, while the other model requires more attention to assure the disk’s correct height.

The additional model available is smaller in size, and made of clear Lucite. This “student” model features the side latch method of securing the disk. While there is no pin to lose, this method of setting the disk requires special care. The disk appears to “click” into position at the settings, but it must be moved so that the bottom of the disk is flush with the line at the bottom of each setting. This is true whether the lip is up and you are aligning the bottom of the flat side of the disk, or if the lip is down and you are aligning the bottom edge of the lip. The side latch can wear out due to excessive or careless use.

**FOUNDATION TRAINING IN
BIOGEOMETRY:
THE EGYPTIAN SCIENCE OF ENERGY**

**A PRACTICAL TRAINING IN BIOGEOMETRY WITH DR. ROBERT J. GILBERT
CERTIFIED AND AUTHORIZED BY DR. IBRAHIM KARIM**

BioGeometry is a modern form of the inner Temple Sciences used in Ancient Egypt, developed by Dr. Ibrahim Karim of Cairo. Much of what is taught in BioGeometry is simply unavailable from any other source, providing essential insights into the use of living energies for beneficial purposes. The 7-Day Foundation Training in BioGeometry provides everything needed to *understand, detect, measure, create, transform, and practically apply* vital energies which sustain life, health, and spiritual connection.

Graduates of the Foundation Training have practically applied BioGeometry methods in a wide range of fields: to support both conventional and alternative health care, environmental restoration, interior design, Feng Shui, agriculture, plant and animal care, architecture, landscape design, art & general design purposes, spiritual applications, and many more.

Dr. Gilbert is the first non-Egyptian ever to be granted certified Instructor status in BioGeometry. For the latest schedule of upcoming classes, and for a full syllabus detailing the topics and practical methods taught in each course, please see our website www.vesica.org or call us at (828) 298-7007.

Students may choose to simply attend the Foundation Training, or at their option they may then go on to attend advanced courses in BioGeometry taught directly by Dr. Ibrahim Karim. We will post information on these advanced trainings on www.vesica.org; also see www.biogeometry.com and www.biogeometry.org for more info on BioGeometry.

LEVEL ONE TRAINING (Two Days)

INTRODUCTION TO BIOGEOMETRY

This course provides an overview of the foundations of BioGeometry. Students learn key principles which make BioGeometry effective and which are essential to get the most from the practical applications and methods taught in the courses which follow. Details are also provided of important scientific and medical studies of BioGeometry which show its tremendous potential.

Topics include:

1. Ancient Egyptian methods of using spiritual energy.
2. Harmonics as the key to universal structure.
3. *Resonance* and creating practical energy effects.
4. Scientific and University studies of BioGeometry applications to benefit humans, animals, plants, and the environment.
5. Vibrational foundations of human health and consciousness.
6. The *Energy Key* and how the Ancient Egyptians applied it.
7. Illustrated Overview of European and Egyptian Research into Geometric Energy Fields.
8. The 12 Key energy qualities: their healing and harmful aspects.
9. The 3 components of spiritual energy fields.
10. The ‘Spiritual Carrier Wave’: How the Ancient Egyptians tapped its power.
11. Energy Alchemy: Transmuting toxic energies to beneficial energies.
12. How Geometric patterns affect the human energy field.

And many more...

LEVEL TWO TRAINING (Three Days)

BIOGEOMETRY ENERGY BALANCING & ANALYSIS

This hands-on course teaches fundamental practical methods used in BioGeometry. Essential skills covered in this course include how to detect, differentiate, measure and manifest the most important Energy Qualities. Students learn and practice a large number of effective techniques to balance and enhance vital energy qualities which affect the environment and human wellness, including methods to easily transmute toxic energies into beneficial ones. All methods are based on the direct measurement of the energy qualities being worked with, not on abstract principles or dogmatic assertions.

HANDS-ON SKILLS TAUGHT IN THIS COURSE INCLUDE:

1. Vibrational methods of analyzing energy fields.
2. How to detect and measure the 12 key energy qualities.
3. Calibrating energy analysis tools for maximum accuracy.
4. Analyzing energy emissions from shapes and Egyptian forms.
5. Three methods to detect the vital “Higher Harmonic of Gold” Energy field.
6. How to identify, detect, and clear, toxic energy impregnation and its effects.

7. Discerning between beneficial and detrimental energy qualities.
 8. Finding the energies generated by particular number qualities.
 9. Essential methods to clear our energy fields of detrimental energies.
 10. Multiple methods to create at will the three essential energies found in all spiritual energy fields (the 'BG3').
 11. Charting and transmuting detrimental Earth Energy Grids into beneficial energies.
 12. Transmuting toxic energies into beneficial energies through geometry or number qualities.
 13. Specific methods to transmute the toxic effects of Electro-Magnetic fields.
 14. How to transmit beneficial energies with the 'Spiritual Carrier Wave'.
 15. Classical Egyptian methods of canceling toxic energy emissions from Pyramid and Dome forms.
 16. Transmuting the toxic energies emitted from certain pictures and designs.
 17. Energy Balancing through color placement and object placement.
 18. Using the principle of rotation to create beneficial energy fields.
 19. Methods to energy balance hanging pictures and wall hangings.
- And many more...*

LEVEL THREE TRAINING (Two Days)

INTERMEDIATE ENERGY BALANCING: **BIOSIGNATURES & BIOGEOMETRY DESIGN**

This third and final level of the Foundation Training deepens and extends the student's ability to balance living energies. Methods to evaluate the energetic condition of the human energy field are taught, using anatomy charts and Vibrational Radiesthesia principles; analysis can take place at any level of structure from DNA up to organs and whole body systems (or at multiple levels of the subtle body). Hundreds of BioSignatures (copyrighted by BioGeometry Energy Systems and developed over 30 years by Dr. Ibrahim Karim) are given to the student, with a full exploration of techniques to apply the BioSignatures to benefit human energy conditions. The Principles of BioGeometry Design are also introduced, with multiple new practical applications taught.

TOPICS AND HANDS-ON SKILLS TAUGHT IN THIS COURSE INCLUDE:

1. Vibrational analysis of the human energy field through using charts of the physical and subtle bodies.
2. Applying BioSignatures to balance specific energy field conditions.
3. Modifying BioSignatures through BioNumerals for specialized effects.
4. Emergency methods of using BioSignatures.
5. How to analyze oneself for detrimental energy impregnation or conditions (and correcting them with BioSignatures).
6. Essential principles of BioGeometry Design; creating optimal energy in any space or location.
7. How to create 'virtual rotation' in static designs for optimal energy emission.

8. Nature's Design Secrets: Why 'sacred sites' generate spiritual energy fields.
 9. Energy secrets of the 'Golden Mean' Proportion.
 10. Clearing environmental problems with BioGeometry design.
- And many more...*

**FOR MORE INFORMATION OR THE LATEST SCHEDULE OF CLASSES,
SEE OUR WEBSITE WWW.VESICA.ORG OR CALL (828) 298-7007.**

Comments from Graduates of the BioGeometry Foundation Training

Below are direct quotes from the students who graduated the recent August 2003 Foundation Training. The professions of the individuals quoted below include: *Medical Doctor, Landscape Architect, Registered Nurse, Massage Therapist, College Professor, Meditation Instructor, Labyrinth Builders, Farmer, Psychologist, Hypnotherapist, Feng Shui Consultants, Cranio-Sacral Therapist, Computer Programmer, and Energy Healers of many different types.*

“Stunning – I couldn’t have imagined that the wisdom would be this cohesive and literally be the foundation of life itself... [This course was] Life-Changing, a must – a beginning to a new orientation of life.”

“Extremely high-quality, brilliantly organized and presented.”

“This is one of the deepest bodies of work that I have encountered thus far in energy/resonance work. It is very powerful and quickly effective. Great Tool to have in your Tool Box.”

“This course moves well beyond the simple channeling and manipulation of energy for healing, etc. We received the actual physical forms that can anchor the positive energy frequencies across dimensions.”

“[This training] Provides a foundation to all healing arts and would only enhance what you are already doing. It has brought a quality of peace and balance in my life that was not there before. It’s also very exciting to know there is much more to discover as our consciousness increases and the planet comes more into balance – Having a tool to bring balance and harmony to life has been a life long desire – Thank You!”

“BioGeometry has deepened my awareness of the way Nature creates and has given me practical tools to be in alignment with health, harmony, love, and service. With so much need on Earth now, we are blessed to have the truth and efficiency of BioGeometry.”

“Powerful and Easy to apply techniques for enhancing the quality of the environment, through the use of vibrational energy from color and shapes.”

“This is the NATURAL technology and science that supports, nourishes, renews, refreshes and regenerates all living things.”

“BioGeometry has a clarity and depth I wanted to add to my work with spaces, nature and design.”

“A challenging, rewarding, educational, enlightening, eye-opening GIFT of an experience that will allow for humankind to live Healthy and in Harmony with the world (universe) that we live in.”

“[The training] was extraordinary. Your clarity and commitment made it understandable. Repeating some of the important distinctions was also VERY helpful.”

“BioGeometry reveals core principles of life and our world that underlie and form foundations for spiritual traditions everywhere. One can test, detect, verify, and apply qualities of specific energies.”

“Fantastic... You will get the knowledge and experience you have been looking for all your life!”

“EXCELLENT... There are obviously some forces involved that are not being taught in Physics classes! I know... since I majored in Physics in College!”

“It’s the real Hogwarts. You think I’m kidding. Who else is teaching people to pay attention to energy, shape, form and function in such a way that an “everyday” kind of person can get it? Dumbledore lives!!!”

* “Robert, your teaching is great.”

* “Thank you ALL for a wonderful week and great presentation!”

* “I am leaving with a full brain and full heart. The training was clear, concise and presented with great respect for how the information was to be shared...”

* “Info presented extremely clearly and designed to “get you there.””

* “Thank you Robert and Elizabeth, for this gift beyond measure of your sharing. Thank you for all the time, commitment and focus to bring us these teachings.”

* “Training was very professional, well-organized”

* “High level techniques, as is the standard for Robert Gilbert”

* “Excellent – well organized and well articulated as usual for Robert”

* “Excellent Presentation. Still in awe of the mind of Robert Gilbert.”

* “It was thorough and detailed... I was amazed and grateful and felt so blessed to have been able to have Robert share the information.”

* “Thanks Robert and Elizabeth for the humor and blessings (and patience!).”

* “Very professional, well-organized and thought-out. Thank you for the excellent respect you give to Dr. Karim... It is so wonderful to find “grounded” techniques.”

* “Excellent, well-organized, well-integrated... I feel completely satisfied with your presentation of the course.”

GUIDELINES FOR BIOGEOMETRY RESOURCES

DEVELOPED BY DR. IBRAHIM KARIM

All BioGeometry Resources are imported direct from Dr. Karim's BioGeometry Center in Cairo, Egypt. All items are made on site in Egypt and tested for efficacy. For more information on BioGeometry, see Dr. Karim's website www.biogeometry.com.

The VESICA INSTITUTE makes the BioGeometry resources available as items of aesthetic and experimental interest; they are not medical items of any kind. No claims regarding medical applications of BioGeometry are made nor implied by The VESICA INSTITUTE. Any claims made by others regarding these items are the responsibility of the individuals making such statements, and are not necessarily the position of The VESICA INSTITUTE. Purchase of BioGeometry resources constitutes acknowledgement by the purchaser that they fully understand that these resources are aesthetic and experimental in nature and are in no way to be considered medical treatment nor diagnosis of any kind.

Dr. Karim has developed a number of guidelines for using his Resources, summarized below.

1. The BioGeometry resources are based on subtle energies and are not medical in nature. As such, experiences with them are not strictly predictable and will vary according to the individual.
2. The BioGeometry resources will impregnate with the user's energies when worn. This requires the metal items containing BioSignatures to be energetically cleared daily. This can be done by tapping the item's edge sharply on a hard surface (wood is ideal) several times. We also recommend putting them on a BioGeometry clearing plate when not in use.
3. Because worn BioGeometry items impregnate with the owner's energy, Dr. Karim is very specific in emphasizing that these items should only be used by that person without exception. Because of this, all sales of BioGeometry items are final. Be certain of the items you wish to purchase because no exchange or refund is possible. Thanks!
4. Some users experience a detoxification period when the BioGeometry items are worn. Reports from users indicate that most people enjoy the items' effects immediately; however, detox reactions vary according to the individual, and may occur on the energetic, emotional, or psychological level

Guidelines for The 'L' Pendant and Sticker

Higher Harmonic of Gold Emitter and Energy Transmutation Pattern

The 'L' is one of the most powerful and useful patterns in BioGeometry. It creates an intense emission of Higher Harmonic of Gold (HHG) and is a highly effective pattern to use in transmuting detrimental energies into beneficial energies. One such example would be transmuting the vertical wave of Negative Green into the beneficial Higher Harmonic of Gold energy.

Experimental Uses of the 'L' Pattern

Wear the 'L' as a pendant on the body for more HHG in the energy field and for added protection from detrimental energies in the environment.

The 'L' helps to cancel one highly detrimental aspect of the infrared segment of the 12-fold spectrum of vibrational energies.

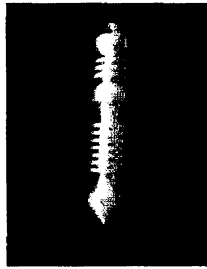

The 'L' stickers can be placed on electronic equipment or toxic earth energy lines to transmute their toxic vertical wave form energies to HHG.

Put an 'L' on the corners of mirrors to correct energy inversion.

Put an 'L' in the corner of a room to propagate HHG through the room. Be sure to dowse to confirm that it is working; never assume.

When wearing the 'L' pendant, arrange to have the short end pointing toward the heart as often as possible.

Guidelines for the Ibrahim Karim Universal Pendulum (IKUP)

Ibrahim Karim Universal Pendulum (IKUP) Geometric Energy Emitter & Spiritual Resonance Pendulum

This pendulum is sometimes referred to as the Ebony Pendulum because the majority of them produced are carved out of black ebony wood. All these pieces are individually made by hand so they may vary in their thickness, color, and in other ways. The most important quality is that of the energy carried; each piece does carry the correct energetic qualities. The IKUP was originally a personal design of Dr. Karim's for the pendulum that he regularly uses. After years of having people ask him where they could get a pendulum like his, he now makes them generally available. The IKUP emits the BG3 from its tip.

Experimental Uses of the IKUP

The IKUP has a pointed tip which concentrates the emission to a fine point like a laser beam. The IKUP is often worn as a pendant by its' owners so that its emissions and resonant geometries energize and support their subtle body and higher consciousness. Other reported uses of the IKUP by its developer and other users are similar to the Djed-Wadj, as follows:

It is used as an experimental 'healing stick' on any part of the body desired, particularly any energy centers of the body including iridology points in the eyes, acupuncture points, and reflexology zones. It can be placed directly over any injured or imbalanced area of the body. Again remember that its emissions are more concentrated to a point than the Djed-Wadj, making it highly effective for precision work, energizing and balancing acupuncture points and the like.

It can be placed over a chakra to open the chakra in a few seconds.

It can be held or rotated over food, drink, medicines, anything taken internally or put on the body, to imbue them with the BG3 and help balance toxic energies.

It is a highly sensitive pendulum for dowsing. It is an 'active emitter' type of pendulum which means it will help raise the energy of the user. In addition, its emission of the BG3 has a prophylactic effect that reduces the toxicity one absorbs when dowsing a toxic substance, making it a preferred tool for dowsing detrimental energies.

When the IKUP is used on any object or being for measurements or evaluation, it will charge them with the BG3 which will often lead to their energy becoming temporarily balanced. Because of this, be aware that it should not be used for evaluating the health or energy balance of a person or thing since its beneficial effect may 'mask' underlying energy imbalances which need to be detected. It is, however, an excellent tool to use for the eventual energy balancing work.

BIOGEOMETRY® RESOURCES AVAILABLE FROM THE VESICA INSTITUTE

All BioGeometry materials are special imports from Dr. Ibrahim Karim who holds international copyright on all BioGeometry designs.

Please note that stock availability and prices on these materials are variable depending on production conditions in Egypt. For this reason no prices are listed.

For current prices and availability, please contact The VESICA INSTITUTE:

Email: info@vesica.org
Phone: (828) 298-7007
FAX: (828) 298-4100

*All BioGeometry items are sold for research and/or ornamental purposes only.
No medical claims are made or implied.*

BIOGEOMETRY® MEDALLIONS AND JEWELRY

BioSignature Emitter Medallion – in bronze or sterling silver

Beautiful pendant has collection of human body BioSignatures and a variety of Divine BioSignatures. The same pattern is printed on both sides. 1 1/2 inch diameter available in Gold Toned Bronze, Oxidized Silver Tone and Red Tone.

Cartouche BioSignature Silver Pendant

Sterling Silver Pendant which offers a variety of the most important BioSignatures. Sleek design offers an elegant alternative to the regular BioSignature Pendant. 2 1/4 inches long and 1/2 inch wide.

BioSignature Adult Bracelet – in bronze or sterling silver

This beautiful bracelet has the human BioSignatures on one side and a variety of Divine BioSignatures on the other. 2 1/4 inch diameter.

BioSignature Child's Bracelet – Bronze

Smaller version of the adult bracelet. This item is optional for young children. 1 3/4 inch diameter.

BioSignature Round Design Clip – Sterling Silver

This beautiful clip can be used as a tie or money clip. The same human BioSignature patterns are on both sides. 1 1/2 inch diameter.

Earrings- Sterling Silver Divine Names

Sterling Silver Earrings. Square shaped with The Compellor and All Powerful Divine Names BioSignatures. 2 inches long.

Earrings - L Sterling Silver

Small “L”s designed to be worn as earrings. Creates a field of the 3 beneficial energy balancing qualities around the L patterns. 1 inch long in silver.

“L”Pendant— in gold toned metal or sterling silver

Worn to provide the BG3 (3 Energy Balancing Qualities) to the human energy field. 1 inch long.

Pendant- Divine Names (All Powerful)

This Pendant features the BioSignature which goes into resonance with particular energy manifestations related to the "All Powerful" Divine Name. The All Powerful or Al Quadir is known as "The One with the power to will anything." This pendant is used by Egyptian BioGeometers to increase Psychic Protection. 1 1/2 inches long in sterling silver.

Pendant- Divine Name (The Compellor)

This Pendant features the BioSignature which goes into resonance with particular energy manifestations related to the "Compellor" Divine Name. The Compellor or Al Gabbar is known as "the One who completes all that is lacking without any opposition." This pendant is used by Egyptian BioGeometers to increase Psychic Protection. 1 1/4 inches long in sterling silver.

Ring - Cartouche BioSignature

Sterling Silver Ring with a selection of important BioSignatures. One size (adjustable) fits most men's ring size. 1/2 inch wide.

PENDULUMS

Pendulum - Djed Wadj in Wood

Emanates the BG3 (3 Energy Balancing Qualities) from the base. Flat base allows Pendulum to be placed directly on or over a substance or witness to receive the BG3.

Pendulum - IKUP in Metal

Specially designed by Dr. Karim, this Pendulum creates Geometric Resonance with the 7 Spiritual Planes and emanates the BG3 from its pointed tip. Bronze Metal in a new 2" version.

Pendulum – BG3 in Metal

New design both emanates and detects the beneficial "BG3" energy quality. Dr. Karim developed this pendulum so that anyone (even those not trained in the full energy detection methods of BioGeometry) can easily detect the BG3 energy quality. Smaller 2" version.

Pendulum - Virtual Cone (Student Version)

Smaller, student model of the Virtual Cone. Secures the movable disk with a built-in spring pin. The Virtual Cone is essential to detect a variety of energy qualities.

Pendulum -Virtual Cone (Professional Version)

Larger, professional model of the Virtual Cone. Secures the movable disk with a removable pin. The Virtual Cone is essential to detect a variety of energy qualities.

OTHER BIOGEOMETRY® RESOURCES

“L’ Stickers- Clear Plastic Set

Clear Plastic “L” Stickers. 4 Pairs of 90 degree General Protection stickers and 4 Pairs of 66 degree Electro-Magnetic Protection stickers.

Stickers - Cell Phone

Used in BioGeometry to transmute Cellphone toxic energy. Set includes BioSignature patterns placed over the battery, and an 'L' pattern placed beneath the antenna.

Plate - Charging BioSignature 6"

This plate is imprinted with a large number of BioSignatures. Consumable items are placed on the plate before using them (drinks, food, medicines, etc.) so that the energy qualities of the BioSignatures will help to balance the energy of the substance. 6 inch diameter in silver toned metal.

Plate - Clearing in Gold Plate

Used for clearing your BioGeometry tools as well as jewelry and other objects. Plated in gold. 4 inches long.

BioGeometry® Home Kit

The BioGeometry® Energy-Balancing Home Kit is a simple and effective set of tools to provide BioGeometry® Energy-Quality Balancing for an average size home. It includes tools to harmonize the body's energy interactions with the energy fields of the electrical and water systems in the house, as well as with external electromagnetic radiation effecting the home environment. It also provides solutions for many energy disturbances caused by geopathic stress. The BioGeometry® Home Kit also harmonizes many disturbances arising from the architectural form and structure of the house.

CD - Silent Sound

Specially recorded by Dr. Ibrahim Karim, it broadcasts a variety of beneficial energy qualities but no audible sound. Contains 9 Tracks with different energy qualities. Because there is no audible sound, the CD can be played easily during meditation or sleep. Each CD must be recorded as an original master rather than duplicated in order to capture the BG effect. Comes with information booklet.

OTHER RESOURCES**Universal Pendulum – 4 Hemispheres**

This spherical emitter pendulum is available in wood or aluminum. This item is recommended for advanced users only.

SACRED GEOMETRY FOUNDATION TRAINING

Level One: Essential Background Teachings and Practices

THIS POWERFUL SEMINAR IS NOW AVAILABLE ON DVD!

Presented by Dr. Robert J. Gilbert

From the *Book of Genesis* to the *Da Vinci Code*, Sacred Geometry is known to be the sacred science of Creation. Sacred Geometry has been kept secret for thousands of years; only in the last twenty years has the general public even become aware of the existence of this profound treasure of knowledge. Every spiritual tradition around the world uses this Divine Science, which reveals the precise patterns Spirit uses to create the manifest and spiritual worlds.

Join Dr. Robert J. Gilbert, internationally known Sacred Geometry researcher & teacher, for the most concise and comprehensive introduction to this subject ever offered. Dr. Gilbert has compressed over 25 years of intensive research into this one-of-a-kind overview. This course reveals highly advanced spiritual principles taught to Initiates around the world, opening up vast new insights into the spiritual patterns that govern our lives.

A complete weekend seminar on high-quality digital DVD, this instructional course includes:

- * ***3 DVDs of essential information and previously hidden teachings*** (richly illustrated with hundreds of rare illustrations)
- * ***A hands-on Sacred Geometry Practices DVD*** (including classical drafting exercises taught step-by-step)
- * ***An experiential Inner Development Exercise DVD*** (with extensive explanation and commentary)
- * ***CD with the Inner Development meditation exercise*** (to be used for regular practice)
- * ***Instructional Book with over 100 pages of further information***, transcripts, and resource listing of rare texts and their content.

Just a few of the topics covered in this course include:

- * **From Egypt to the Holy Grail**; The Hidden History of Sacred Geometry
- * **The 5000 year old “Masters of the Net” tradition** of Spiritual Initiation
- * **Sacred Geometry in Modern Science**
- * **Key Principles for Powerful Practical Applications** of Sacred Geometry
- * **The Hidden Geometric Pattern of the Human Physical and Subtle Bodies**: Details of the “Coding System” taught in the Kabbalah & other Great Spiritual Traditions

SACRED GEOMETRY RESOURCES

The Beginners Guide to Constructing the Universe

This is a great book for those new and old to Sacred Geometry. It offers a fun journey through the numbers 1-10 (and their corresponding geometries) with lots of b&w illustrations and hands-on construction practices. Explores geometry in science, art, and our everyday world.

Zome Tool Explorer Kit

With Zome System, it's now easy to build domes, bridges, fractals, stars, crystals, DNA and buckyballs. Zome System has been a favorite of teachers, scientists and researchers for years. Now you too can experience the science of geometry by learning the concepts behind the structures. Learn the inner design of nature and build whatever your mind can conjure.

WESTERN SPIRITUAL TRADITIONS RESOURCES

Awakening The Third Eye

Clear, concise, safe and effective methods of developing spiritual perception and principles for understanding spiritual experiences. By Samuel Sagan.

How to Know Higher Worlds, Steiner

One of the best resources for those interested in Spiritual Initiation. Contains wonderful depth of esoteric teaching and practices from Rudolf Steiner, one of the 20th Century's most important spiritual teachers.

Introduction to Western Spiritual Tradition Video

Excerpted from the 6-part training series. Includes information on the seven stages of Initiation in the Classical, Holy Grail, and Rosicrucian Systems; the three stages of Spiritual Perception; and much more. Color VHS, approx. 2 hours.

Spiritual Initiation in the Western Spiritual Tradition

Collected Information from the Western Spiritual Tradition Seminars. Deep overview not available elsewhere of Rosicrucian esoteric knowledge and the work of Rudolf Steiner. By Robert J. Gilbert.

The Vesica Institute For Holistic Studies

1011 Tunnel Road, Suite 200

Asheville, NC 28805

(828) 298-7007

www.vesica.org

Located in the beautiful mountains of Asheville, North Carolina, the Vesica Institute offers cutting-edge training in ancient and modern holistic sciences. In addition to our live trainings and home study courses, we also stock a wide variety of rare resources.

If you would like to stay updated as to our latest resources, information, and training events regarding:

- BioGeometry
- Vibrational Energy Science & Radiesthesia
- Sacred Geometry
- Spiritual Science
- Holistic Healthy Homes

and other initiatives of The VESICA INSTITUTE, please register on our website www.vesica.org or send an email to info@vesica.org with a brief message informing us you would like to be added to our email list. Also keep an eye on our website www.vesica.org for latest updates.

Thank you.

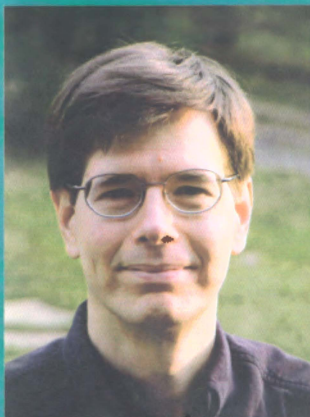

In the early 1930's, a group of French researchers made a remarkable discovery: The full spectrum of energies which create and sustain all life on Earth.

This knowledge had almost disappeared by the 1970's, when scientist Dr. Ibrahim Karim collected the archives of this research in Paris and returned to his native Cairo Egypt. Combining the French discoveries with his own breakthrough discoveries, Dr. Karim developed the new science of BioGeometry®. The incredible healing potential of this vibrational science has been validated in the scientific and medical research projects described in this text.

For the first time in the English language, this book includes rare details on:

- The 'Lost' Discoveries of French Vibrational Energy Researchers before World War II
- The Spectrum of Twelve Key Natural Energies
- The Three Essential Energy Qualities which Balance all Living Beings
- Vibrational Energy Research from the Egyptian National Research Centre
- The Breakthrough Method of BioGeometry® developed in Cairo Egypt by Dr. Ibrahim Karim
- Healing with BioSignatures®: Hidden Geometric Patterns of Energy Movement within the Human Body

Also includes: How to Test for Four Vital Energy Qualities using Egyptian BioGeometry® methods—an Illustrated 16-page Guide

Robert J. Gilbert Ph.D. has a multi-faceted background in both spiritual and scientific studies. He has worked in testing and balancing detrimental radiations and energy fields for over 25 years. A former U.S. Marine Corps Instructor in Nuclear-Biological-Chemical Warfare Survival, Dr. Gilbert has conducted independent research into the Geometric basis of modern science and new technologies since 1985. Dr. Gilbert holds the distinction of being the first non-Egyptian ever granted instructor status in BioGeometry®. He teaches and conducts research at the Vesica Institute for Holistic Studies, located in the beautiful mountains of Western North Carolina.
